

Chipsmall Limited consists of a professional team with an average of over 10 year of expertise in the distribution of electronic components. Based in Hongkong, we have already established firm and mutual-benefit business relationships with customers from,Europe,America and south Asia,supplying obsolete and hard-to-find components to meet their specific needs.

With the principle of “Quality Parts,Customers Priority,Honest Operation,and Considerate Service”,our business mainly focus on the distribution of electronic components. Line cards we deal with include Microchip,ALPS,ROHM,Xilinx,Pulse,ON,Everlight and Freescale. Main products comprise IC,Modules,Potentiometer,IC Socket,Relay,Connector.Our parts cover such applications as commercial,industrial, and automotives areas.

We are looking forward to setting up business relationship with you and hope to provide you with the best service and solution. Let us make a better world for our industry!

## 74ALVC162839

### Low Voltage 20-Bit Selectable Register/Buffer with 3.6V Tolerant Inputs/Outputs and 26Ω Series Resistors in the Outputs

#### General Description

The ALVC162839 contains twenty non-inverting selectable buffered or registered paths. The device can be configured to operate in a registered, or flow through buffer mode by utilizing the register enable (REGE) and Clock (CLK) signals. The device operates in a 20-bit word wide mode. All outputs can be placed into 3-STATE through use of the OE pin. These devices are ideally suited for buffered or registered 168 pin and 200 pin SDRAM DIMM memory modules.

The 74ALVC162839 is designed for low voltage (1.65V to 3.6V)  $V_{CC}$  applications with I/O compatibility up to 3.6V. The 74ALVC162839 is also designed with 26Ω series resistors in the outputs. This design reduces line noise in applications such as memory address drivers, clock drivers, and bus transceivers/transmitters.

The 74ALVC162839 is fabricated with an advanced CMOS technology to achieve high speed operation while maintaining low CMOS power dissipation.

#### Features

- Compatible with PC100 and PC133 DIMM module specifications
- 1.65V–3.6V  $V_{CC}$  supply operation
- 3.6V tolerant inputs and outputs
- 26Ω series resistors in the outputs
- $t_{PD}$  (CLK to  $O_n$ )
  - 4.6 ns max for 3.0V to 3.6V  $V_{CC}$
  - 6.3 ns max for 2.3V to 2.7V  $V_{CC}$
  - 9.8 ns max for 1.65V to 1.95V  $V_{CC}$
- Power-off high impedance inputs and outputs
- Supports live insertion and withdrawal (Note 1)
- Uses patented noise/EMI reduction circuitry
- Latchup conforms to JEDEC JED78
- ESD performance:
  - Human body model > 2000V
  - Machine model > 200V

**Note 1:** To ensure the high-impedance state during power up or power down, OE should be tied to  $V_{CC}$  through a pull-up resistor; the minimum value of the resistor is determined by the current-sourcing capability of the driver.

#### Ordering Code:

| Order Number  | Package Number | Package Description   |
|---------------|----------------|---|
| 74ALVC162839T | MTD56          | 56-Lead Thin Shrink Small Outline Package (TSSOP), JEDEC MO-153, 6.1mm Wide |

Devices also available in Tape and Reel. Specify by appending suffix letter "X" to the ordering code.

#### Logic Symbol

#### Pin Descriptions

| Pin Names        | Description                      |
|------------------|----------------------------------|
| $\overline{OE}$  | Output Enable Input (Active LOW) |
| $I_0$ – $I_{19}$ | Inputs                           |
| $O_0$ – $O_{19}$ | Outputs                          |
| CLK              | Clock Input                      |
| REGE             | Register Enable Input            |

**Connection Diagram**

**Truth Table**

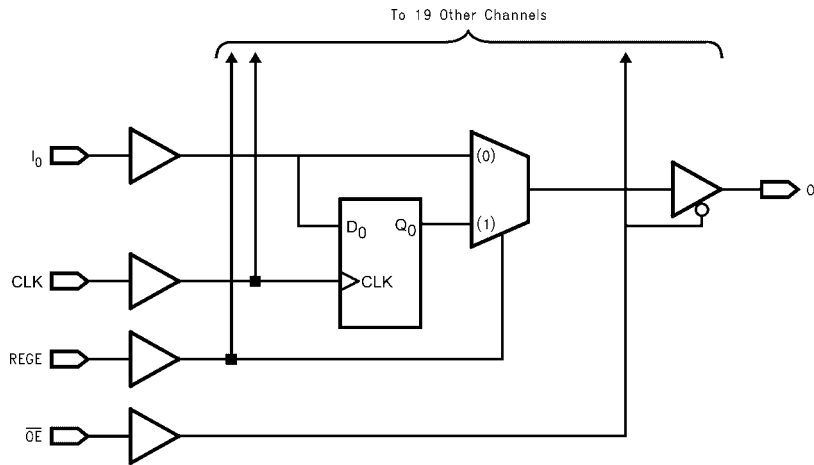

| Inputs |      |                |                 | Outputs        |
|--------|------|----------------|-----------------|----------------|
| CLK    | REGE | I <sub>n</sub> | $\overline{OE}$ | O <sub>n</sub> |
| ↑      | H    | H              | L               | H              |
| ↑      | H    | L              | L               | L              |
| X      | L    | H              | L               | H              |
| X      | L    | L              | L               | L              |
| X      | X    | X              | H               | Z              |

H = Logic HIGH  
 L = Logic LOW  
 X = Don't Care, but not floating  
 Z = High Impedance  
 ↑ = LOW-to-HIGH Clock Transition

**Functional Description**

The 74ALVC162839 consists of twenty selectable non-inverting buffers or registers with word wide modes. Mode functionality is selected through operation of the CLK and REGE pin as shown by the truth table. When REGE is held at a logic HIGH the device operates as a 20-bit register. Data is transferred from I<sub>n</sub> to O<sub>n</sub> on the rising edge of the CLK input. When the REGE pin is held at a logic LOW the device operates in a flow through mode and data propagates directly from the I<sub>n</sub> to the O<sub>n</sub> outputs. All outputs can be 3-stated by holding the  $\overline{OE}$  pin at a logic HIGH.

**Logic Diagram**

**Absolute Maximum Ratings** (Note 2)

|  |                          |
|--|--------------------------|
| Supply Voltage ( $V_{CC}$ )                                  | -0.5V to +4.6V           |
| DC Input Voltage ( $V_I$ )                                   | -0.5V to 4.6V            |
| Output Voltage ( $V_O$ ) (Note 3)                            | -0.5V to $V_{CC} + 0.5V$ |
| DC Input Diode Current ( $I_{IK}$ )                          |                          |
| $V_I < 0V$   | -50 mA                   |
| DC Output Diode Current ( $I_{OK}$ )                         |                          |
| $V_O < 0V$   | -50 mA                   |
| DC Output Source/Sink Current ( $I_{OH}/I_{OL}$ )            | $\pm 50$ mA              |
| DC $V_{CC}$ or GND Current per Supply Pin ( $I_{CC}$ or GND) | $\pm 100$ mA             |
| Storage Temperature Range ( $T_{STG}$ )                      | -65°C to +150°C          |

**Recommended Operating Conditions** (Note 4)

|   |                |
|---|----------------|
| Power Supply                                    |                |
| Operating                                       | 1.65V to 3.6V  |
| Input Voltage                                   | 0V to $V_{CC}$ |
| Output Voltage ( $V_O$ )                        | 0V to $V_{CC}$ |
| Free Air Operating Temperature ( $T_A$ )        | -40°C to +85°C |
| Minimum Input Edge Rate ( $\Delta t/\Delta V$ ) |                |
| $V_{IN} = 0.8V$ to 2.0V, $V_{CC} = 3.0V$        | 10 ns/V        |

**Note 2:** The Absolute Maximum Ratings are those values beyond which the safety of the device cannot be guaranteed. The device should not be operated at these limits. The parametric values defined in the Electrical Characteristics tables are not guaranteed at the Absolute Maximum Ratings. The "Recommended Operating Conditions" table will define the conditions for actual device operation.

**Note 3:**  $I_O$  Absolute Maximum Rating must be observed.

**Note 4:** Floating or unused control inputs must be held HIGH or LOW.

**LIFE SUPPORT POLICY**

FAIRCHILD'S PRODUCTS ARE NOT AUTHORIZED FOR USE AS CRITICAL COMPONENTS IN LIFE SUPPORT DEVICES OR SYSTEMS WITHOUT THE EXPRESS WRITTEN APPROVAL OF THE PRESIDENT OF FAIRCHILD SEMICONDUCTOR CORPORATION. As used herein:

1. Life support devices or systems are devices or systems which, (a) are intended for surgical implant into the body, or (b) support or sustain life, and (c) whose failure to perform when properly used in accordance with instructions for use provided in the labeling, can be reasonably expected to result in a significant injury to the user.
2. A critical component in any component of a life support device or system whose failure to perform can be reasonably expected to cause the failure of the life support device or system, or to affect its safety or effectiveness.
