

Chipsmall Limited consists of a professional team with an average of over 10 year of expertise in the distribution of electronic components. Based in Hongkong, we have already established firm and mutual-benefit business relationships with customers from,Europe,America and south Asia,supplying obsolete and hard-to-find components to meet their specific needs.

With the principle of “Quality Parts,Customers Priority,Honest Operation,and Considerate Service”,our business mainly focus on the distribution of electronic components. Line cards we deal with include Microchip,ALPS,ROHM,Xilinx,Pulse,ON,Everlight and Freescale. Main products comprise IC,Modules,Potentiometer,IC Socket,Relay,Connector.Our parts cover such applications as commercial,industrial, and automotives areas.

We are looking forward to setting up business relationship with you and hope to provide you with the best service and solution. Let us make a better world for our industry!

## 16-Bit Transceivers and Registers with 3-STATE Outputs

### General Description

The ABT16652 consists of sixteen bus transceiver circuits with D-type flip-flops, and control circuitry arranged for multiplexed transmission of data directly from the input bus or from the internal registers. Each byte has separate control inputs which can be shorted together for full 16-bit operation. Data on the A or B bus will be clocked into the registers as the appropriate clock pin goes to HIGH logic level. Output Enable pins (OEAB,  $\overline{\text{OEBA}}$ ) are provided to control the transceiver function.

### Features

- Independent registers for A and B buses
- Multiplexed real-time and stored data
- Separate control logic for each byte
- A and B output sink capability of 64 mA, source capability of 32 mA
- Guaranteed output skew
- High impedance glitch free bus loading during entire power up and power down cycle
- Nondestructive hot insertion capability

### Ordering Code:

Order Number	Package Number	Package Description
74ABT16652CSSC	MS56A	56-Lead Shrink Small Outline Package (SSOP), JEDEC MO-118, 0.300" Wide
74ABT16652CMTD	MTD56	56-Lead Thin Shrink Small Outline Package (TSSOP), JEDEC MO-153, 6.1mm Wide

Devices also available in Tape and Reel. Specify by appending the suffix letter "X" to the ordering code.

### Pin Descriptions

Pin Names	Descriptions
A <sub>0</sub> -A <sub>16</sub>	Data Register A Inputs/ 3-STATE Outputs
B <sub>0</sub> -B <sub>16</sub>	Data Register B Inputs/ 3-STATE Outputs
CPAB <sub>n</sub> , CPBA <sub>n</sub>	Clock Pulse Inputs
SAB <sub>n</sub> , SBA <sub>n</sub>	Select Inputs
OEAB <sub>n</sub> , $\overline{\text{OEBA}}_n$	Output Enable Inputs

### Connection Diagram

### Functional Description

In the transceiver mode, data present at the HIGH impedance port may be stored in either the A or B register or both.

The select (SAB<sub>n</sub>, SBA<sub>n</sub>) controls can multiplex stored and real-time.

The examples in *Figure 1* demonstrate the four fundamental bus-management functions that can be performed with the ABT16652.

Data on the A or B data bus, or both can be stored in the internal D flip-flop by LOW to HIGH transitions at the appropriate Clock Inputs (CPAB<sub>n</sub>, CPBA<sub>n</sub>) regardless of the Select or Output Enable Inputs. When SAB and SBA are in the real time transfer mode, it is also possible to store data without using the internal D flip-flops by simultaneously enabling OEAB<sub>n</sub> and  $\overline{OEBA}_n$ . In this configuration each Output reinforces its Input. Thus when all other data sources to the two sets of bus lines are in a HIGH impedance state, each set of bus lines will remain at its last state.

FIGURE 1.

### Function Table

Inputs						Inputs/Outputs (Note 1)		Operating Mode
OEAB <sub>1</sub>	$\overline{\text{OEBA}}_1$	CPAB <sub>1</sub>	CPBA <sub>1</sub>	SAB <sub>1</sub>	SBA <sub>1</sub>	A <sub>0</sub> thru A <sub>7</sub>	B <sub>0</sub> thru B <sub>7</sub>	
L	H	H or L	H or L	X	X	Input	Input	Isolation
L	H	↗	↗	X	X			Store A and B Data
X	H	↗	H or L	X	X	Input	Not Specified	Store A, Hold B
H	H	↗	↗	X	X	Input	Output	Store A in Both Registers
L	X	H or L	↗	X	X	Not Specified	Input	Hold A, Store B
L	L	↗	↗	X	X	Output	Input	Store B in Both Registers
L	L	X	X	X	L	Output	Input	Real-Time B Data to A Bus
L	L	X	H or L	X	H			Store B Data to A Bus
H	H	X	X	L	X	Input	Output	Real-Time A Data to B Bus
H	H	H or L	X	H	X			Stored A Data to B Bus
H	L	H or L	H or L	H	H	Output	Output	Stored A Data to B Bus and Stored B Data to A Bus

H = HIGH Voltage Level  
 L = LOW Voltage Level  
 X = Immaterial  
 ↗ = LOW to HIGH Clock Transition

**Note 1:** The data output functions may be enabled or disabled by various signals at OEAB or  $\overline{\text{OEBA}}$  inputs. Data input functions are always enabled, i.e., data at the bus pins will be stored on every LOW to HIGH transition on the clock inputs. This also applies to data I/O (A and B: 8–15) and #2 control pins.

### Logic Diagrams

Please note that these diagrams are provided only for the understanding of logic operations and should not be used to estimate propagation delays.

Absolute Maximum Ratings (Note 2)		Over Voltage Latchup (I/O)	10V
Storage Temperature	-65°C to +150°C	<b>Recommended Operating Conditions</b>	Free Air Ambient Temperature
Ambient Temperature under Bias	-55°C to +125°C		-40°C to +85°C
Junction Temperature under Bias	-55°C to +150°C		Supply Voltage
V <sub>CC</sub> Pin Potential to Ground Pin	-0.5V to +7.0V	Minimum Input Edge Rate ( $\Delta V/\Delta t$ )	+4.5V to +5.5V
Input Voltage (Note 3)	-0.5V to +7.0V	Data Input	50 mV/ns
Input Current (Note 3)	-30 mA to +5.0 mA	Enable Input	20 mV/ns
Voltage Applied to Any Output in the Disable or Power-Off State	-0.5V to +5.5V	Clock Input	100 mV/ns
Voltage Applied to Any Output in the HIGH State	-0.5V to V <sub>CC</sub>	<b>Note 2:</b> Absolute maximum ratings are values beyond which the device may be damaged or have its useful life impaired. Functional operation under these conditions is not implied.	
Current Applied to Output in LOW State (Max)	twice the rated I <sub>OL</sub> (mA)	<b>Note 3:</b> Either voltage limit or current limit is sufficient to protect inputs.	
DC Latchup Source Current	-500 mA
