

Chipsmall Limited consists of a professional team with an average of over 10 year of expertise in the distribution of electronic components. Based in Hongkong, we have already established firm and mutual-benefit business relationships with customers from,Europe,America and south Asia,supplying obsolete and hard-to-find components to meet their specific needs.

With the principle of “Quality Parts,Customers Priority,Honest Operation,and Considerate Service”,our business mainly focus on the distribution of electronic components. Line cards we deal with include Microchip,ALPS,ROHM,Xilinx,Pulse,ON,Everlight and Freescale. Main products comprise IC,Modules,Potentiometer,IC Socket,Relay,Connector.Our parts cover such applications as commercial,industrial, and automotives areas.

We are looking forward to setting up business relationship with you and hope to provide you with the best service and solution. Let us make a better world for our industry!

"High Frequency Ceramic Solutions"

2.4 GHz Surface Mount, Above Metal, Low Profile Mini Chip Antenna

P/N 2450AT42E010B

This antenna must have metal directly underneath on bottom layer in order to function properly

Detail Specification: 10/17/2016

Page 1 of 4

This is the Web version of this datasheet, for the full datasheet, please contact us at: www.johansontechnology.com/ask-a-question

General Specifications

Part Number	2450AT42E010B
Frequency (MHz)	2400 - 2480
Peak Gain	-2.0 dBi typ. (YZ-V)
Impedance	50Ω
Power Capacity	2W max. (CW)
Q'ty/Reel (pcs)	2,000 pcs
Operating Temp	-40 to +85°C
Storage Temp	-40 to +85°C
Storage Period	18 months max.

Zero Clearance!

Antenna mounts directly above or below the metal layer of PCB. No antenna clearance required

Total average radiated efficiency on PCB feature on "Mounting Considerations 1" (orderable EVB p/n: 2450AT42E010B-EB1SMA) is ~35%

This antenna was designed in mind for small coin cell, wearable, IoT, 2.4 BLE, 802.11, ISM, Zigbee, etc. applications in close-range networks where metal or a battery/display covers the entire length or side of the PCB or encasement must be present directly under the antenna and there's no room for usual/typical antenna metal clearance.

This antenna is specifically designed for PCBs that have 1-2mm of total thickness

Part Number Explanation

P/N Suffix	Packing Style	Bulk	Suffix = S	e.g.. 2450AT42E010BS
		T & R	Suffix = E	e.g.. 2450AT42E010BE
EVB p/n		2450AT42E010B-EB1SMA (comes with 1 female SMA connector)		

Mechanical Specifications¹

	In	mm
L	0.197 ± 0.008	5.00 ± 0.20
W	0.079 ± 0.008	2.00 ± 0.20
T	0.059 ± 0.008	1.50 ± 0.20

Terminal Configuration

1	Feeding Point
2	NC ²
3	GND
4	GND

¹Total Top layer area occupied by antenna is 6.3x3.0mm

²Make sure to have Pin 2 soldered to its PCB land pad but **not** connected to GND or input, it must be NC (or floating).

How To Choose The Correct Antenna Variant

Refer to the table below for substrate thickness and the corresponding antenna variation.

PCB Substrate Thickness	Recommended JTI PN
≤ 1.0mm	2450AT42E0100
1.0mm - 2.0mm	2450AT42E010B
≥ 2.0mm	2450AT42E010C

Typical Efficiency Values @ 2.44GHz for various scenarios for a 30x50mm PCB

The following efficiency values represent performance on a 30x50mm EVB like on page 2. Please note that antenna efficiency varies widely with board layout, size and surroundings.

PCB Substrate Thickness (H)	Simulated Antenna Efficiency(%) @ 2.44GHz		
	2450AT42E0100	2450AT42E010B	2450AT42E010C
H = 0.12 mm	1.95%	1.02%	0.93%
H = 0.7 mm	29.20%	9.30%	2.30%
H = 1.5 mm	23.30%	41.90%	13.80%
H = 2.5 mm	21.60%	34.20%	38.40%

We encourage you to use a relatively thick dielectric layer below antenna, as we have seen a direct correlation between substrate thickness and antenna performance.

Note: "H" substrate thickness of <0.25mm (10mil) is not recommended. The component will still work and radiate, just not optimally.
