

Chipsmall Limited consists of a professional team with an average of over 10 year of expertise in the distribution of electronic components. Based in Hongkong, we have already established firm and mutual-benefit business relationships with customers from, Europe, America and south Asia, supplying obsolete and hard-to-find components to meet their specific needs.

With the principle of "Quality Parts, Customers Priority, Honest Operation, and Considerate Service", our business mainly focus on the distribution of electronic components. Line cards we deal with include Microchip, ALPS, ROHM, Xilinx, Pulse, ON, Everlight and Freescale. Main products comprise IC, Modules, Potentiometer, IC Socket, Relay, Connector. Our parts cover such applications as commercial, industrial, and automotives areas.

We are looking forward to setting up business relationship with you and hope to provide you with the best service and solution. Let us make a better world for our industry!

### Notice for TAIYO YUDEN Products

Please read this notice before using the TAIYO YUDEN products.

### /!\ REMINDERS

Product information in this catalog is as of October 2017. All of the contents specified herein are subject to change without notice due to technical improvements, etc. Therefore, please check for the latest information carefully before practical application or use of our products.

Please note that TAIYO YUDEN shall not be in any way responsible for any damages and defects in products or equipment incorporating our products, which are caused under the conditions other than those specified in this catalog or individual product specification sheets.

- Please contact TAIYO YUDEN for further details of product specifications as the individual product specification sheets are available.
- Please conduct validation and verification of our products in actual condition of mounting and operating environment before using our products.
- The products listed in this catalog are intended for use in general electronic equipment (e.g., AV equipment, OA equipment, home electric appliances, office equipment, information and communication equipment including, without limitation, mobile phone, and PC) and medical equipment classified as Class I or II by IMDRF. Please be sure to contact TAIYO YUDEN for further information before using the products for any equipment which may directly cause loss of human life or bodily injury (e.g., transportation equipment including, without limitation, automotive powertrain control system, train control system, and ship control system, traffic signal equipment, disaster prevention equipment, medical equipment classified as Class III by IMDRF, highly public information network equipment including, without limitation, telephone exchange, and base station).

Please do not incorporate our products into any equipment requiring high levels of safety and/or reliability (e.g., aerospace equipment, aviation equipment\*, medical equipment classified as Class IV by IMDRF, nuclear control equipment, undersea equipment, military equipment).

\*Note: There is a possibility that our products can be used only for aviation equipment that does not directly affect the safe operation of aircraft (e.g., in-flight entertainment, cabin light, electric seat, cooking equipment) if such use meets requirements specified separately by TAIYO YUDEN. Please be sure to contact TAIYO YUDEN for further information before using our products for such aviation equipment.

When our products are used even for high safety and/or reliability-required devices or circuits of general electronic equipment, it is strongly recommended to perform a thorough safety evaluation prior to use of our products and to install a protection circuit as necessary.

Please note that unless you obtain prior written consent of TAIYO YUDEN, TAIYO YUDEN shall not be in any way responsible for any damages incurred by you or third parties arising from use of the products listed in this catalog for any equipment requiring inquiry to TAIYO YUDEN or prohibited for use by TAIYO YUDEN as described above.

- Information contained in this catalog is intended to convey examples of typical performances and/or applications of our products and is not intended to make any warranty with respect to the intellectual property rights or any other related rights of TAIYO YUDEN or any third parties nor grant any license under such rights.
- Please note that the scope of warranty for our products is limited to the delivered our products themselves and TAIYO YUDEN shall not be in any way responsible for any damages resulting from a fault or defect in our products. Notwithstanding the foregoing, if there is a written agreement (e.g., supply and purchase agreement, quality assurance agreement) signed by TAIYO YUDEN and your company, TAIYO YUDEN will warrant our products in accordance with such agreement.
- The contents of this catalog are applicable to our products which are purchased from our sales offices or authorized distributors (hereinafter "TAIYO YUDEN's official sales channel"). Please note that the contents of this catalog are not applicable to our products purchased from any seller other than TAIYO YUDEN's official sales channel.
- Caution for Export

Some of our products listed in this catalog may require specific procedures for export according to "U.S. Export Administration Regulations", "Foreign Exchange and Foreign Trade Control Law" of Japan, and other applicable regulations. Should you have any questions on this matter, please contact our sales staff.

### WIRE-WOUND CHIP POWER INDUCTORS(CB SERIES)

### ■PARTS NUMBER

\* Operating Temp.: -40~+105°C (Including self-generated heat)

 $\Delta$  = Blank space

①Series name	
Code	Series name

18.Damp heat life to	1		
Specified Value	LB, LBC, LBR, LBMF Series	Inductance change : Within±10%	
	CB, CBC, CBL, CBMF Series	No significant abnormality in appearance.	
	LBM Series		
Test Methods and Remarks	Temperature : 60±2°C		
	Humidity		
		standard condition after the test, followed by the measurement within 48 hrs.	
	,		
19.Loading under da	amp heat life test		
	LB, LBC, LBR, LBMF Series		
	CB, CBC, CBL, CBMF Series	Inductance change : Within±10%  No significant abnormality in appearance.	
Specified Value	LBM Series	To significant abnormality in appearance.	
Test Methods and	Temperature : 60±2°C		
Remarks	Humidity : 90~95%RH		
	Duration : 1000 hrs Applied current : Rated current		
		standard condition after the test, followed by the measurement within 48 hrs.	
20.High temperature	e life test		
	LB, LBC, LBR, LBMF Series	_	
Specified Value	CB, CBC, CBL, CBMF Series	Inductance change : Within±10%	
	LBM Series	No significant abnormality in appearance.	
Test Methods and	Temperature : 85±2°C		
Remarks	Duration : 1000 hrs  Recovery : At least 2 hrs of recovery under the	standard condition after the test, followed by the measurement within 48 hrs.	
	The loads 2 ms of recovery under the	standard condition arter the cost, followed by the measurement within 40 ms.	
21.Loading at high t	temperature life test		
-		Inductance change : Within±10%	
	LB, LBC, LBR, LBMF Series	(LBC3225 Series : Within±20%)	
Specified Value		No significant abnormality in appearance.	
	CB, CBC, CBL, CBMF Series		
	LBM Series		
Test Methods and	Temperature : 85±2°C  Duration : 1000 hrs		
Remarks	Applied current : Rated current		
	Recovery : At least 2 hrs of recovery under the standard condition after the test, followed by the measurement within 48 hrs.		
22.Low temperature	e life test		
	LB, LBC, LBR, LBMF Series	Inductance change : Within±10%	
Specified Value	CB, CBC, CBL, CBMF Series	No significant abnormality in appearance.	
	LBM Series		
Test Methods and	Temperature : -40±2°C		
Remarks	Duration : 1000 hrs  Recovery : At least 2 hrs of recovery under the standard condition after the test, followed by the measurement within 48 hrs.		
		,	
23.Standard conditi	on		
	LD LDG LDD LDM5 C :	Standard test conditions	
	LB, LBC, LBR, LBMF Series	Unless specified, Ambient temperature is $20\pm15^{\circ}\text{C}$ and the Relative humidity is 65±20%. If there is any doubt about the test results, further	
0 (5 ) (4)	CR CRC CRL CRME Sovies		
Specified Value	CB, CBC, CBL, CBMF Series	measurement shall be had within the following limits:  Ambient Temperature: 20±2°C	
	LBM Series	Relative humidity: 65±5%	
	LDM GG1103	Inductance value is based on our standard measurement systems.	
		inductance value is bused on our standard medistrement systems.

### WIRE-WOUND CHIP INDUCTORS (LB SERIES), WIRE-WOUND CHIP POWER INDUCTORS (CB SERIES), WIRE-WOUND CHIP INDUCTORS FOR SIGNAL LINES (LB SERIES M TYPE)

# Precautions Operating environment 1. The products described in this specification are intended for use in general electronic equipment, (office supply equipment, telecommunications systems, measuring equipment, and household equipment). They are not intended for use in mission-critical equipment or systems requiring special quality and high reliability (traffic systems, safety equipment, aerospace systems, nuclear control systems and medical equipment including life-support systems,) where product failure might result in loss of life, injury or damage. For such uses, contact TAIYO YUDEN Sales Department in advance. 2. PCB Design Precautions Land pattern design 1. Please contact any of our offices for a land pattern, and refer to a recommended land pattern of a right figure or specifications. PRECAUTIONS [Recommended Land Patterns]

Mounting and soldering conditions should be checked beforehand.
 Applicable soldering process to those products is reflow soldering only.

## 3. Considerations for automatic placement Precautions Adjustment of mounting machine 1. Excessive impact load should not be imposed on the products when mounting onto the PC boards. 2. Mounting and soldering conditions should be checked beforehand. Technical considerations 1. When installing products, care should be taken not to apply distortion stress as it may deform the products.

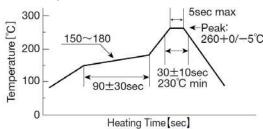

## A. Soldering A. Soldering A. Reflow soldering (LB and CB Types) 1. For reflow soldering with either leaded or lead–free solder, the profile specified in "point for controlling" is recommended. A. Recommended conditions for using a soldering iron 1. Put the soldering iron on the land–pattern. Soldering iron's temperature − Below 350°C Duration−3 seconds or less. The soldering iron should not come in contact with inductor directly. A. Reflow soldering (LB and CB Types) 1. Reflow profile 300 5sec max -Peak: 260+0/−5°C

Technical considerations

Technical

considerations

Surface Mounting

- ◆Recommended conditions for using a soldering iron
  - 1. Components can be damaged by excessive heat where soldering conditions exceed the specified range

5. Cleaning	5. Cleaning	
Precautions	♦ Cleaning conditions Washing by supersonic waves shall be avoided.	
Technical considerations	◆Cleaning conditions If washed by supersonic waves, the products might be broken.	

This catalog contains the typical specification only due to the limitation of space. When you consider the purchase of our products, please check our specification. For details of each product (characteristics graph, reliability information, precautions for use, and so on), see our Web site (http://www.ty-top.com/).

6. Handling	
Precautions	<ul> <li>◆Handling</li> <li>1. Keep the inductors away from all magnets and magnetic objects.</li> <li>◆Breakaway PC boards (splitting along perforations)</li> <li>1. When splitting the PC board after mounting inductors, care should be taken not to give any stresses of deflection or twisting to the board.</li> <li>2. Board separation should not be done manually, but by using the appropriate devices.</li> <li>◆Mechanical considerations</li> <li>1. Please do not give the inductors any excessive mechanical shocks.</li> </ul>
Technical considerations	<ul> <li>◆Handling</li> <li>1. There is a case that a characteristic varies with magnetic influence.</li> <li>◆Breakaway PC boards( splitting along perforations)</li> <li>1. Planning pattern configurations and the position of products should be carefully performed to minimize stress.</li> <li>◆Mechanical considerations</li> <li>1. There is a case to be damaged by a mechanical shock.</li> </ul>

7. Storage cond	
Precautions	♦Storage
	1. To maintain the solderability of terminal electrodes and to keep the packing material in good condition, temperature and humidity in the
	storage area should be controlled.
	Recommended conditions
	Ambient temperature : 0~40°C
	Humidity: Below 70% RH
	• The ambient temperature must be kept below 30°C. Even under ideal storage conditions, solderability of products electrodes may
	decrease as time passes.
	For this reason, product should be used within 6 months from the time of delivery.
	In case of storage over 6 months, solderability shall be checked before actual usage.
Technical considerations	♦Storage
	1. Under a high temperature and humidity environment, problems such as reduced solderability caused by oxidation of terminal electrodes
	and deterioration of taping/packaging materials may take place.
