Bidirectional, Radioline 900 MHz transceiver for wireless transmission of serial and I/O data

Product Description

Radioline is the new wireless system for large systems. Special features include extremely easy assignment of inputs and outputs by simply turning the thumbwheel - without any programming. Radioline transmits I/O signals (I/O mode) or serial data (serial mode) and is therefore very versatile. Alternatively, I/O signals can now also be connected to controllers directly using the Modbus protocol (PLC/Modbus RTU mode).
In addition, you can implement various network structures: from a simple point-to-point connection to complex mesh networks. Thanks to the latest Trusted Wireless technology, Radioline is the ideal choice for industrial use.

Product Features

- ☑ Extended temperature range, -40°C ... +70°C
- ☑ Range of several kilometers thanks to adjustable data rates for the wireless interface (16 ... 500 kbps)
- ☑ Integrated RS-232/RS-485 interface
- ☑ Quick and easy startup without programming
- ☑ High degree of reliability due to Trusted Wireless 2.0 technology (AES encryption, frequency hopping method, and coexistence management)
- ☑ Mesh networks of up to 250 devices
