

Chipsmall Limited consists of a professional team with an average of over 10 year of expertise in the distribution of electronic components. Based in Hongkong, we have already established firm and mutual-benefit business relationships with customers from, Europe, America and south Asia, supplying obsolete and hard-to-find components to meet their specific needs.

With the principle of "Quality Parts, Customers Priority, Honest Operation, and Considerate Service", our business mainly focus on the distribution of electronic components. Line cards we deal with include Microchip, ALPS, ROHM, Xilinx, Pulse, ON, Everlight and Freescale. Main products comprise IC, Modules, Potentiometer, IC Socket, Relay, Connector. Our parts cover such applications as commercial, industrial, and automotives areas.

We are looking forward to setting up business relationship with you and hope to provide you with the best service and solution. Let us make a better world for our industry!

### SPEAKER-1115-4-SC-COBRA SF

In addition, COBRA SF features Knowles' advanced membrane technologies resulting in a state-of-the-art silicone membrane. This unique silicone membrane enables ultra-high excursion rates and superior robustness.

#### **Features:**

- Lateral sound outlet integrated in cover of speaker
- Significant height reduction for side-firing applications
- 100% in-line measurement of all specified acoustical and electrical parameters
- Pre-tested and integrated side-porting acoustics
- Manufactured to the highest standards
- High power handling capacity of 1000mW

#### Theory of operation 1.

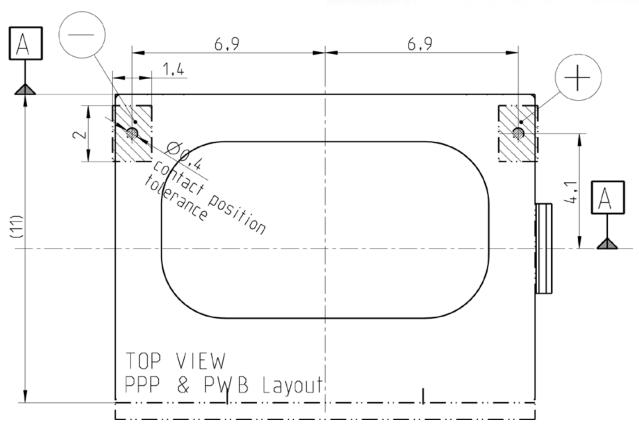

SPEAKER-1115-4-SC-COBRA SF is an electrodynamic transducer, designed to translate electrical analog signals into acoustic waves. The input signal is fed into a coil which is exposed to a permanent magnetic field and where a membrane is attached to. Through the principle of the resulting electromagnetic force, the membrane is moved according to the contents of the input signal and thus emitting sound by the air shifted.

### 2. Mechanical Layout and Dimensions

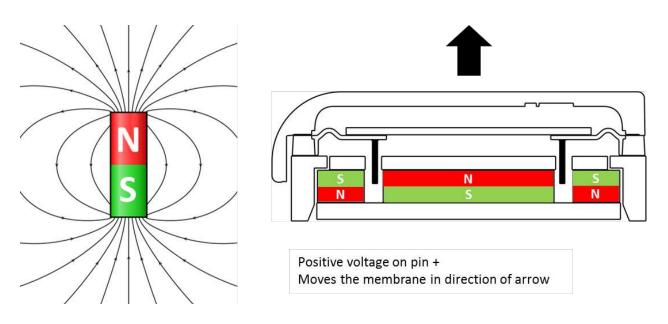

### 2.1. Main dimensions

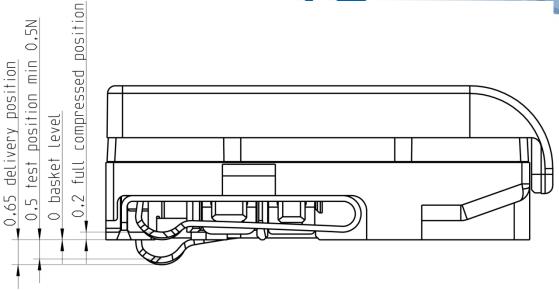

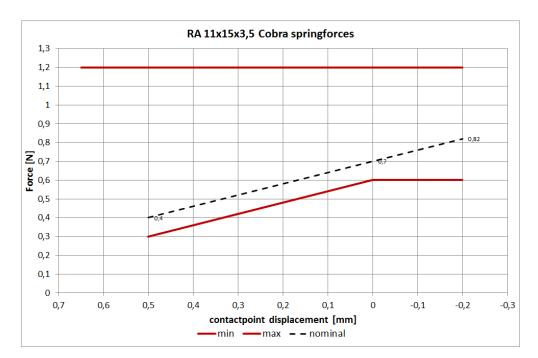

### 2.3. Magnetic polarity

### 2.4. Spring force

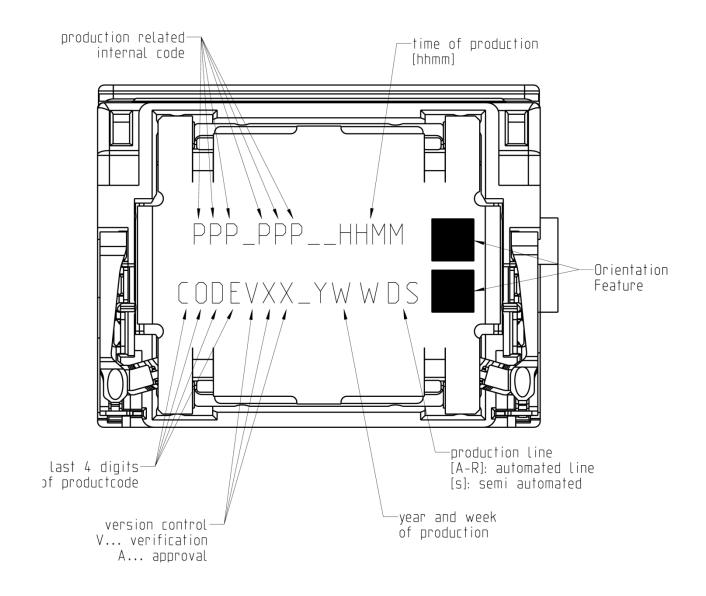

| SPRING FORCE TABLE               |              |            |  |  |
|----------------------------------|--------------|------------|--|--|
| Force at Basket level            | 0.0 mm       | min. 0.6 N |  |  |
| Force at Start Working position  | 0.5 mm       | min. 0.3 N |  |  |
| uncompressed (delivery position) | 0.65 ±0.15mm | 0.0 N      |  |  |
| Force at PPP level               | -0.2 mm      | max 1.2 N  |  |  |

### 2.5. Part marking/labeling

The samples have a serial number on bottom (pot) side

### 2.6. Material list

Material of basket: Polycarbonate

Material of membrane: Silicone

Material of membrane frame Polybutylene Terephthalate (PBT)

Material of pot: soft magnetic Iron

Material of magnet: Nd Fe B

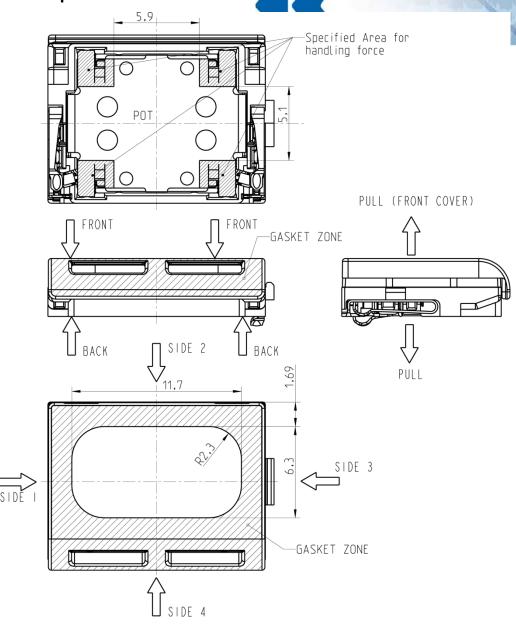

Material of contact CrNi-Steel, gold plated

Material of cover: Polycarbonate

Dimensions (in mm):  $11 \times 15 \times 4$ 

Mass: 1.56 g

### 2.7. Force on component

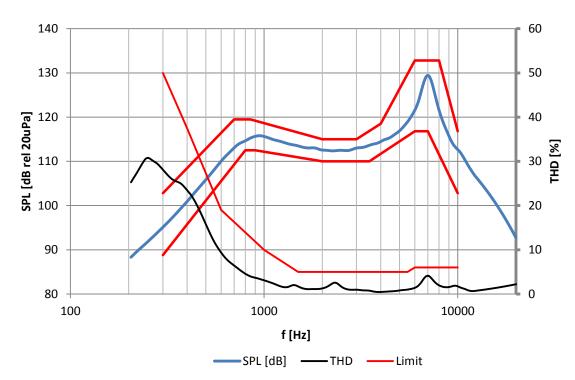

| FORCES ON DIFFERENT STATE OF COMPONENT |                 |                |               |  |  |
|--|-----------------|----------------|---------------|--|--|
| STATE                                  | MIN. SURFACE OF | MAX. PERMANENT | MAX. HANDLING |  |  |

7. Rub & buzz no audible Rub & Buzz

All acoustic measurements at 23±2°C

### 3.3. Power handling

Speaker mounted in 1cm³ test device (open front)

| 1. Max sine Power | 1000mW (RMS) |
|-------------------|--------------|
|-------------------|--------------|

| 2. Max short term power | (70°C, 1 sec. ON / 60sec. OFF) | 1200mW (RMS) |
|-------------------------|--------------------------------|--------------|
|                         |                                |              |

(pink noise, 2<sup>nd</sup> order high pass filtered, -3dB at 1.2kHz, crest factor 2)

3. Max continuous power (70°C, 500h) 1000mW (RMS)

(pink noise, 2nd order high pass filtered, -3dB at 800Hz, crest factor 2)

### 3.4. Measured parameters

#### 3.4.1. Sensitivity

SPL is expressed in dB rel 20μPa, computed according to IEC 268-5. Measurement set up and parameters according chapter 3.5. This test is performed for 100% of products in the production line.

#### 3.4.2. Frequency response

Frequency response is measured according test set up in chapter 3.3 data sheet and checked against the tolerance window defined in chapter 3.5. This Test is performed for 100% of products in the production line.

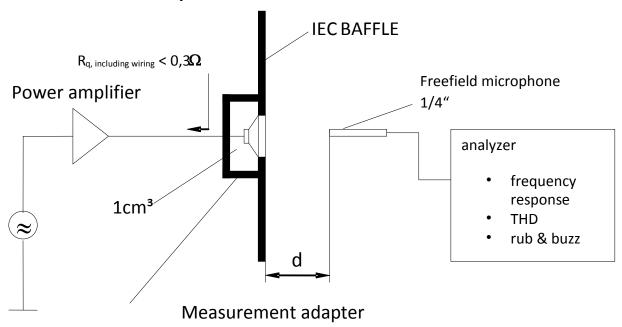

#### 3.4.3. **Total harmonic distortion (THD)**

Is measured according IEEE and test set up in chapter 3.5. This test is performed for 100% of products in the production line.

#### 3.4.4. Rub & buzz

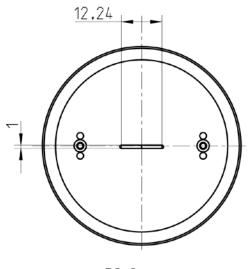

Rub & buzz will be measured in the Inline-measuring device with a sinusoidal sweep. Rub and buzz is defined as the maximum peak sound pressure in transmission range of the 5kHz high pass filter. This test is performed for 100% of products in the production line.

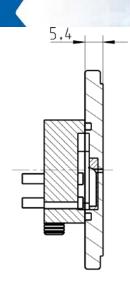

### 3.5. Measurement setup

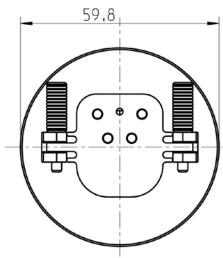

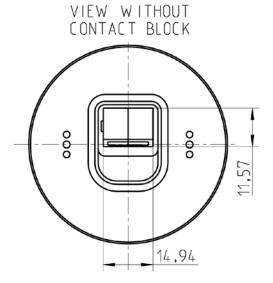

Measurement signal: Logarithmic sine sweep, 1.5s, 22kHz-180Hz

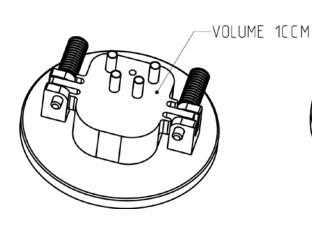

### 3.6. Measurement adapter

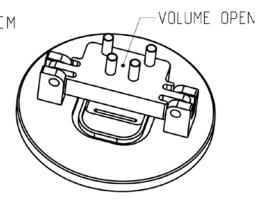

#### **Environmental Conditions** 4.

### 4.1. Storage

The transducer fulfills the specified data after treatment according to the conditions of

ETS 300 019-2-1 Specification of environmental test: Storage

Test spec. T 1.2: Weather protected, not temperature controlled storage

locations.

### 4.2. Transportation

The transducer fulfills the specified data after treatment according to the conditions of

ETS 300 019-2-2 Specification of environmental test: Transportation

Test Spec. T 2.3: Public Transportation

### 4.3. Functionality

The transducer fulfills the specified data after treatment according to the conditions of

ETS 300 019-2-5 Specification of environmental test: Ground vehicle installations

Test spec. T 5.1: Protected installation

ETS 300 019-2-7 Specification of environmental test: Portable and non-stationary use

Test spec. T 7.3E: Partly weather protected and non-weather protected

locations.

#### 5. **Environmental Tests**

### 5.1. Qualification tests

According to our milestone plan (Product Creation Process), a complete qualification test will be done at design validation of products manufactured under serial conditions.

1x per year and product family a regualification takes place. The qualification process covers all tests described under 4.5 and a complete inspection.

### 5.2. Reliability tests

1x per month and product family samples are taken and submitted to tests described under 4.5.2

### 5.3. Sample size, sequence

Unless otherwise stated 20 arbitrary new samples will be used to perform each test for both, qualification and requalification test as described under 4.1 and 4.2.

### 5.4. Period of shelf-life

The period of shelf-life is 2 years.

### 5.5. Testing procedures

#### 5.5.1. **Storage tests**

#### 5.5.1.1. **Cold storage test**

| Parameter   | Test Method and Con-<br>ditions            | Duration | Evaluation Standard  |
|---|--|----------|--|
| Low Temperature<br>Storage<br>(Ref. EN 60068-2-1) | -40°C<br>rel. humidity not con-<br>trolled | 168h     | Measurements after 2 hours recovery time.  All samples fully operable.  All acoustical parameters according specification with tolerances increased by 50 %. |

#### 5.5.1.2. Heat storage test

| Parameter           | Test Method and Con-<br>ditions | Duration | Evaluation Standard               |
|---------------------|---------------------------------|----------|-----------------------------------|
| Dry Heat Storage    | +85°C                           | 168h     | Measurements after 2 hours        |

### 5.5.2. Operating tests

| Parameter                                  | Test Method and Con-<br>ditions                            | Duration | Evaluation Standard   |
|--|--|----------|---|
| Cold Operation Test<br>(Ref. EN 60068-2-1) | -20°C rel. humidity not controlled signal acc. chapter 3.3 | 72h      | Measurements after 2 hours recovery time.  All samples fully operable.  THD may be increased after test. All other acoustical parameters according specification with tolerances increased by 50 %. |

### 5.5.2.2. Heat operation test

| Parameter                                 | Test Method and Con-<br>ditions                            | Duration | Evaluation Standard  |
|---|--|----------|--|
| Dry Heat Operation<br>(Ref. EN 60068-2-2) | +70°C rel. humidity not controlled signal acc. chapter 3.3 | 500h     | Measurements after 2 hours recovery time.  All samples fully operable.  The allowable change in sensitivity shall not be greater than 3 dB. All other acoustical parameters according specification with tolerances increased by 50 %. |

### 5.5.3. Salt mist test

| Parameter  | Test Method and Con-<br>ditions  | Duration | Evaluation Standard  |
|--|--|----------|--|
| Salt Mist<br>(Ref. IEC60068-2-52,<br>Kb / Severity 2 | The part must be subjected to 2 hours spray of 5% NaCl salt mist, at 35°C then be left at 40°C and 95% RH for 22h. | 3 cycles | The samples shall be washed after the test with distilled water and dried at T< 50°C.  Component may have reduced performance, but must still function properly. The allowable sensitivity difference shall not be greater than ±3dB from initial sensitivity. |

#### Guided free fall test - protected product 5.5.4.

| Parameter   | Test Method and Con-   | Conditions /   | Evaluation Standard   |
|---|--|--|---|
| Mechanical shock<br>(Ref. IEC60068-2-32<br>Ed), Procedure 1 | ditions  Speaker in drop test box or representative mechanics from a height of 1.5m onto concrete floor. | Sample size  30 units  Two drops on each side (2x6)  One drop on each edge (1x12) Two drops on each corner (2x8) (40 drops in total) | Component may have reduced performance, but must still function properly. The allowable sensitivity difference shall not be greater than ±3dB from initial sensitivity. |
|   |  | ,  |   |

#### Random free fall test (tumble test) - protected product 5.5.5.

| Parameter   | Test Method and Conditions   | Conditions /<br>Sample size                | Evaluation Standard  |
|---|--|--|--|
| Impact durability (in a<br>Tumble Tester)<br>(Ref. IEC60068-2-32<br>Ed)<br>(SPR a7.1.1) | Speaker <i>in drop test box</i> or representative me- chanics. Random drops on steel base. | 30 units<br>180 drops, 1m<br>DUT power off | Component may have reduced performance, but must still function properly. The allowable sensitivity difference shall not be greater than ±3 dB from initial sensitivity. |

#### 5.5.6. Resistance to electrostatic discharge

| Parameter  | Test Method and Condi-<br>tions   | Conditions /<br>Sample size                                    | Evaluation Standard   |
|--|---|--|---|
| Resistance to ESD<br>IEC61000-4-2 Level 4<br>(SPR c 2.5.1) | One pole is grounded and the ESD pulse is applied to the other pole. The speaker must be stressed first with one polarisation and then with the other polarisation. DUT must be discharged between each ESD exposure.  Level 4: contact +/- 8kV, air +/- 15kV | 10 exposures on<br>each polarity / 5<br>units<br>DUT Power off | All samples fully operable. All acoustical parameters according specification with tolerances increased by 50%. |

### 8. Disclaimer

Stresses above the Absolute Maximum Ratings may cause permanent damage to the device. These are stress ratings only. The device may not function when operated at these or any other conditions beyond those indicated under "Electrical and Acoustical Specifications". Exposure beyond those indicated under "Electrical and Acoustical Specifications" for extended periods may affect device reliability.

This product is not qualified for use in automotive applications

Frequency range in telecom application: 300 Hz – 3.4 kHz
