

Chipsmall Limited consists of a professional team with an average of over 10 year of expertise in the distribution of electronic components. Based in Hongkong, we have already established firm and mutual-benefit business relationships with customers from,Europe,America and south Asia,supplying obsolete and hard-to-find components to meet their specific needs.

With the principle of “Quality Parts,Customers Priority,Honest Operation,and Considerate Service”,our business mainly focus on the distribution of electronic components. Line cards we deal with include Microchip,ALPS,ROHM,Xilinx,Pulse,ON,Everlight and Freescale. Main products comprise IC,Modules,Potentiometer,IC Socket,Relay,Connector.Our parts cover such applications as commercial,industrial, and automotives areas.

We are looking forward to setting up business relationship with you and hope to provide you with the best service and solution. Let us make a better world for our industry!

## 1. Theory of operation

RA x 8 x 12 x 2 Receiver is a high end micro size receiver specifically designed for mobile phone and other applications where high quality sound is needed and only very little space for components is available.

# 2403 260 00031

## 2. Mechanical Layout and Dimensions

### 2.1. Main Dimensions

# 2403 260 00031

## 2.2. PWB Layout

## 2.3. Pick and place layout

# 2403 260 00031

## 2.4. Spring Force

# 2403 260 00031

## 2.5. Part Marking/Labeling

The samples have a serial number on bottom (pot) side

# 2403 260 00031

## 2.6. Force on component

FORCES ON DIFFERENT STATE OF COMPONENT			
STATE	MIN. SURFACE OF PREASURE [mm <sup>2</sup> ]	MAX PERMANENT FORCE [N]	MAX HANDLING FORCE [N]
FROM FRONT TO BACK (Basket)	-	10	15
FROM SIDE 1 TO SIDE 1	3	10	15
FROM SIDE 2 TO SIDE 2	10	10	15
POT	-	0	3
MEMBRANE	-	0	0
PULL OF FORCE (COVER/BASKET)	-	0	5

2403 260 00031

## 2.7. Material List

- |                          |                         |
|--------------------------|-------------------------|
| 1. Material of basket:   | Polycarbonate           |
| 2. Material of membrane: | Polyarylate-Compound    |
| 3. Material of pot:      | soft magnetic Iron      |
| 4. Material of magnet:   | Nd Fe B                 |
| 5. Material of contact   | CrNi-Steel, gold plated |
| 6. Material of cover:    | CrNi-Steel              |
| 7. Dimensions:           | 12x8x2.0mm              |
| 8. Mass:                 | 0.55g                   |

# 2403 260 00031

## 3. Electrical and Acoustical Specifications

### 3.1. Frequency response

Typical frequency response measured on baffle according to chapter 3.4  
(distance  $d = 1\text{cm}$ ,  $p = 5\text{mW}$ , without back cavity)

Tolerance window				
f [Hz]	lower limit [dB SPL]	upper limit [dB SPL]	f [Hz]	upper limit [%THD]
100	61	78	300	40
300	-	92	400	20
400	85	-	600	5
500	--	92	6300	5
1000	82	88		
3000	82	88		
6000	87	97		
7000	72	-		
8000	-	97		
10000	72	87		

# 2403 260 00031

## 3.2. Electro-Acoustic Parameters

Loudspeaker mounted in adapter acc. to 3.6.

1. Rated impedance	Z:	32Ω
2. Voice coil resistance	R:	28.8Ω±10%
3. Resonance frequency (measured @5mW)	f <sub>0</sub> :	350Hz±15%
4. Maximum usable excursion x <sub>max</sub>	p-p:	0.34mm p-p
5. Nominal characteristic sensitivity (calculated for 1W in 1m) average from 1kHz to 3kHz		68±2dB
5.1. Measured characteristic sensitivity (at 5mW in 1cm) average from 1kHz to 3kHz		85±2dB
6. THD	according chapter 3.1.	
7. Rub & buzz	< 60dB SPL (300Hz -1500Hz) in 1cm at 5mW (400mV <sub>eff</sub> )	

All acoustic measurements at 23±2°C

## 3.3. Power handling

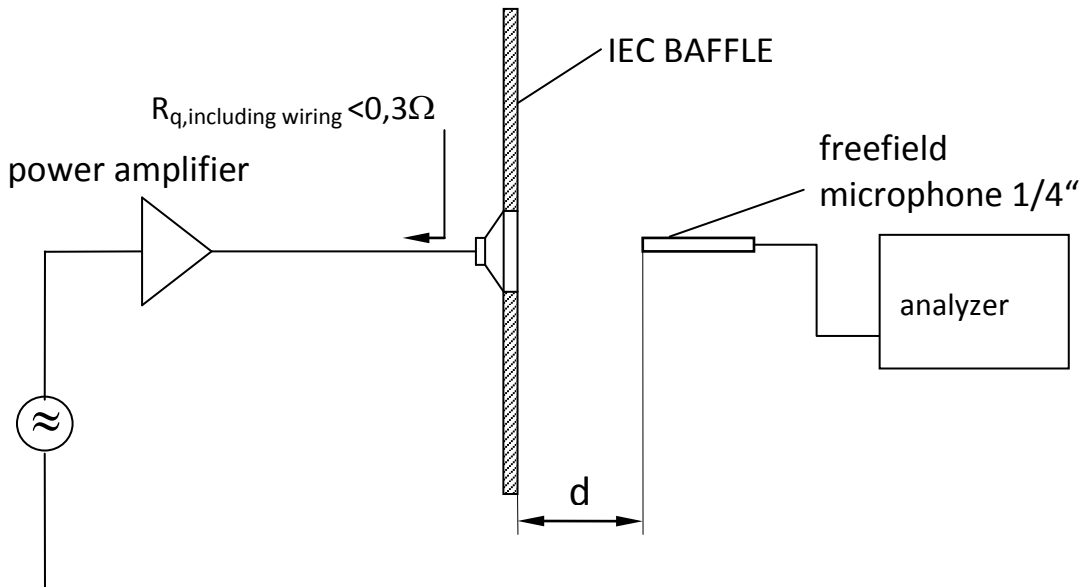

**Receiver mounted in lifetime test device (open rear/open front)**  
(pink noise shaped according to diagram below, crest factor 2)

1. Max short term power	(1sec. ON / 3sec. OFF)	75mW (RMS)
2. Max continuous power	(500h)	40mW (RMS)

Spectrum of life time test signal

### 3.4. Measurement setup

### 3.5. Measured Parameters

#### 3.5.1. Sensitivity

SPL is expressed in dB rel  $20 \mu\text{Pa}$ , computed according to IEC 268-5. Measurement set up and parameters according chapter 3.4. This test is performed for 100% of products in the production line.

#### 3.5.2. Frequency response

Frequency response is measured according test set up in chapter 3.4 data sheet and checked against the tolerance window defined in chapter 3.1. This Test is performed for 100% of products in the production line.

#### 3.5.3. Total harmonic distortion (THD)

Is measured according IEC 268-5 (2nd to 5th harmonics) and test set up in chapter 3.4. This test is performed for 100% of products in the production line.

#### 3.5.4. Rub & Buzz

Rub & Buzz will be measured in the Inline-measuring device with a sinusoidal sweep. Rub & Buzz is defined as the maximum level of no harmonic energy, expressed as signal to non-harmonic content ratio, in a certain frequency-range. Signal and evaluation criteria are according to chapter 3.2. This test is performed for 100% of products in the production line.

# 2403 260 00031

## 3.6. Measurement adapter

2403 260 00031

## 4. Environmental Conditions

### 4.1. Storage

The transducer fulfils the specified data after treatment according to the conditions of

**ETS 300 019-2-1**                      Specification of environmental test: Storage  
Test spec. T 1.2: Weather protected, not temperature controlled storage locations.

### 4.2. Transportation

The transducer fulfils the specified data after treatment according to the conditions of

**ETS 300 019-2-2**                      Specification of environmental test: Transportation  
Test Spec. T 2.3: Public Transportation

### 4.3. Functionality

The transducer fulfils the specified data after treatment according to the conditions of

**ETS 300 019-2-5**                      Specification of environmental test: Ground vehicle installations  
Test spec. T 5.1: Protected installation

**ETS 300 019-2-7**                      Specification of environmental test: Portable and non-stationary use  
Test spec. T 7.3E: Partly weather protected and non-weather protected locations.

## 5. Environmental tests

### 5.1. Qualification tests

According to our milestone plan (Product Creation Process), a complete qualification test will be done at design validation of products manufactured under serial conditions.

1x per year and product family a requalification takes place. The qualification process covers all tests described under 5.5 and a complete inspection.

### 5.2. Reliability tests

1x per month and product family samples are taken and submitted to tests described under 5.5.2

### 5.3. Sample Size, Sequence

Unless otherwise stated 20 arbitrary new samples will be used to perform each test for both, qualification and requalification test as described under 5.1 and 5.2.

### 5.4. Period of Shelf-Life

The period of shelf-life is 2 years.

### 5.5. Testing Procedures

#### 5.5.1. Storage Tests

##### 5.5.1.1. Low Temperature Storage Test

Parameter	Test Method and Conditions	Duration	Evaluation Standard
Low Temperature Storage (Ref. EN 60068-2-1)	-40°C rel. humidity not controlled	168h	Measurements after 2 hours recovery time. All samples fully operable. All acoustical parameters according specification with tolerances increased by 50 %.

##### 5.5.1.2. High Temperature Storage Test

Parameter	Test Method and Conditions	Duration	Evaluation Standard
Dry Heat Storage (Ref. EN 60068-2-2)	+85°C rel. humidity not controlled	168h	Measurements after 2 hours recovery time. All samples fully operable. All acoustical parameters according specification with tolerances increased by 50 %.

# 2403 260 00031

### 5.5.1.3. Temperature Cycle Test

Parameter	Test Method and Conditions	Duration	Evaluation Standard
Change of Temperature (Ref. EN 60068-2-14)	-40°C/+85°C Transition time <3 min. See Figure 5-1 below	5 cycles >2h for each temperature	Measurements after 2 hours recovery time. All samples fully operable. All acoustical parameters according specification with tolerances increased by 50 %.

Figure 5-1: Temperature Cycle Test

### 5.5.1.4. Temperature / Humidity Cycle Test

Parameter	Test Method and Conditions	Duration	Evaluation Standard
Damp heat, cyclic (Ref. IEC 60068-2-30)	+25°C/+55°C 90% to 95% RH. Temp. change time <3h See Figure 5-2 below <u>Caution:</u> no condensed water on products!	6 cycles. 24h at each temperature	Measurements after 2 hours recovery time. All samples fully operable. All acoustical parameters according specification with tolerances increased by 50 %.

Figure 5-2: Temperature / Relative Humidity Cycle Test

## 5.5.2. Operating Tests

### 5.5.2.1. Cold Operation Test

Parameter	Test Method and Conditions	Duration	Evaluation Standard
Cold Operation Test (Ref. EN 60068-2-1)	-20°C rel. humidity not controlled signal acc. Chapter <b>Error! Reference source not found.</b>	72h	Measurements after 2 hours recovery time. All samples fully operable. THD may be increased after test. All other acoustical parameters according specification with tolerances increased by 50 %.

### 5.5.2.2. Dry Heat Operation Test

Parameter	Test Method and Conditions	Duration	Evaluation Standard
Dry Heat Operation (Ref. EN 60068-2-2)	+70°C rel. humidity not controlled signal acc. Chapter <b>Error! Reference source not found.</b>	500h	Measurements after 2 hours recovery time. All samples fully operable. The allowable change in sensitivity shall not be greater than 3 dB. All other acoustical parameters according specification with tolerances increased by 50 %.

### 5.5.3. Salt Mist Test

Parameter	Test Method and Conditions	Duration	Evaluation Standard
Salt Mist (Ref. IEC60068-2-52, Kb / Severity 2)	The part must be subjected to 2 hours spray of 5% NaCl salt mist, at 35°C then be left at 40°C and 95% RH for 22h.	3 cycles	The samples shall be washed after the test with distilled water and dried at T < 50°C. Component may have reduced performance, but must still function properly. The allowable sensitivity difference shall not be greater than ±3dB from initial sensitivity.

# 2403 260 00031

## 5.5.4. Shock Resistance Test (Free Fall Test) - unprotected product

Parameter	Test Method and Conditions	Conditions / Sample size	Evaluation Standard
Mechanical shock (Ref. IEC60068-2-32 Ed), Procedure 1	Drop of sample without fixation of release plane from a height of 1.5m onto concrete floor.	Each 3 shocks in both directions of the 3 axes. (18 drops in total)	Component may have reduced performance, but must still function properly. The allowable sensitivity difference shall not be greater than $\pm 3$ dB from initial sensitivity.

## 5.5.5. Impact Durability Test (Tumble Test) – protected product

Parameter	Test Method and Conditions	Conditions / Sample size	Evaluation Standard
Impact durability (in a Tumble Tester) (Ref. IEC60068-2-32 Ed) (SPR a7.1.1)	Speaker <i>in drop test box</i> or representative mechanics. Random drops on steel base.	30 units 180 drops, 1m DUT power off	Component may have reduced performance, but must still function properly. The allowable sensitivity difference shall not be greater than $\pm 3$ dB from initial sensitivity.

## 5.5.6. Resistance to Electrostatic Discharge

Parameter	Test Method and Conditions	Conditions / Sample size	Evaluation Standard
Resistance to ESD IEC61000-4-2 Level 4 (SPR c 2.5.1)	One pole is grounded and the ESD pulse is applied to the other pole. The speaker must be stressed first with one polarisation and then with the other polarisation. DUT must be discharged between each ESD exposure. Level 4: contact +/- 8kV, air +/- 15kV	10 exposures on each polarity / 5 units DUT Power off	All samples fully operable. All acoustical parameters according specification with tolerances increased by 50%.

## 8. Disclaimer

Stresses above the Absolute Maximum Ratings may cause permanent damage to the device. These are stress ratings only. The device may not function when operated at these or any other conditions beyond those indicated under “Electrical and Acoustical Specifications”. Exposure beyond those indicated under “Electrical and Acoustical Specifications” for extended periods may affect device reliability.

This product is not qualified for use in automotive applications

Frequency range in telecom application:  
300 Hz – 3,4 kHz
