imall

Chipsmall Limited consists of a professional team with an average of over 10 year of expertise in the distribution of electronic components. Based in Hongkong, we have already established firm and mutual-benefit business relationships with customers from, Europe, America and south Asia, supplying obsolete and hard-to-find components to meet their specific needs.

With the principle of "Quality Parts, Customers Priority, Honest Operation, and Considerate Service", our business mainly focus on the distribution of electronic components. Line cards we deal with include Microchip, ALPS, ROHM, Xilinx, Pulse, ON, Everlight and Freescale. Main products comprise IC, Modules, Potentiometer, IC Socket, Relay, Connector. Our parts cover such applications as commercial, industrial, and automotives areas.

We are looking forward to setting up business relationship with you and hope to provide you with the best service and solution. Let us make a better world for our industry!

SEMICONDUCTOR 74F574

Octal D-Type Flip-Flop with 3-STATE Outputs

General Description

FAIRCHILD

The 74F574 is a high-speed, low power octal flip-flop with a buffered common Clock (CP) and a buffered common Output Enable ($\overline{\text{OE}}$). The information presented to the D inputs is stored in the flip-flops on the LOW-to-HIGH Clock (CP) transition.

This device is functionally identical to the 74F374 except for the pinouts.

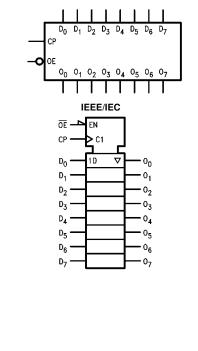

Features

- Inputs and outputs on opposite sides of package allowing easy interface with microprocessors
- Useful as input or output port for microprocessors
- Functionally identical to 74F374
- 3-STATE outputs for bus-oriented applications

Ordering Code:

Order Number	Package Number	Package Description
74F574SC	M20B	20-Lead Small Outline Integrated Circuit (SOIC), JEDEC MS-013, 0.300 Wide
74F574SJ	M20D	20-Lead Small Outline Package (SOP), EIAJ TYPE II, 5.3mm Wide
74F574PC	N20A	20-Lead Plastic Dual-In-Line Package (PDIP), JEDEC MS-001, 0.300 Wide
Devices also available	in Tape and Reel. Specify	by appending the suffix letter "X" to the ordering code.

Unit Loading/Fan Out

Pin Names	Description	U.L. HIGH/LOW	Input I _{IH} /I _{IL} Output I _{OH} /I _{OL}		
D ₀ -D ₇	Data Inputs	1.0/1.0	20 µA/–0.6 mA		
CP	Clock Pulse Input (Active LOW)	1.0/1.0	20 µA/–0.6 mA		
OE	3-STATE Output Enable Input (Active LOW)	1.0/1.0	20 µA/–0.6 mA		
O ₀ –O ₇	3-STATE Outputs	150/40 (33.3)	–3 mA/24 mA (20 mA)		

Functional Description

The 74F574 consists of eight edge-triggered flip-flops with individual D-type inputs and 3-STATE true outputs. The buffered clock and buffered Output Enable are common to all flip-flops. The eight flip-flops will store the state of their individual D inputs that meet the setup and hold times requirements on the LOW-to-HIGH Clock (CP) transition. With the Output Enable (\overline{OE}) LOW, the contents of the eight flip-flops are available at the outputs. When \overline{OE} is HIGH, the outputs go to the high impedance state. Operation of the \overline{OE} input does not affect the state of the flipflops.

Function Table

	nputs	;	Internal	Outputs	Function
OE	СР	D	Q	0	Function
Н	Н	L	NC	Z	Hold
н	н	н	NC	Z	Hold

Recommended Operating Conditions

Free Air Ambient Temperature Supply Voltage

74F574

0°C to +70°C +4.5V to +5.5V

Note 1: Absolute maximum ratings are values beyond which the device may be damaged or have its useful life impaired. Functional operation under these conditions is not implied.

Note 2: Either voltage limit or current limit is sufficient to protect inputs.
