

Chipsmall Limited consists of a professional team with an average of over 10 year of expertise in the distribution of electronic components. Based in Hongkong, we have already established firm and mutual-benefit business relationships with customers from,Europe,America and south Asia,supplying obsolete and hard-to-find components to meet their specific needs.

With the principle of "Quality Parts,Customers Priority,Honest Operation,and Considerate Service",our business mainly focus on the distribution of electronic components. Line cards we deal with include Microchip,ALPS,ROHM,Xilinx,Pulse,ON,Everlight and Freescale. Main products comprise IC,Modules,Potentiometer,IC Socket,Relay,Connector.Our parts cover such applications as commercial,industrial, and automotives areas.

We are looking forward to setting up business relationship with you and hope to provide you with the best service and solution. Let us make a better world for our industry!

PROPER USE GUIDELINES

Cumulative Trauma Disorders can result from the prolonged use of manually powered hand tools. Hand tools are intended for occasional use and low volume applications.

Figure 1

1. INTRODUCTION

Extraction Tool 1804030-1 is designed to remove pin and socket contacts from Universal MATE-N-LOK connectors (refer to Instruction Sheet 408-7714) and Universal MATE-N-LOK II connectors (refer to Instruction Sheet 408-3200).

NOTE  Dimensions in this instruction sheet are in millimeters [with inches in brackets]. Figures and illustrations are for reference only and are not drawn to scale.

2. DESCRIPTION

The extraction tool features an extraction tip, an interlock lever, and handle. The extraction tip is designed to enter the contact cavity at the mating face of connector and release the contact from the connector. When the extraction tip is bottomed, and the handle is pushed toward the connector, a plunger within the handle pushes the contact free from the connector.

3. EXTRACTION PROCEDURE

1. For the Universal MATE-N-LOK connector, grasp the wire of the contact to be removed, and push it toward the mating end of the connector to release the contact locking lances. Hold in place. For the Universal MATE-N-LOK II connector, move the rear housing latch to the pre-stage position.
2. Depress, and hold the interlock lever. Insert the extraction tip into the contact cavity of the contact to be removed, and slide it over the contact. Refer to Figure 1.
3. For the Universal MATE-N-LOK connector, (while pushing the wire toward the tool) continue to insert the extraction tip until it bottoms. For the Universal MATE-N-LOK II connector, continue to insert the extraction tip until it rests on the retention shoulder of the contact.
4. Release the interlock lever, and push the tool handle FULLY; thereby, pushing the contact slightly out of the wire end of the connector.

5. Pull the wire until the contact is out of the connector.

NOTE If the extracted contact is **NOT** damaged, it may be re-inserted. For a contact removed from a Universal MATE-N-LOK connector, the locking lances **MUST** be reset to their original position as shown in Figure 2. **DO NOT** re-use a defective or damaged contact.

4. MAINTENANCE AND INSPECTION

The extraction tool should conform to the dimensions given in Figure 3. It is recommended that the tool be inspected upon arrival and at regularly scheduled intervals thereafter to ensure that the tool has not become damaged during handling.

For customer repair service, call 1-800-526-5136.

Universal MATE-N-LOK
