# imall

Chipsmall Limited consists of a professional team with an average of over 10 year of expertise in the distribution of electronic components. Based in Hongkong, we have already established firm and mutual-benefit business relationships with customers from, Europe, America and south Asia, supplying obsolete and hard-to-find components to meet their specific needs.

With the principle of "Quality Parts, Customers Priority, Honest Operation, and Considerate Service", our business mainly focus on the distribution of electronic components. Line cards we deal with include Microchip, ALPS, ROHM, Xilinx, Pulse, ON, Everlight and Freescale. Main products comprise IC, Modules, Potentiometer, IC Socket, Relay, Connector. Our parts cover such applications as commercial, industrial, and automotives areas.

We are looking forward to setting up business relationship with you and hope to provide you with the best service and solution. Let us make a better world for our industry!

# 3.3V CMOS OCTAL BIDIRECTIONAL TRANSCEIVER

#### **FEATURES:**

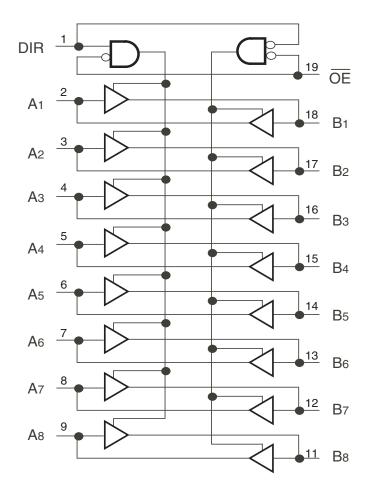

- 0.5 MICRON CMOS Technology
- ESD > 2000V per MIL-STD-883, Method 3015; > 200V using machine model (C = 200pF, R = 0)
- Vcc = 3.3V ±0.3V, Normal Range
- Vcc = 2.7V to 3.6V, Extended Range
- CMOS power levels (0.4µW typ. static)
- · Rail-to-Rail output swing for increased noise margin
- Available in QSOP and TSSOP packages

# **DESCRIPTION:**

The FCT3245/A octal transceivers are built using advanced dual metal CMOS technology. These high-speed, low-power transceivers are ideal for asynchronous communication between two buses (A and B). The direction control pin (DIR) controls the direction of data flow. The output enable pin ( $\overline{OE}$ ) overrides the direction control and disables both ports. All inputs are designed with hysteresis for improved noise margin.

The FCT3245/A has series current limiting resistors. These offer low ground bounce, minimal undershoot, and controlled output fall times-reducing the need for external series terminating resistors.

# ABSOLUTE MAXIMUM RATINGS<sup>(1)</sup>

| Symbol               | Description                          | Max             | Unit |
|----------------------|--------------------------------------|-----------------|------|
| VTERM <sup>(2)</sup> | Terminal Voltage with Respect to GND | -0.5 to +4.6    | V    |
| VTERM <sup>(3)</sup> | Terminal Voltage with Respect to GND | –0.5 to +7      | V    |
| VTERM <sup>(4)</sup> | Terminal Voltage with Respect to GND | -0.5 to Vcc+0.5 | V    |
| Tstg                 | Storage Temperature                  | -65 to +150     | °C   |
| Ιουτ                 | DC Output Current                    | -60 to +60      | mA   |

#### NOTES:

- Stresses greater than those listed under ABSOLUTE MAXIMUM RATINGS may cause permanent damage to the device. This is a stress rating only and functional operation of the device at these or any other conditions above those indicated in the operational sections of this specification is not implied. Exposure to absolute maximum rating conditions for extended periods may affect reliability.
- 2. Vcc terminals.
- 3. Input terminals.
- 4. Outputs and I/O terminals.

#### CAPACITANCE (TA = +25°C, F = 1.0MHz)

| Symbol | Parameter <sup>(1)</sup> Conditions |           | Тур. | Max. | Unit |
|--------|-------------------------------------|-----------|------|------|------|
| CIN    | Input Capacitance                   | VIN = 0V  | 3.5  | 6    | рF   |
| Соит   | Output Capacitance                  | Vout = 0V | 4    | 8    | рF   |

NOTE:

1. This parameter is measured at characterization but not tested.

## **PIN DESCRIPTION**

| Pin Names | Description                               |
|-----------|---|
| ŌĒ        | 3-State Output Enable Inputs (Active LOW) |
| DIR       | Direction Control Output                  |
| Ax        | Side A Inputs or 3-State Outputs          |
| Bx        | Side B Inputs or 3-State Outputs          |

#### **FUNCTION TABLE(1)**

| Inp | outs |                     |
|-----|------|---------------------|
| ŌĒ  | DIR  | Outputs             |
| L   | L    | Bus B Data to Bus A |
| L   | Н    | Bus A Data to Bus B |
| H X |      | HighZState          |

NOTE:

1. H = HIGH Voltage Level

X = Don't Care

L = LOW Voltage Level

Z = High Impedance

NOTES:

1. For conditions shown as Min. or Max., use appropriate value specified under Electrical Characteristics for the applicable device type.

2. Typical values are at Vcc = 3.3V, +25°C ambient and maximum loading.

3. Not more than one output should be tested at one time. Duration of the test should not exceed one second.

4. This parameter is guaranteed but not tested.

5. VOH = Vcc - 0.6V at rated current.

NOTES:

1. For conditions shown as Min. or Max., use appropriate value specified under Electrical Characteristics for the applicable device type.

2. Typical values are at Vcc = 3.3V, +25°C ambient.

3. Per TTL driven input. All other inputs at Vcc or GND.

4. This parameter is not directly testable, but is derived for use in Total Power Supply Calculations.

5. Values for these conditions are examples of  $\Delta lcc$  formula. These limits are guaranteed but not tested.

6. IC = IQUIESCENT + INPUTS + IDYNAMIC

IC = ICC +  $\Delta$ ICC DHNT + ICCD (fCPNCP/2 + fiNi)

Icc = Quiescent Current (Icc, IccH, and Iccz)

 $\Delta \text{Icc}$  = Power Supply Current for a TTL High Input

DH = Duty Cycle for TTL Inputs High

N⊤ = Number of TTL Inputs at DH

ICCD = Dynamic Current caused by an Input Transition Pair (HLH or LHL)

fcp = Clock Frequency for register devices (zero for non-register devices)

NCP = Number of clock inputs at fCP

Ni = Number of Inputs at fi

NOTES:

1. Propagation Delays and Enable/Disable times are with Vcc = 3.3V ±0.3V, Normal Range. For Vcc = 2.7V to 3.6V, Extended Range, all Propagation Delays and Enable/ Disable times should be degraded by 20%.

2. See test circuit and waveforms.

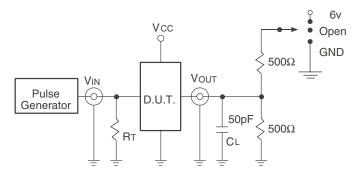

3. Minimum limits are guaranteed but not tested on Propagation Delays.

4. This parameter is guaranteed but not tested.

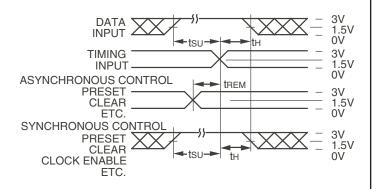

fi = Input Frequency

#### NOTES:

- 1. Diagram shown for input Control Enable-LOW and input Control Disable-HIGH.
- 2. Pulse Generator for All Pulses: Rate  $\leq$  1.0MHz; Zo  $\leq$  50 $\Omega$ ; tF  $\leq$  2.5ns; tR  $\leq$  2.5ns.
- 3. If Vcc is below 3V, input voltage swings should be adjusted not to exceed Vcc.
