## : ©hipsmall

Chipsmall Limited consists of a professional team with an average of over 10 year of expertise in the distribution of electronic components. Based in Hongkong, we have already established firm and mutual-benefit business relationships with customers from,Europe,America and south Asia,supplying obsolete and hard-to-find components to meet their specific needs.

With the principle of "Quality Parts,Customers Priority,Honest Operation, and Considerate Service",our business mainly focus on the distribution of electronic components. Line cards we deal with include Microchip,ALPS,ROHM,Xilinx,Pulse,ON,Everlight and Freescale. Main products comprise IC,Modules,Potentiometer,IC Socket,Relay,Connector.Our parts cover such applications as commercial,industrial, and automotives areas.

We are looking forward to setting up business relationship with you and hope to provide you with the best service and solution. Let us make a better world for our industry!

## Characteristics

The rectangular design of the Series 41 $(18 \times 24 \mathrm{~mm})$ makes it especially suited:

- Raised design
- PCB (with adaptor)

The series features a compact double-lit element that can be fitted from the front as a snap-on module.

## Functions

The Series 41 incorporates the following functions:

- Indicator
- Illuminated pushbutton

## Market segments

The EAO Series 41 is especially suited for applications in the segment:

- Machinery and Automation

Please refer to the EAO website to obtain detailed information regarding this series www.products.eao.com Configure a product to your exact needs and request a quotation.

## Illumination

## LED, T1 3/4 MG

## Additional Information

- Due to high surface temperatures, the series resistor must not be soldered directly to the terminals of the equipment (use a terminal plate)
- Order two LEDs
- When using $A C / D C$ types with $A C$ operation, slight flickering can occure
- Luminous intensity data of the LEDs on direct voltage
- Electrical and optical data are measured at $25^{\circ} \mathrm{C}$
- The specified versions are built with a protection diode (halve wave rectifier) in series and the LED
- Luminosity and wave length variations caused by LED manufacturing processes may cause slight differences regarding the illumination
- If the 24 VDC Bi-colour lamp is driven with normal polarity (plus on middle contact of the lamp) the first mentioned colour will light up, with inverted polarity the second colour will ligth up

Dimensions [mm]

| LED colour | Operating voltage | Operation current | Lumi. intensity | Dom. wavelength | Part No. | Weight |

## Actuator with Low Level switching element

## Switching system

This low level switching element was designed for switching low powers in electronic circuits. The mechanism assures reliable switching of loads ranging from a few $\mathrm{mA} / \mathrm{mV}$ up to $100 \mathrm{~mA} / 42$ VAC/VDC.
Single-break momentary contact, as normally open or normally closed with 4 independent points of contact. 2 momentary contacts per switching element; combination of normally open and normally closed is possible.
Special features are the long life, extremely short rebound time and stable contact resistance.

## Material

## Actuator case

Polysulfone, heat-resistant and self-extinguishing

## Material of contacts

gold-plated

## Switching element

Polysulfone, heat-resistant and self-extinguishing

## Mechanical characteristics

## Connection method

The universal terminals permit these units to be mounted on printed circuit boards (PCB). These terminals can also be used as soldering or plug-in terminals.
For these terminals we can also supply a plug-in base which, when soldered on to the board, enables the switch to be plugged in.

Soldering terminal
max. wire diameter: 2 wires of 0.8 mm
max. wire cross-section of stranded cable: $1 \times 0.75 \mathrm{~mm}^{2}$

Plug-in terminal
$2.0 \times 0.5 \mathrm{~mm}$

## Actuating force

3-3.5 N

## Actuating travel

3 mm

## Rebound time

Typ. $<100 \mu \mathrm{~s}$

## Mechanical life

Momentary action 5 million cycles of operation
Maintained action 1 million cycles of operation

Electrical characteristics

## Volume resistance

starting value $\leq 50 \mathrm{~m} \Omega$

## Switch rating

$10 \mu \mathrm{~A} / 100 \mu \mathrm{~V}$ to $100 \mu \mathrm{~A}$ at $42 \mathrm{VAC} / \mathrm{VDC}$

## Electric strength

2500 VAC, 50 Hz , 1 min. between all terminals and earth, as per IEC 60512-2-11

## Protection class

$-40^{\circ} \mathrm{C}$ to $+85^{\circ} \mathrm{C}$

## Service temperature

$-25^{\circ} \mathrm{C}$ to $+55^{\circ} \mathrm{C}$
for indicators and illuminated pushbuttons mounted as a block , make sure the heat can escape freely

## Degree of protection

Front as per IEC 60529: IP 40

## Resistance to shock

(single impacts, semi-sinusoidal)
15 g for 11 ms as per IEC 60512-4-3, IEC 60068-2-27

## Resistance to climate

Standard condition as per IEC 60068-2-3 and 2-30
Changing condition as per IEC 60068-2-14 and 2-33

## General notes

## 1. Engraving

## Typefaces

In addition to the most commonly used world languages (see DIN 1451) with close spacing, the following typefaces are available: Scandinavian, Slavian, Greek, Russian.

## Coloured filling of engraving

Specify whether engraving should be on the diffuser, or on the lens. Specify the infill colour, character height and the text or symbol orientation.

## Symbols

A list of the symbols available can be supplied on request.

## 2. Hot stamping

For large batches it is worth while to have the lettering produced by hot stamping.

## Symbols

A list of the symbols available can be supplied on request.

## 3. Film inserts

Instead of using engraving, the lenses can be fitted with transparent film inserts. For this purpose, though, it is advisable to use transparent lenses.
To insert the film, the feet of the lens support have to be pushed together far enough to enable the lens to be lifted off easily.

## Film dimensions

max. $12.7 \times 18.7 \mathrm{~mm}$ (monocolour lens)
max. $9 \times 12.7 \mathrm{~mm}$ (two-colour lens)
Film thickness 0.2 mm
Important: Before engraving, check the position of the illuminated pushbuttons or indicator.

## Typefaces

For letters and figures, typefaces with $2.5 \mathrm{~mm}, 3 \mathrm{~mm}$ and 4 mm are available.

All dimensions in mm

| Height of letters h | Thickness of letters s | Number of lines | Number of capital letters per line (target value) | Number of small letters per line (target value) | Image |

## Suppressor circuits

When switching inductive loads such as relays, DC motors, and DC solenoids, it is always important to absorb surges (e. g. with a diode) to protect the contacts. When these inductive loads are switched off, a counter emf can severely damage switch contacts and greatly shorten lifetime.

Fig. 1 shows an inductive load with a free-wheeling diode connected in parallel. This free-wheeling diode provides a path for the inductor current to flow when the current is interrupted by the switch. Without this free-wheeling diode, the voltage across the coil will be limited only by dielectric breakdown voltages of the circuit or parasitic elements of the coil. This voltage can be kilovolts in amplitude even when nominal circuit voltages are low (e.g. 12VDC) see Fig. 2.

The free-wheeling diode should be chosen so that the reverse breakdown voltage is greater than the voltage driving the inductive load. The DC blocking voltage (VR) of the free-wheeling diode can be found in the datasheet of a diode. The forward current should be equal or greater than the maximum current flowing through the load

To get an efficient protection, the free-wheeling diode must be connected as close as possible to the inductive load!
