

Chipsmall Limited consists of a professional team with an average of over 10 year of expertise in the distribution of electronic components. Based in Hongkong, we have already established firm and mutual-benefit business relationships with customers from,Europe,America and south Asia,supplying obsolete and hard-to-find components to meet their specific needs.

With the principle of “Quality Parts,Customers Priority,Honest Operation,and Considerate Service”,our business mainly focus on the distribution of electronic components. Line cards we deal with include Microchip,ALPS,ROHM,Xilinx,Pulse,ON,Everlight and Freescale. Main products comprise IC,Modules,Potentiometer,IC Socket,Relay,Connector.Our parts cover such applications as commercial,industrial, and automotives areas.

We are looking forward to setting up business relationship with you and hope to provide you with the best service and solution. Let us make a better world for our industry!

Mini-Mac Applicator Specification Sheet Order No. 63830-0000

FEATURES

- Quick set-up time; plus the crimp height, track and feed adjustments can be preset in applicator
- Conductor and insulation rings allow quick adjustment for conductor and insulation diameter change
- Applicator designed to industry standard mounting and shut height 135.80mm (5.346")
- Directly adapts to most automatic wire processing machines. Optimum terminal feed/indexing can be obtained with the optional terminal guide assembly, Order No. 63830-0120. See page 6.

* 8 AWG Hi-Flex wire (665 strands). This type of wire has very fine strands.
Please note: Extra precaution must be maintained during stripping operation to prevent loosening or breaking strands.
 Lost or broken strands may result in lower pull force strength and broken strands may cause a possible electric shock or shortage.

Pull Force should be measured with no influence from the insulation crimp.

The above specifications are guidelines to an optimum crimp.

Special Note:

Figure 1

1. Cut-off Tab length below 0.30mm may cause the box dimension to be under recommendation. See Figure 1.
2. Wire insulation should not be crimped and insulation grip area should be formed to contain wire strands only.
3. Changing the insulation height setting may be needed to achieve the dimensions of the insulation grip in Section A-A. See Figure 1.
4. If wire strands are missed from conductor crimps, the operator should place the wires in the terminal, in the correct location, without using the wire stop/ stripper for locating the wire.

OPERATION:

The Optional Terminal Guide Assembly helps to align slightly bent up or down terminals, entering the track. Recommended for use with wire processing equipment, or roughly handled terminal reels. To install the Optional Terminal Guide assembly follow the steps below.

- 1 Remove the M4 X 12 BHCS (2) from the existing rear cover (Part No. 63830-0113) on the applicator.
- 2 Remove the 63830-0113 rear cover.
- 3 Replace it with the 63830-0120 Optional Terminal Guide Assembly.
- 4 Replace the M4 X 12 BHCS (2).

NOTES

1. Molex recommends an extra perishable tooling kit be maintained at your facility.
2. Verify tooling alignment by manually cycling the press and applicator before crimping under power. Check that all screws are tight.
3. Slugs, terminals, dirt, and oil should be kept clear of work area.
4. Wear safety glasses at all times.
5. For recommended maintenance refer to the Mini-Mac Manual.

CAUTION: This applicator should only be used in a press with a shut height of 135.80 mm (5.346"). Tooling damage could result at a lower setting

CAUTION: To prevent injury, never operate this applicator without the guards supplied with the press or wire-processing machine in place. Reference the press or wire processing manufacturer's instruction manual.

CAUTION: Molex crimp specifications are valid only when used with Molex terminals, applicators and tooling.
