

Chipsmall Limited consists of a professional team with an average of over 10 year of expertise in the distribution of electronic components. Based in Hongkong, we have already established firm and mutual-benefit business relationships with customers from,Europe,America and south Asia,supplying obsolete and hard-to-find components to meet their specific needs.

With the principle of "Quality Parts,Customers Priority,Honest Operation,and Considerate Service",our business mainly focus on the distribution of electronic components. Line cards we deal with include Microchip,ALPS,ROHM,Xilinx,Pulse,ON,Everlight and Freescale. Main products comprise IC,Modules,Potentiometer,IC Socket,Relay,Connector.Our parts cover such applications as commercial,industrial, and automotives areas.

We are looking forward to setting up business relationship with you and hope to provide you with the best service and solution. Let us make a better world for our industry!

**Insertion / Extractor Tool
Instruction Sheet
Order No. 11-03-0036
(HT-71800)**

For the removal of SL Modular Interconnection Product Wire-to-Wire and Wire-to-Board Terminal series in interim clips or panel mount modules, and both male and female crimp terminals.

TERMINAL EXTRACTION:

Individual terminals may be removed from the housing using this SL tool.

1. Push the terminal forward in the housing so that the locking tang is clearly visible. Using the tab labeled "M" on the SL tool, insert into the slot on the back of the housing and firmly depress the locking tang until the shoulder rests upon the housing.
2. Carefully pull the terminated wire out of the connector in the direction of the arrow in Figure 1.

Figure 1

LOCKING-TANG RESET:

Once the terminated wire is extracted, the locking tang will need to be repositioned in order to obtain retention in the housing.

1. Insert the probe of the SL tool under the depressed locking tang as shown in Figure 2.
2. Gently pivot the SL tool towards the I.D. slots until the tang is bent up into original position and the scribe line is parallel to the body of the terminal see Figure 3. Pull out the SL tool and the terminal now can be re-inserted into the housing.

Figure 2

Figure 3

TERMINAL EXTRACTION FROM INTERIM OR PANEL MOUNT CLIP:

Most of the interim clips have small slots either on the top or the bottom of the part depending on the size of the clip. Smaller clips less than 12 circuits have the slots on the bottom. (Figure 4 is oriented from the bottom.) If there are no slots for extraction, then housings must be removed from clip.

To extract terminals:

1. Push the terminal forward in the interim clip or module and the housing or so that the locking tang is clearly visible. Using the tab labeled "C" on the SL tool insert into the slot on the back of the clip. Firmly depress the locking tang.
2. Pull the terminated wire out in the direction of the arrow. See Figure 4.

Figure 4

HOUSING EXTRACTION:

This operation is used to remove a housing from an interim clip or panel mount clip.

1. Slide the SL tool under the plastic tab on the clip or panel mount and lift up. Carefully open only far enough to extract the housing.
2. Pull the housing out in the direction of the arrow. See Figure 2.
