## : ©hipsmall

Chipsmall Limited consists of a professional team with an average of over 10 year of expertise in the distribution of electronic components. Based in Hongkong, we have already established firm and mutual-benefit business relationships with customers from,Europe,America and south Asia,supplying obsolete and hard-to-find components to meet their specific needs.

With the principle of "Quality Parts,Customers Priority,Honest Operation, and Considerate Service",our business mainly focus on the distribution of electronic components. Line cards we deal with include Microchip,ALPS,ROHM,Xilinx,Pulse,ON,Everlight and Freescale. Main products comprise IC,Modules,Potentiometer,IC Socket,Relay,Connector.Our parts cover such applications as commercial,industrial, and automotives areas.

We are looking forward to setting up business relationship with you and hope to provide you with the best service and solution. Let us make a better world for our industry!

## FL SWITCH SFNT...

Five and Eight-Port Standard Function Ethernet Switches for Extreme Environments

## AUTOMATION

## Data Sheet

2665_en_l
© PHOENIX CONTACT 2011-06-30

## 1 Description

The FL SWITCH SFNT... range of Factory Line switches can be used for quick and cost-effective Ethernet network expansion to the field level. These unmanaged switches allow operation across a wider temperature range than most switches, allowing networks to expand into process industry environments, such as oil/gas, chemical, water/wastewater, wind energy, security, monitoring and some marine segments. Due to the narrow housing design, the switches are suitable for use in control cabinets and junction boxes.
The FL SWITCH SFNT... switches support the auto negotiation function on the RJ45 ports and offer transmission speeds of $10 / 100 \mathrm{Mbps}$. Mixed operation for the connection of segments with different data transmission speeds is also supported. The RJ45 ports offer an auto crossing function, which means it is not necessary to make a distinction between 1:1 and crossover cables. Unused RJ45 ports can be fitted with security caps to provide mechanical protection against unauthorized use.
Fiber optic ports are available in an SC or ST format and offer speeds of 100 Mbps . The fiber optic ports extend the segment length to 2000 m or more, depending on the quality of the fiber optic cable.

## 2 Features and Benefits

- -40 to $75^{\circ} \mathrm{C}$ operating range
- Pretagged high priority messages are forwarded before lower priority messages during periods of high network traffic
- Auto-negotiation and autocross simplify cabling
- Couple copper network segments with different bit rates with automatic detection of the data transmission speed of 10 or 100 Mbps
- Individual LEDs at each port indicate communication activity and data rate
- Redundant power supply capable with local (LED) and remote (dry contact) alarms to indicate failure of one or both power supplies
- Switch-selectable link diagnostics indicate disconnected ports via local and remote alarms
- Available fiber optic options for extended distance and electrical noise immunity
- Fiber optic ports available in SC or ST formats
- Low-cost, low-complexity security by connecting Layer 1 security elements at the RJ45 ports to restrict access and tampering (optional) connected at the front, glass fiber cables at the bottom.

This data sheet is valid for all products listed on the following page:

Make sure you always use the latest documentation. It can be downloaded at www. phoenixcontact.net/catalog.

## 5 Overview

Figure 1 Power Connector, LED Locations and Security Frame

### 5.1 Diagnostic and Status Indicators

| Des. | Color | Status | Meaning |
| :---: | :---: | :---: | :--- |
| US1 and <br> US2 | green | ON | Supply voltage (US) in <br> the tolerance range |
|  |  | OFF | Supply voltage (US) too <br> low |
| Alarm | red | ON | US1 or US2 is too low or <br> missing |
|  |  |  | OFF |
|  |  | Ort link failure |  |

5.2 Data Transmission Speed LEDs (2 LEDs/Port)

|  | 10 Mbps | 100 Mbps |
| :---: | :---: | :---: |
| LNK/ACT | ON/blinking | ON/blinking |
| 100 | OFF | ON |

LNK/ACT LED:
ON: indicates an electrical link
Flashing: indicates network traffic (at high data rates the blinking is in a constant rate)

## 6 Installation

## CAUTION:

Only qualified personnel may start up and operate this device. Qualified personnel are persons authorized to start up, ground and mark devices, systems, and equipment according to the standards of safety technology.

## NOTE:

The FL SWITCH SFNT... module is designed for SELV and PELV operation according to IEC 61140/EN 61140.

Install the FL SWITCH SFNT... on a clean NS 35 rail. To avoid contact resistance use only clean, corrosion-free rails that meet the EN 60715 standard. End clamps can be mounted on both sides of the module to stop the modules from slipping on the rail.

## NOTE:

Connect the mounting rail to protective earth ground using a grounding terminal block. The modules are grounded when they are snapped onto the rail. Connect protective earth ground with low impedance.

### 6.1 Assembly

1. Place the module onto the rail from above. The upper holding keyway must be hooked onto the top edge of the rail.
2. Push the module from the front towards the mounting surface.
3. Once the module has been snapped on properly, check that it is fixed securely on the rail.

### 6.2 Removal

1. Insert a suitable tool (e.g., needle-nose pliers) into the arresting latch and pull it down.
2. Pull the module slightly away from the mounting surface.
3. Lift the module from the rail.

### 6.3 Mounting Plate

The FL PA SFNT 5-8 mounting plate provides a method for mounting SFNT 5- and 8-port switches to a flat surface in any orientation. The plate can be mounted on either side of the switch to allow the network ports to face the proper direction.
FL DA SFNT 5-8 adapter allows installation of the switch on a DIN rail with a low profile. The adapter also installs on either side of the switch.

Figure 2 FL PA SFNT 5-8 Mounting Plate

The dimensions of the FL PA SFNT 5-8 are shown in Figure 10.

Additional information for the FL PA SFNT 5-8 can be found at www.phoenixcontact.net/catalog.

### 6.4 Power Connection

The switch is designed for SELV and PELV operation at +24 V DC according to IEC 61140/EN 61140. Only SELV and PELV according to the defined standards may be used for supply purposes.

Snapping the switch onto a grounded rail connects it to the ground potential. In an environment particularly prone to EMI, noise immunity can be increased by an additional lowimpedance connection to protective earth (see Figure 3).

Figure 3 Power connections for redundant power supply

Figure 4 Power connections for single power supply

Use power conductors between $0.2-2.5 \mathrm{~mm}^{2}$
(24-12 AWG). Torque connection screws to 0.5-0.6 Nm (5-7lb-in.).

### 6.5 Alarm Contact

The FL SWITCH SFNT... switch provides contacts (R1, R2) for remote alarms if a failure is detected. Alarms are triggered if one or both power supplies fail. An alarm can be triggered if a port fails. Individual port alarms can be enabled via a DIP switch located on the bottom of the switch.
The alarm relay is a normally closed type. When there are no faults, the contact is held open. When a fault occurs, the relay is de-energized to close the contact.
The FL SWITCH SFNT 5... and FL SWITCH SFNT 4... use a five-position DIP switch. The FL SWITCH SFNT 8..., FL SWITCH SFNT 7... and FL SWITCH SFNT 6... use an eightposition DIP switch. Each DIP switch position corresponds to the port number.
To enable an alarm, move the appropriate slider to the ON position.

In addition to the remote alarm, failure is also indicated by the alarm LED On.
Failure indication of a fiber optic port can be in either the RX or TX fiber.

To disable an alarm, move the appropriate slider to the off position.

### 6.6 Ethernet Interface

The FL SWITCH SFNT... has five Ethernet ports on the front in RJ45 format to which only twisted-pair cables with an impedance of $100 \Omega$ can be connected. The data transmission speed is $10 / 100 \mathrm{Mbps}$. In addition, every port has an auto crossing function: it is not necessary to make a distinction between 1:1 or crossover Ethernet cables.

Figure 5 RJ45 pin assignment

### 6.7 Fiber Optic Connection

Two different types of fiber optic connection are available. The fiber optic connector(s) are located on the lower front face of the 8-port models or on the bottom face of the 5 -port models.
The ST connectors are typically individual round connectors and use a 1/4-turn connection.
The SC connectors have a square interface and the "conductors" are typically locked together through the connector.

## 7 Switching Characteristics

## Store and Forward

All data telegrams received by the switch are saved and their validity checked. Invalid or faulty data packets ( $>1522$ bytes or CRC errors) and fragments (< 64 bytes) are rejected. Valid data telegrams are forwarded by the switch. The switch always forwards the data using the data transmission speed that is used in the destination network segment.

## Multi-Address Function

The switch independently learns the addresses for termination devices, which are connected via a port, by evaluating the source addresses in the data telegrams. Only packets with unknown addresses, with a source address of this port or with a multicast/broadcast address in the destination address field are forwarded via the corresponding port. The switch can store addresses in its address table with an aging time of 5 minutes. This is important when more than one termination device is connected to one or more ports. In this way, several independent subnetworks can be connected to one switch.

A restart deletes the entire address table.

## Quality of Service (QoS): IEEE 802.1P/Q

The FL SWITCH SFNT... switches are capable of reading Ethernet packets that have already been assigned a priority level by a managed switch. In cases of heavy traffic, packets with a priority level between 4 and 7 are considered high priority and processed before packets with a priority level between 0 and 3 . After prioritization the packets are forwarded without modification.
