74F583
4-Bit BCD Adder

General Description

The 'F583 high-speed 4-bit, BCD full adder with internal carry lookahead accepts two 4-bit decimal numbers (A_0–A_3, B_0–B_3) and a Carry Input (C_n). It generates the decimal sum outputs (S_0–S_3), and a Carry Output (C_{n+4}) if the sum is greater than 9. The 'F583 is the functional equivalent of the 82S83.

Features

- Adds two decimal numbers
- Full internal lookahead
- Fast ripple carry for economical expansion
- Sum output delay time 16.5 ns max
- Ripple carry delay time 8.5 ns max
- Input to ripple delay time 14.0 ns max
- Supply current 60 mA max

Functional Description

The 'F583 4-bit binary coded (BCD) full adder performs the addition of two decimal numbers (A_0–A_3, B_0–B_3). The lookahead generates the BCD carry terms internally, allowing the 'F583 to then do BCD addition correctly. For BCD numbers 0 through 9 at A and B inputs, the BCD sum forms at the output. In the addition of two BCD numbers totalling a number greater than 9, a valid BCD number and a carry will result.

For input values larger than 9, the number is converted from binary to BCD. Binary to BCD conversion occurs by grounding one set of inputs, A_n or B_n, and applying any 4-bit binary number to the other set of inputs. If the input is between 0 and 9, a BCD number occurs at the output. If the binary input falls between 10 and 15, a carry term is generated. Both the carry term and the sum are the BCD equivalent of the binary input. Converting binary numbers greater than 16 may be achieved through cascading 'F583s.
