### SET UP

This extraction tool can remove Picoflex™ connectors from 4 through 26 circuits, but it must be adjusted for the circuit size prior to operation.

To adjust the tool, remove the two thumbscrews from the adjustment block cover. Lift out the jaws and move them to the required position hole. See Figure 1.

**NOTE:** Each position hole covers two circuit sizes. That is, the innermost holes are for 4 and 6 circuit connectors. The next set of holes is for 8 and 10 circuit, and then the next is for 12 and 14 circuit, and so on.

Make sure the jaws are positioned equally from the middle of the tool. Put the adjustment block cover on and tighten the thumbscrews (finger-tight only).

Figure 1

### OPERATION:

**CAUTION:** Disconnect any electrical power from the circuit before using this tool.

To remove a connector from the header assembly, follow the steps below:

1. Open the tool slightly wider than the connector width.

2. Position the tool over the header. The header has a narrow end wall and a wider end wall. The tool has matching narrow and wide slots in the jaws. See Figure 2.
3. Close the tool jaws on the connector. Make sure the teeth in the jaws engage the slot on the connector. See Figure 3.

4. While keeping the jaws closed on the connector, squeeze the latch clamps until they stop against the sides of the tool jaws. This releases the header latches so the connector can be removed without latch damage. See Figure 3.
5. Holding the tool closed by the latch clamps, pull the tool straight up to remove the connector from the header. Damage may occur to the header or connector if it is extracted at an angle.

**Warning:** Care must be taken during this procedure to prevent bending of the pins that are left in place in the header assembly.

## Maintenance

1. Keep the tool clean and dry. For replacement parts, see Parts List.

**CAUTION:** Molex specifications are valid only when used with Molex connectors and tooling.
