

Chipsmall Limited consists of a professional team with an average of over 10 year of expertise in the distribution of electronic components. Based in Hongkong, we have already established firm and mutual-benefit business relationships with customers from,Europe,America and south Asia,supplying obsolete and hard-to-find components to meet their specific needs.

With the principle of "Quality Parts,Customers Priority,Honest Operation,and Considerate Service",our business mainly focus on the distribution of electronic components. Line cards we deal with include Microchip,ALPS,ROHM,Xilinx,Pulse,ON,Everlight and Freescale. Main products comprise IC,Modules,Potentiometer,IC Socket,Relay,Connector.Our parts cover such applications as commercial,industrial, and automotives areas.

We are looking forward to setting up business relationship with you and hope to provide you with the best service and solution. Let us make a better world for our industry!

# 100395 Low Power 9-Bit ECL-to-TTL Translator with Registers

## General Description

The 100395 is a 9-bit translator for converting F100K logic levels to TTL logic levels. A HIGH on the output enable ( $\overline{OE}$ ) holds the TTL outputs in a high impedance state. Two separate clock inputs are available for multiplexing and system level testing.

The 100395 is designed with TTL 64 mA outputs for bus driving capability. All inputs have 50 k $\Omega$  pull down resistors. When the inputs are either unconnected or at the same potential, the outputs will go LOW.

## Features

- 64 mA  $I_{OL}$  drive capability
- 2000V ESD protection
- -4.2V to -5.7V operating range
- Registered outputs
- TTL outputs

## Ordering Code:

| Order Number | Package Number | Package Description  |
|--------------|----------------|--|
| 100395QC     | V28A           | 28-Lead Plastic Lead Chip Carrier (PLCC), JEDEC MO-047, 0.450 Square |

Devices also available in Tape and Reel. Specify by appending the suffix letter "X" to the ordering code.

**Note 1:** The "Absolute Maximum Ratings" are those values beyond which the safety of the device cannot be guaranteed. The device should not be operated at these limits. The parametric values defined in the Electrical Characteristics tables are not guaranteed at the absolute maximum rating. The "Recommended Operating Conditions" table will define the conditions for actual device operation.

**Note 2:** ESD testing conforms to MIL-STD-883, Method 3015.

**Note 3:** The specified limits represent the "worst case" value for the parameter. Since these values normally occur at the temperature extremes, additional noise immunity and guardbanding can be achieved by decreasing the allowable system operating ranges. Conditions for testing shown in the tables are chosen to guarantee operation under "worst case" conditions.

### Test Circuit

**Notes:**

$V_{CC} = 0V$ ,  $V_{CCA} = 0V$ ,  $V_{EE} = -4.5V$ ,  $V_{TTL} = +5V$ .

All unused outputs are loaded with 500Ω to GND. Decoupling capacitors are necessary in the test and end application environment. When  $V_{CC}$  and  $V_{CCA}$  are common to a single power plane, typically 0.0V, decouple  $V_{TTL}$  to that plane with one 0.01 μF capacitor.

**LIFE SUPPORT POLICY**

FAIRCHILD'S PRODUCTS ARE NOT AUTHORIZED FOR USE AS CRITICAL COMPONENTS IN LIFE SUPPORT DEVICES OR SYSTEMS WITHOUT THE EXPRESS WRITTEN APPROVAL OF THE PRESIDENT OF FAIRCHILD SEMICONDUCTOR CORPORATION. As used herein:

1. Life support devices or systems are devices or systems which, (a) are intended for surgical implant into the body, or (b) support or sustain life, and (c) whose failure to perform when properly used in accordance with instructions for use provided in the labeling, can be reasonably expected to result in a significant injury to the user.
2. A critical component in any component of a life support device or system whose failure to perform can be reasonably expected to cause the failure of the life support device or system, or to affect its safety or effectiveness.
