# imall

Chipsmall Limited consists of a professional team with an average of over 10 year of expertise in the distribution of electronic components. Based in Hongkong, we have already established firm and mutual-benefit business relationships with customers from, Europe, America and south Asia, supplying obsolete and hard-to-find components to meet their specific needs.

With the principle of "Quality Parts, Customers Priority, Honest Operation, and Considerate Service", our business mainly focus on the distribution of electronic components. Line cards we deal with include Microchip, ALPS, ROHM, Xilinx, Pulse, ON, Everlight and Freescale. Main products comprise IC, Modules, Potentiometer, IC Socket, Relay, Connector. Our parts cover such applications as commercial, industrial, and automotives areas.

We are looking forward to setting up business relationship with you and hope to provide you with the best service and solution. Let us make a better world for our industry!

74F169 4-Stage Synchronous Bidirectional Counter

#### FAIRCHILD

SEMICONDUCTOR

## 74F169 4-Stage Synchronous Bidirectional Counter

#### **General Description**

The 74F169 is a fully synchronous 4-stage up/down counter. The 74F169 is a modulo-16 binary counter. Features a preset capability for programmable operation, carry lookahead for easy cascading and a U/D input to control the direction of counting. All state changes, whether in counting or parallel loading, are initiated by the LOW-to-HIGH transition of the clock.

#### Features

- Asynchronous counting and loading
- Built-in lookahead carry capability
- Presettable for programmable operation

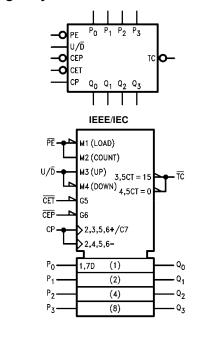

April 1988

Revised September 2000

#### **Ordering Code:**

Order Number	Package Number	Package Description			
74F169SC	M16A	16-Lead Small Outline Integrated Circuit (SOIC), JEDEC MS-012, 0.150 Narrow			
74F169SJ M16D 16-Lead Small Outline Package (SOP), EIAJ TYPE II, 5.3mm Wide					
74F169PC N16E 16-Lead Plastic Dual-In-Line Package (PDIP), JEDEC MS-001, 0.300 Wide					
Devices also available in Tape and Reel. Specify by appending the suffix letter "X" to the ordering code.					

#### **Logic Symbols**

#### **Unit Loading/Fan Out**

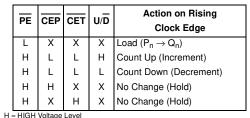

Din Nomes	Description	U.L.	Input I <sub>IH</sub> /I <sub>IL</sub>	
Pin Names	Description	HIGH/LOW	Output I <sub>OH</sub> /I <sub>OL</sub>	
CEP	Count Enable Parallel Input (Active LOW)	1.0/1.0	20 µA/-0.6 mA	
CET	Count Enable Trickle Input (Active LOW)	1.0/2.0	20 µA/-1.2 mA	
СР	Clock Pulse Input (Active Rising Edge)	1.0/1.0	20 µA/-0.6 mA	
P <sub>0</sub> -P <sub>3</sub>	Parallel Data Inputs	1.0/1.0	20 µA/-0.6 mA	
PE	Parallel Enable Input (Active LOW)	1.0/1.0	20 µA/-0.6 mA	
U/D	Up-Down Count Control Input	1.0/1.0	20 µA/-0.6 mA	
Q <sub>0</sub> –Q <sub>3</sub>	Flip-Flop Outputs	50/33.3	-1 mA/20 mA	
TC	Terminal Count Output (Active LOW)	50/33.3	-1 mA/20 mA	

#### **Functional Description**

The 74F169 uses edge-triggered J-K type flip-flops and has no constraints on changing the control or data input signals in either state of the clock. The only requirement is that the various inputs attain the desired state at least a setup time before the rising edge of the clock and remain valid for the recommended hold time thereafter. The parallel load operation takes precedence over other operations, as indicated in the Mode Select Table. When  $\overline{PE}$  is LOW, the data on the P0-P3 inputs enters the flip-flops on the next rising edge of the clock. In order for counting to occur, both CEP and CET must be LOW and PE must be HIGH; the  $U/\overline{D}$  input then determines the direction of counting. The Terminal Count (TC) output is normally HIGH and goes LOW, provided that CET is LOW, when a counter reaches zero in the Count Down mode or reaches 15 for the 74F169 in the Count Up mode. The TC output state is not a function of the Count Enable Parallel (CEP) input level. Since the  $\overline{\text{TC}}$  signal is derived by decoding the flip-flop states, there exists the possibility of decoding spikes on  $\overline{TC}$ . For this reason the use of  $\overline{TC}$  as a clock signal is not recommended (see logic equations below).

- 1. Count Enable =  $\overline{CEP} \cdot \overline{CET} \cdot \overline{PE}$
- 2. Up: (74F169):  $\overline{TC} = Q_0 \cdot Q_1 \cdot Q_2 \cdot Q_3 \cdot (Up) \cdot \overline{CET}$
- 3. Down:  $\overline{\text{TC}} = \overline{\text{Q}}_0 \cdot \overline{\text{Q}}_1 \cdot \overline{\text{Q}}_2 \cdot \overline{\text{Q}}_3 \cdot (\text{Down}) \cdot \overline{\text{CET}}$

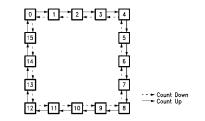

#### Mode Select Table

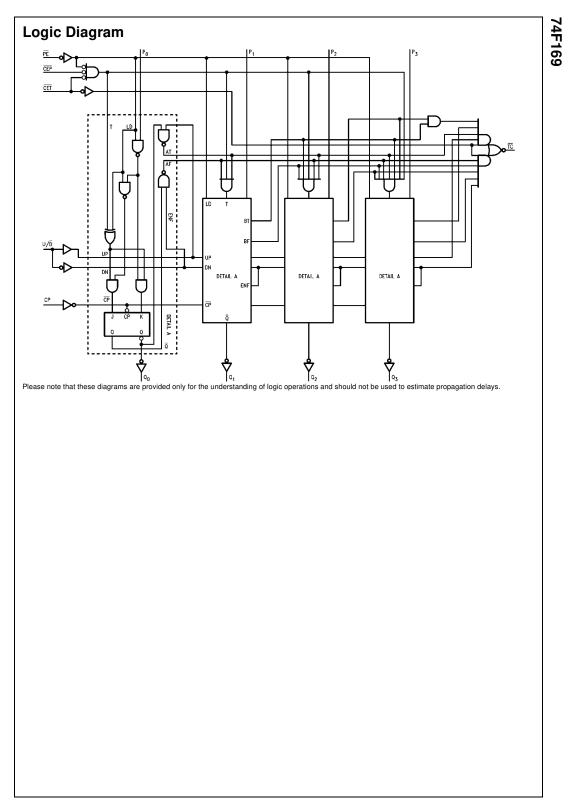

L = LOW Voltage Level

X = Immaterial

#### State Diagram

74F169

#### Absolute Maximum Ratings(Note 1)

Storage Temperature	-65°C to +150°C
Ambient Temperature under Bias	-55°C to +125°C
Junction Temperature under Bias	-55°C to +150°C
V <sub>CC</sub> Pin Potential to Ground Pin	-0.5V to +7.0V
Input Voltage (Note 2)	-0.5V to +7.0V
Input Current (Note 2)	-30 mA to +5.0 mA
Voltage Applied to Output	
in HIGH State (with $V_{CC} = 0V$ )	
Standard Output	-0.5V to V <sub>CC</sub>
3-STATE Output	-0.5V to +5.5V
Current Applied to Output	
in LOW State (Max)	twice the rated $I_{OL}$ (mA)

#### **Recommended Operating Conditions**

Free Air Ambient Temperature Supply Voltage

0°C to +70°C +4.5V to +5.5V

Note 1: Absolute maximum ratings are values beyond which the device may be damaged or have its useful life impaired. Functional operation under these conditions is not implied.

Note 2: Either voltage limit or current limit is sufficient to protect inputs.
