SERIAL SERVERS

PORTSERVER® TS 8/16

Reliable, cost-effective serial-to-network connectivity

PortServer TS 8/16 serial servers deliver intelligent, reliable and cost-effective RS-232/422/485 serial-to-Ethernet connectivity. They support data center console port management applications, as well as property management, point-of-sale, data acquisition, industrial automation, power utilities, travel reservations and other applications requiring serial-to-IP connectivity.

PortServer TS 8/16 incorporates Digi's patented RealPort® COM port redirection software, which provides local serial port functionality. Incoming and outgoing Rlogin and Telnet sessions are also supported on each port.

Digi Port Authority - Remote (DPA-Remote) gives users a management tool for monitoring network and serial activity from a Windows or UNIX-based client or server.

In addition, PortServer TS 8/16 serial servers provide SSHv2 encryption to protect against unauthorized monitoring of LAN traffic and port buffering to capture vital information from the serial ports of managed UNIX servers for problem resolution.

BENEFITS

- 8 or 16 RS-232 or software selectable RS-232/422/485 serial ports
- Cost-effective serial-to-network connectivity
- SSHv2 ensures encrypted connections
- RealPort with encryption provides SSL-based protection
- Ports may be shared between multiple hosts running different operating systems with socket connections, not RealPort
- Supports SNMP for easy network management and RADIUS for authentication and accounting
