

Chipsmall Limited consists of a professional team with an average of over 10 year of expertise in the distribution of electronic components. Based in Hongkong, we have already established firm and mutual-benefit business relationships with customers from,Europe,America and south Asia,supplying obsolete and hard-to-find components to meet their specific needs.

With the principle of “Quality Parts,Customers Priority,Honest Operation,and Considerate Service”,our business mainly focus on the distribution of electronic components. Line cards we deal with include Microchip,ALPS,ROHM,Xilinx,Pulse,ON,Everlight and Freescale. Main products comprise IC,Modules,Potentiometer,IC Socket,Relay,Connector.Our parts cover such applications as commercial,industrial, and automotives areas.

We are looking forward to setting up business relationship with you and hope to provide you with the best service and solution. Let us make a better world for our industry!

InGaP HBT GAIN BLOCK MMIC AMPLIFIER, 0.7 -2.8 GHz

Typical Applications

The HMC789ST89E is ideal for:

- Cellular/4G
- Fixed Wireless & WLAN
- CATV, Cable Modem & DBS
- Microwave Radio & Test Equipment
- IF & RF Applications

Features

- High Output IP3: +42 dBm
- High Output P1dB: +25 dBm
- High Gain: 18 dB
- Single Supply: +5V
- 45% PAE @ +25 dBm Pout
- Industry Standard SOT89 Package

Functional Diagram

General Description

The HMC789ST89E is a high linearity GaAs InGaP HBT gain block MMIC operating from 0.7 to 2.8 GHz and packaged in an industry standard SOT89 package. Utilizing a minimum number of external components and a single +5V supply, the amplifier output IP3 can be optimized to +45 dBm. The high output IP3 and high gain make the HMC789ST89E ideal for use in PA driver & pre-driver applications in Cellular/4G and Fixed Wireless.

Electrical Specifications, $T_A = +25^\circ\text{C}$, $V_S = +5\text{V}$ [1]

Parameter	Min.	Typ.	Max.	Min.	Typ.	Max.	Min.	Typ.	Max.	Units
Frequency Range	810 - 960			1710 - 1990			2420 - 2700			MHz
Gain	17	18		12	13.5		10	11		dB
Gain Variation Over Temperature		0.01			0.01			0.01		dB / °C
Input Return Loss		12			12			10		dB
Output Return Loss		20			15			10		dB
Output Power for 1dB Compression (P1dB)	21	23.5		23	25		22	24		dBm
Saturated Output Power (Psat)		25.5			27			26		dBm
Output Third Order Intercept (IP3) [2]		42			42			42		dBm
Noise Figure		3.8			3.8			3.8		dB
Supply Current (Icq)		125	150		125	150		125	150	mA

[1] Specifications and data reflect HMC789ST89E measured using the respective application circuits for each designated frequency band found herein. Contact the HMC Applications Group for assistance in optimizing performance for your application.

[2] Two-tone output power of +10 dBm per tone, 1 MHz spacing.

Pin Descriptions

Pin Number	Function	Description	Interface Schematic
1	RFIN	This pin is DC coupled. Off chip matching components are required. See Application Circuit herein.	
3	RFOUT	RF output and DC Bias input for the amplifier. Off chip matching components are required. See Application Circuit herein.	
2, 4	GND	These pins & package bottom must be connected to RF/DC ground.

[2] Circuit Board Material: FR4

The circuit board used in this application should use RF circuit design techniques. Signal lines should have 50 Ohm impedance while the package ground leads and exposed paddle should be connected directly to the ground plane similar to that shown. A sufficient number of via holes should be used to connect the top and bottom ground planes. The evaluation board should be mounted to an appropriate heat sink. The evaluation circuit board shown is available from Hittite upon request.
