

Chipsmall Limited consists of a professional team with an average of over 10 year of expertise in the distribution of electronic components. Based in Hongkong, we have already established firm and mutual-benefit business relationships with customers from,Europe,America and south Asia,supplying obsolete and hard-to-find components to meet their specific needs.

With the principle of "Quality Parts,Customers Priority,Honest Operation,and Considerate Service",our business mainly focus on the distribution of electronic components. Line cards we deal with include Microchip,ALPS,ROHM,Xilinx,Pulse,ON,Everlight and Freescale. Main products comprise IC,Modules,Potentiometer,IC Socket,Relay,Connector.Our parts cover such applications as commercial,industrial, and automotives areas.

We are looking forward to setting up business relationship with you and hope to provide you with the best service and solution. Let us make a better world for our industry!

**PE4210**

**SPDT UltraCMOS™ RF Switch  
10 MHz - 3 GHz**

**Features**

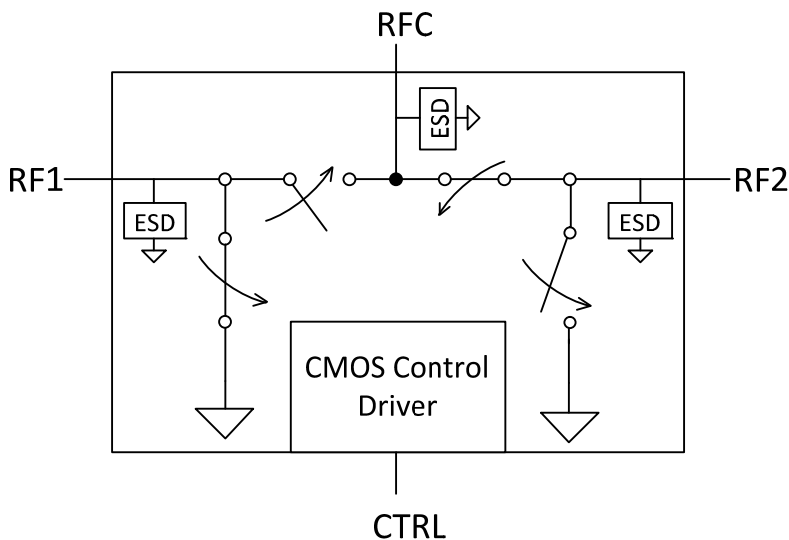

- Single 3-volt power supply
- Low Insertion loss: 0.30 dB at 1000 MHz, 0.45 dB at 2000 MHz
- High isolation of 35 dB at 1000 MHz, 25 dB at 2000 MHz
- Typical input 1 dB compression point of +14.5 dBm
- Single-pin CMOS or TTL logic control
- Packaged in a small 8-lead MSOP

**Product Description**

The PE4210 UltraCMOS™ RF Switch is designed to cover a broad range of applications from 10 MHz to 3 GHz. This single-supply switch integrates on-board CMOS control logic driven by a simple, single-pin CMOS or TTL compatible control input. Using a nominal +3-volt power supply, a typical input 1 dB compression point of +14 dBm can be achieved. The PE4210 also exhibits input-output isolation of better than 35 dB at 1000 MHz and is offered in a small 8-lead MSOP package.

The PE4210 is manufactured on Peregrine's UltraCMOS™ process, a patented variation of silicon-on-insulator (SOI) technology on a sapphire substrate, offering the performance of GaAs with the economy and integration of conventional CMOS.

**Figure 1. Functional Diagram**

**Figure 2. Package Type  
8-lead MSOP**

**Table 1. Electrical Specifications @ +25 °C,  $V_{DD} = 3\text{ V}$  ( $Z_S = Z_L = 50\ \Omega$ )**

Parameter	Conditions	Min	Typ	Max	Units
Operating Frequency <sup>1</sup>		10		3000	MHz
Insertion Loss	1000 MHz		0.30	0.40	dB
	2000 MHz		0.45	0.60	dB
Isolation – RFC to RF1/RF2	1000 MHz	34.5	35.5		dB
	2000 MHz	24.5	25		dB
Isolation – RF1 to RF2	1000 MHz	36.5	37.5		dB
	2000 MHz	25.5	26.5		dB
Return Loss	1000 MHz	22.5	24.5		dB
	2000 MHz	15	16		dB
'ON' Switching Time	CTRL to 0.1 dB final value, 2 GHz		200		ns
'OFF' Switching Time	CTRL to 25 dB isolation, 2 GHz		90		ns
Video Feedthrough <sup>2</sup>			2.5		mV <sub>pp</sub>
Input 1 dB Compression	2000 MHz	13	14.5		dBm
Input IP3	2000 MHz, 5 dBm	30	33.5		dBm

Notes: 1. Device linearity will begin to degrade below 10 MHz.

2. The DC transient at the output of any port of the switch when the control voltage is switched from Low to High or High to Low in a 50  $\Omega$  test set-up, measured with 1 ns risetime pulses and 500 MHz bandwidth.

**Table 2. DC Electrical Specifications**

Parameter	Min	Typ	Max	Units
$V_{DD}$ Power Supply Voltage	2.7	3.0	3.3	V
$I_{DD}$ Power Supply Current ( $V_{DD} = 3\text{ V}$ , $V_{CNTL} = 3$ )		250	500	nA
Control Voltage High	$0.7 \times V_{DD}$			V
Control Voltage Low			$0.3 \times V_{DD}$	V

**Figure 3. Pin Configuration (Top View)**

**Table 3. Pin Descriptions**

Pin No.	Pin Name	Description
1	V <sub>DD</sub>	Nominal 3 V supply connection. A bypass capacitor (100 pF) to the ground plane should be placed as close as possible to the pin
2	CTRL	CMOS or TTL logic level: High = RFC to RF1 signal path Low = RFC to RF2 signal path
3	GND	Ground connection. Traces should be physically short and connected to ground plane for best performance.
4	RFC	Common RF port for switch <sup>1</sup>
5	RF2	RF2 port <sup>1</sup>
6	GND	Ground connection. Traces should be physically short and connected to ground plane for best performance.
7	GND	Ground connection. Traces should be physically short and connected to ground plane for best performance.
8	RF1 <sup>1</sup>	RF1 port

Note 1. All RF pins must be DC blocked with an external series capacitor or held at 0 V<sub>DC</sub>.

**Table 4. Absolute Maximum Ratings**

Symbol	Parameter/Conditions	Min	Max	Units
V <sub>DD</sub>	Power Supply Voltage	-0.3	4.0	V
V <sub>I</sub>	Voltage on any input	-0.3	V <sub>DD</sub> + 0.3	V
T <sub>ST</sub>	Storage temperature range	-65	+150	°C
T <sub>OP</sub>	Operating temperature range	-40	+85	°C
P <sub>IN</sub>	Input power (50 Ω)		18	dBm
V <sub>ESD</sub> <sup>1</sup>	HBM ESD Voltage	200		V

Note: 1. Human Body Model ESD Voltage (HBM, MIL\_STD 883 Method 3015.7)

Exceeding absolute maximum ratings may cause permanent damage. Functional operation should be restricted to the limits in the DC Electrical Specifications table. Operation between operating range maximum and absolute maximum for extended periods may reduce reliability.

### Electrostatic Discharge (ESD) Precautions

When handling this UltraCMOS™ device, observe the same precautions that you would use with other ESD-sensitive devices. Although this device contains circuitry to protect it from damage due to ESD, precautions should be taken to avoid exceeding the specified rating.

### Latch-Up Avoidance

Unlike conventional CMOS devices, UltraCMOS™ devices are immune to latch-up.

**Table 5. Control Logic Truth Table**

Control Voltage	Signal Path
CTRL = CMOS or TTL High	RFC to RF1
CTRL = CMOS or TTL Low	RFC to RF2

### Control Logic

The control logic input pin (CTRL) is typically driven by a 3-volt CMOS logic level signal, and has a threshold of 50% of V<sub>DD</sub>. For flexibility to support systems that have 5-volt control logic drivers, the control logic input has been designed to handle a 5-volt logic HIGH signal. (A minimal current will be sourced out of the V<sub>DD</sub> pin when the control logic input voltage level exceeds V<sub>DD</sub>.)

### Moisture Sensitivity Level

The Moisture Sensitivity Level rating for the PE4210 in the 8-lead 3 x 3 mm MSOP package is MSL1.

### Evaluation Kit

The SPDT Switch Evaluation Kit board was designed to ease customer evaluation of the PE4210 SPDT switch. The RF common port is connected through a 50 Ω transmission line to the top left SMA connector, J1. Port 1 and Port 2 are connected through 50 Ω transmission lines to the top two SMA connectors on the right side of the board, J3 and J4. A through transmission line connects SMA connectors J6 and J8. This transmission line can be used to estimate the loss of the PCB over the environmental conditions being evaluated.

The board is constructed of a two metal layer FR4 material with a total thickness of 0.031". The bottom layer provides ground for the RF transmission lines. The transmission lines were designed using a coplanar waveguide model with a trace width of 0.030", trace gaps of 0.007", dielectric thickness of 0.028", metal thickness of 0.0014" and ε<sub>r</sub> of 4.4. Note that the predominate mode for these transmission lines is coplanar waveguide with a ground plane.

J2 provides a means for controlling DC and digital inputs to the device. Starting from the lower left pin, the second pin to the right (J2-3) is connected to the device CTRL input. The fourth pin to the right (J2-7) is connected to the device V<sub>DD</sub> input. A decoupling capacitor (100 pF) is provided on both CTRL and V<sub>DD</sub> traces. It is the responsibility of the customer to determine proper supply decoupling for their design application. Removing these components from the evaluation board has not been shown to degrade RF performance.
