Raspberry Pi 3 Board Pack for Android Things™

PRODUCT ID: 3292

- # Description

Welcome to the Internet of Things with Google! Whether you are a device creator prototyping a new design for production, or a hobbyist looking for an introduction to the Android Things API, you've come to the right place. It's time to get your Android enabled hardware working with Google services!

Android Things is an Android-based OS that supports new embedded single board computer like the Raspberry Pi 3 and introduces a new set of Hardware API for Android to access GPIO, SPI, I2C, PWM and UART peripherals.

This kit will supply you with the Raspberry Pi 3 and some helpful Pi accessories to get going with Android Things. We recommend that if you're picking up this pack, you should also check out the Project Kit for Android Things, as that will provide you with peripherals to help you run through official samples, "getting started" tutorials, and build your first Android Things projects!
