

Chipsmall Limited consists of a professional team with an average of over 10 year of expertise in the distribution of electronic components. Based in Hongkong, we have already established firm and mutual-benefit business relationships with customers from,Europe,America and south Asia,supplying obsolete and hard-to-find components to meet their specific needs.

With the principle of “Quality Parts,Customers Priority,Honest Operation,and Considerate Service”,our business mainly focus on the distribution of electronic components. Line cards we deal with include Microchip,ALPS,ROHM,Xilinx,Pulse,ON,Everlight and Freescale. Main products comprise IC,Modules,Potentiometer,IC Socket,Relay,Connector.Our parts cover such applications as commercial,industrial, and automotives areas.

We are looking forward to setting up business relationship with you and hope to provide you with the best service and solution. Let us make a better world for our industry!

FOC-M12-MNNA-TC...

M12 FO transceivers

Data sheet

© PHOENIX CONTACT 2015-01-28

1 Description

The FO transceiver is available in two versions.

- **FOC-M12-MNNA-TC-1300** for applications with 50/125 μm , 62.5/125 μm or 200/230 μm fibers
- **FOC-M12-MNNA-TC-650** for applications with 980/1000 μm fibers

The FO transceiver features a high-speed transmitter and receiver circuit with a 1310 nm or 650 nm optical wavelength at high optical power. This makes the M12 transceiver an ideal alternative in data transmission systems with fiber optics.

An I²C interface ensures that the transceiver is efficiently monitored and managed.

Due to the high data transmission rate of 125 Mbps, the optical characteristics, and connection technology for the fiber optics, the M12 transceiver offers a wealth of application options:

- Optical networks
- Fast Ethernet
- Industrial electronics
- Power electronics

1.1 Properties

- 125 Mbps
- +3.3 V power supply
- PECL inputs/outputs
- Signal Detect (SD) output
- I²C management interface
- Metal housing
- Pin connector pattern in accordance with 61754-27
- Ambient temperature: -40°C... +85 °C
- RoHS-compliant

FOC-M12-MNNA-TC-1300

- 1310 nm wavelength
- -19 dBm output power (50/125 μm)
- -30 dBm receiver sensitivity
- Suitable for 50/125 μm , 62.5/125 μm and 200/230 μm

FOC-M12-MNNA-TC-650

- 650 nm wavelength
- -4 dBm output power (980/1000 μm)
- -20 dBm receiver sensitivity
- Suitable for 980/1000 μm

To optimize transmission performance and to achieve the maximum transmission path, correctly pre-assembled fiber optic connectors are required.

Loads that exceed the specified limit values can cause permanent damage to the component. The limit values represent the load limits of the component.

Make sure you always use the latest documentation.

3 Limit values

Loads that exceed the limit values can cause permanent damage to the component. The limit values represent the load limits of the component.

Continuous operation with these values is not recommended, as this may jeopardize the reliability of the component.

The FO transceiver, connectors, and couplings should only be mounted finger tight.

Limit values

Operating temperature	-40 °C ... +85°C
Storage temperature	-40 °C ... +100°C
Soldering temperature 2 mm from housing, t ≤ 5 s	260°C
Supply voltage	4 V
Data input voltage	-0.5 V ... 4 V
Differential input voltage	2 V (peak-to-peak with FOC-M12-MNNA-TC-1300)

7 Notes

Mounting

The FO transceiver, connectors, and couplings should only be mounted finger tight.

Achievable transmission paths

FOC-M12-MNNA-TC-1300 is designed for 50/125 µm fibers. The maximum achievable transmission paths are 2500m.

FOC-M12-MNNA-TC-650 is designed for 980/1000 µm fibers. The maximum achievable transmission paths are 75m.

To optimize transmission performance and to achieve the maximum transmission path, correctly pre-assembled fiber optic connectors are required.

8 External wiring

NOTE: To optimize the function of the transceiver, a decoupling of the supply voltage and a cable termination is required as shown in Figure 4.

NOTE: The decoupling capacitors and termination resistors should be as close as possible to the inputs of the transceiver or the LVPECL receiver.
