

Chipsmall Limited consists of a professional team with an average of over 10 year of expertise in the distribution of electronic components. Based in Hongkong, we have already established firm and mutual-benefit business relationships with customers from,Europe,America and south Asia,supplying obsolete and hard-to-find components to meet their specific needs.

With the principle of “Quality Parts,Customers Priority,Honest Operation,and Considerate Service”,our business mainly focus on the distribution of electronic components. Line cards we deal with include Microchip,ALPS,ROHM,Xilinx,Pulse,ON,Everlight and Freescale. Main products comprise IC,Modules,Potentiometer,IC Socket,Relay,Connector.Our parts cover such applications as commercial,industrial, and automotives areas.

We are looking forward to setting up business relationship with you and hope to provide you with the best service and solution. Let us make a better world for our industry!

### 1 Description

#### STEP POWER power supply units – for building automation

The new STEP POWER generation of compact power supply units is particularly suitable for installation distributors and flat control panels thanks to its design. The power supply units are available with 24 V DC output voltage in various performance classes and widths and with the special voltages 5, 12, 15 and 48 V DC. Their high degree of efficiency and the low standby losses make for high power efficiency.

### Features

- Easy assembly on the DIN rail or panel
- Maximum energy efficiency thanks to low idling losses
- Quick startup with LED function monitoring
- High operating safety due to long mains buffering under full load and high MTBF (> 500,000 h)
- Can be used worldwide in all industrial sectors due to a wide-range input and an international approval package
- Wide temperature range of -25°C to +70°C
- Parallel connection possible for increased performance and redundancy
- Powerful in its particularly slim design (18 mm)

#### DANGER OF EXPLOSION!

Only remove equipment when it is disconnected and not in the potentially explosive area.

#### DANGER

The device contains dangerous live elements and high levels of stored energy. Never carry out work when the power is turned on.

Make sure you always use the latest documentation. It can be downloaded from the product at [phoenixcontact.net/products](http://phoenixcontact.net/products).

### 3 Ordering data

Description	Type	Order No.	Pcs. / Pkt.
DIN rail power supply unit 5 V DC/2 A, primary-switched, single-phase.	STEP-PS/ 1AC/5DC/2	2320513	1

### 4 Technical data

Input data	
Nominal input voltage range	100 V AC ... 240 V AC
AC input voltage range	85 V AC ... 264 V AC
DC input voltage range	95 V DC ... 250 V DC
AC frequency range	45 Hz ... 65 Hz
DC frequency range	0 Hz
Current consumption	0.2 A (120 V AC) 0.13 A (230 V AC)
Inrush current limitation	< 15 A
$I^2t$	< 0.1 A <sup>2</sup> s
Power failure bypass	> 25 ms (120 V AC) > 110 ms (230 V AC)
Typical response time	< 0.5 s
Protective circuit	Transient surge protection Varistor
Input fuse, integrated	1.25 A (slow-blow, internal)
Output data	
Nominal output voltage	5 V DC $\pm$ 1%
Output current	2 A (-25 °C ... 40 °C permanent) 2.2 A (-25°C ... 55°C) 3.7 A (maximum output current)
Efficiency	> 81 % (for 230 V AC and nominal values)
Residual ripple	< 50 mV <sub>PP</sub>
Connection in parallel	Yes, for redundancy and increased capacity
Connection in series	Yes
Protection against surge voltage on the output	< 10 V DC
Power consumption	
Maximum power dissipation NO-Load	< 0.4 W
Power loss nominal load max.	< 2.6 W
LED status indicator	
Status display	"DC OK" LED green / U <sub>OUT</sub> > 4 V: LED is lit

**General data**

Insulation voltage input/output	4 kV AC (type test) 3.75 kV AC (routine test)
Insulation voltage input / PE	3.5 kV AC (type test) 2 kV AC (routine test)
Insulation voltage output / PE	500 V DC (routine test)
Degree of protection	IP20
Protection class	II (in an enclosed control cabinet)
MTBF (IEC 61709)	500000 h
Housing material	polycarbonate
Foot latch material	Plastic POM
Dimensions W / H / D (state of delivery)	18 mm / 90 mm / 61 mm
Weight	0.1 kg

**Ambient conditions**

Ambient temperature (operation)	-25 °C ... 70 °C (> 55° C derating)
Ambient temperature (storage/transport)	-40 °C ... 85 °C
Max. permissible relative humidity (operation)	≤ 95 % (at 25 °C, no condensation)
Vibration (operation)	< 15 Hz, amplitude ±2.5 mm (according to IEC 60068-2-6) 15 Hz ... 150 Hz, 2.3g, 90 min.
Shock	30 g in each direction, according to IEC 60068-2-27
Pollution degree in acc. with EN 50178	2
Climatic class	3K3 (in acc. with EN 60721)

**Standards**

Electrical Equipment for Machinery	EN 60204 / Surge voltage category III
Electrical safety (of information technology equipment)	IEC 60950-1/VDE 0805 (SELV)
Electronic equipment for use in electrical power installations	EN 50178/VDE 0160 (PELV)
SELV	IEC 60950-1 (SELV) and EN 60204 (PELV)
Safe isolation	DIN VDE 0100-410 DIN VDE 0106-1010
Protection against electric shock	DIN 57100-410
Protection against electric shock, basic requirements for safe isolation in electrical equipment	DIN VDE 0106-101
Limitation of mains harmonic currents	EN 61000-3-2

**Approvals**

UL approvals	UL/C-UL listed UL 508 UL/C-UL Recognized UL 60950 NEC Class 2 as per UL 1310
--------------	--

**Conformance with EMC Directive 2004/108/EC****Noise immunity according to EN 61000-6-2**

## 5 Structure

- 1 AC input
- 2 DC output
- 3 "DC OK" LED, green
- 4 Universal snap-on foot for EN DIN rails and for wall mounting

	[mm <sup>2</sup> ]		AWG	[Nm] Torque
	solid	stranded		
Input	0.2 - 2.5	0.2 - 2.5	24 - 12	0.6 - 0.8
Output	0.2 - 2.5	0.2 - 2.5	24 - 12	0.6 - 0.8

### Input data

Nominal input voltage range	100 V AC ... 240 V AC
AC input voltage range	85 V AC ... 264 V AC
DC input voltage range	95 V DC ... 250 V DC
AC frequency range	45 Hz ... 65 Hz
DC frequency range	0 Hz
Input fuse, integrated	1.25 A (slow-blow, internal)
Connection method	Screw connection
Stripping length	6.5 mm

### Output data

Nominal output voltage	5 V DC $\pm$ 1%
Output current	2 A (-25 °C ... 40 °C permanent) 2.2 A (-25 °C ... 55 °C) 3.7 A (maximum output current)
Connection method	Screw connection
Stripping length	6.5 mm

## 6 Block diagram

## 7 Safety notes

### **DANGER OF EXPLOSION!**

Only remove equipment when it is disconnected and not in the potentially explosive area.

### **DANGER**

The device contains dangerous live elements and high levels of stored energy.  
Never carry out work when the power is turned on.

### **WARNING:**

Before startup please ensure:

The mains connection has been carried out by a competent person and protection against electric shock is guaranteed!

The device can be disconnected outside the power supply unit in accordance with the regulations as in EN 60950 (e.g. through primary side line protection)!

All feed lines are sufficiently protected and dimensioned!

All output lines are dimensioned according to the maximum output current of the device or separately protected!

Sufficient convection must be guaranteed.

### **CAUTION:**

The power supply units are built-in devices. The device may only be installed and put into operation by qualified personnel. The corresponding national regulations must be observed.

## 8 Installation

### NOTE:

In order to ensure sufficient convection, we recommend a minimum vertical distance of 30 mm to the other devices.

The power supply unit can be snapped onto all DIN rails as per EN 60715; it can also be mounted on walls. The device must be mounted vertically (connecting terminals above or below).

## 9 Mounting position

## 10 Mounting on DIN rails

### Assembly

To mount on an EN DIN rail, snap the device straight onto the DIN rail.

If the power supply unit is to be fastened directly onto an even surface, press the orange base latch upward and down.

Place a washer between the pulled-out base latch and the even surface (max. outer diameter 8.5 mm, max. thickness 1.3 mm, e.g., spring washer for M4 in acc. with DIN 127-B or toothed lock washer in acc. with DIN 6797).

Then fasten the device with two screws (max. thread diameter 4 mm, max. head diameter 8.5 mm).

### Removing

To dismantle from the EN DIN rail, press the orange base latch outward and pull the device off of the DIN rail.

In the case of wall mounting, loosen the screws and press the base latch inwards again.

## 11 Connection to various systems

The 100 V AC ... 240 V AC connection is made using the L and N screw connections.

The device can be connected to 1-phase AC networks or to two of the phase conductors of three-phase systems (TN, TT or IT networks in acc. with VDE 0100-300/IEC 60364-3) with nominal voltages of 100 V AC ...240 V AC.

For operation on two of the phase conductors of a three-phase system, an isolating facility for all poles must be provided.

## 12 Input

**CAUTION:**

If an internal fuse is triggered, there is a device malfunction. In this case, the device must be inspected in the factory.

**Protection of the primary side**

The device must be installed in acc. with the regulations as in EN 60950. It must be possible to disconnect the device using a suitable isolating facility outside the power supply. The primary side line protection, for example, is suitable. For device protection, there is an internal fuse. Additional device protection is not necessary.

**Permissible backup fuse for mains protection**

Power circuit-breaker 6 A, 10 A or 16 A, characteristic B (or identical function). Connect a suitable fuse upstream for DC applications!

## 13 Output

**CAUTION:**

Make sure that all output lines are dimensioned according to the maximum output current or are separately protected. The cables on the secondary side must have sufficiently large cross sections in order to keep the voltage drops on the lines as low as possible.

The connection is established via the “+” and “-” screw connections on the screw connection of the DC output. The output voltage set on delivery is 5 V DC.

**Protection of the secondary side**

The device is electronically protected against short-circuit and idling. In the event of a malfunction, the output voltage is limited to 10 V DC.

## 14 Signaling

The "DC OK" LED enables evaluation of the function of the power supply directly on site.

	State 1	State 2
"DC OK" LED	ON	OFF
Cause	Output voltage > 3.7 V	Output voltage < 3.7 V or no voltage at the output
Meaning	Output voltage and output current OK	The device is in operation, but there is a fault in the consumer, the current consumption is greater than $I_1$ or the output is short-circuited. The device is out of operation because there is no mains voltage, the fuse on the primary side has been triggered, or the device is faulty.

## 15 Function

### Output characteristic curve

The power supply works with a power reserve as shown in the U/I characteristic curve in the figure. At ambient temperatures  $T_{AMB} < +40\text{ °C}$ ,  $I_1$  is available continuously. At higher temperatures, it is available for a few minutes. In the event of a secondary-side short-circuit or overload, the output current is limited to  $I_{MAX}$ . Thereby, the module does not switch off, but rather supplies a continuous output current. The secondary voltage is reduced here until the short-circuit is eliminated. The U/I characteristic curve with the power reserve ensures that both high inrush currents of capacitive loads as well as loads with DC/DC converters in the primary circuit can be supplied.

$$U_N = 5\text{ V}$$

$$I_N = 2\text{ A}$$

$$P_N = 10\text{ W}$$

$$I_1 = 2.2\text{ A}$$

$$P_1 = 11\text{ W}$$

$$I_{MAX} = 3.7\text{ A (} U_{OUT} = 0\text{ V)}$$

### Thermal behavior

With an ambient temperature of up to +55°C, the device supplies the continuous output current of  $I_N$ . In the case of ambient temperatures above +55°C, the output current must be reduced by 2.5% per Kelvin increase in temperature. The device does not switch off at ambient temperatures of +70°C or thermal overload. The output capacity is reduced as far as necessary to provide device protection. After it has cooled down, the output capacity is increased again.

### Parallel operation

Devices of the same type can be connected in parallel to increase both redundancy and power. By default upon delivery, no further adjustments are required. If the output voltage is adjusted, a uniform distribution of power is guaranteed by setting all parallel operated power supply units to exactly the same output voltage. To ensure symmetrical current distribution we recommend that all cable connections from the power supply unit to the busbar are the same length and have the same cross section. Depending on the system, for parallel connection of more than two power supplies a protective circuit should be installed at each individual device output (e.g., decoupling diode, DC fuse or circuit breaker). This prevents high return currents in the event of a secondary device fault.

### Redundant operation

Redundant circuits are suitable for the supply of systems which make especially high requirements on the operational safety. If a fault occurs in the primary circuit of the first power supply unit, the second device automatically takes over the entire power supply, without interruption, and vice versa. For this reason, the power supply units to be connected in parallel are dimensioned in such a way that the total current requirement of all consumers can be completely covered by one power supply unit. 100% redundancy makes external decoupling diodes necessary (QUINT-DIODE/40, Order No. 2938963)!

### Increased performance

For  $n$  parallel connected devices, the output current can be increased to  $n \times I_N$ . Parallel connection for increasing power is used when extending existing systems. A parallel connection is recommended if the power supply unit does not cover the current consumption of the most powerful load. Otherwise, the load should be divided between individual devices that are independent from one another.
