

Chipsmall Limited consists of a professional team with an average of over 10 year of expertise in the distribution of electronic components. Based in Hongkong, we have already established firm and mutual-benefit business relationships with customers from, Europe, America and south Asia, supplying obsolete and hard-to-find components to meet their specific needs.

With the principle of "Quality Parts, Customers Priority, Honest Operation, and Considerate Service", our business mainly focus on the distribution of electronic components. Line cards we deal with include Microchip, ALPS, ROHM, Xilinx, Pulse, ON, Everlight and Freescale. Main products comprise IC, Modules, Potentiometer, IC Socket, Relay, Connector. Our parts cover such applications as commercial, industrial, and automotives areas.

We are looking forward to setting up business relationship with you and hope to provide you with the best service and solution. Let us make a better world for our industry!

Important notice

Dear Customer,

On 7 February 2017 the former NXP Standard Product business became a new company with the tradename **Nexperia**. Nexperia is an industry leading supplier of Discrete, Logic and PowerMOS semiconductors with its focus on the automotive, industrial, computing, consumer and wearable application markets

In data sheets and application notes which still contain NXP or Philips Semiconductors references, use the references to Nexperia, as shown below.

Instead of http://www.nxp.com, http://www.nxp.com, http://www.nexperia.com, http://www.nexperia.com,

Instead of sales.addresses@www.nxp.com or sales.addresses@www.semiconductors.philips.com, use salesaddresses@nexperia.com (email)

Replace the copyright notice at the bottom of each page or elsewhere in the document, depending on the version, as shown below:

- © NXP N.V. (year). All rights reserved or © Koninklijke Philips Electronics N.V. (year). All rights reserved

Should be replaced with:

- © Nexperia B.V. (year). All rights reserved.

If you have any questions related to the data sheet, please contact our nearest sales office via e-mail or telephone (details via **salesaddresses@nexperia.com**). Thank you for your cooperation and understanding,

Kind regards,

Team Nexperia

74HC/HCT85 4-bit magnitude comparator

Product specification
File under Integrated Circuits, IC06

December 1990

74HC/HCT85

FEATURES

- · Serial or parallel expansion without extra gating
- Magnitude comparison of any binary words
- · Output capability: standard
- I_{CC} category: MSI

GENERAL DESCRIPTION

The 74HC/HCT85 are high-speed Si-gate CMOS devices and are pin compatible with low power Schottky TTL (LSTTL). They are specified in compliance with JEDEC standard no. 7A.

The 74HC/HCT85 are 4-bit magnitude comparators that can be expanded to almost any length. They perform comparison of two 4-bit binary, BCD or other monotonic codes and present the three possible magnitude results at the outputs ($Q_{A>B}$, $Q_{A=B}$ and $Q_{A<B}$). The 4-bit inputs are

weighted (A_0 to A_3 and B_0 to B_3), where A_3 and B_3 are the most significant bits.

The operation of the "85" is described in the function table, showing all possible logic conditions. The upper part of the table describes the normal operation under all conditions that will occur in a single device or in a series expansion scheme. In the upper part of the table the three outputs are mutually exclusive. In the lower part of the table, the outputs reflect the feed forward conditions that exist in the parallel expansion scheme.

For proper compare operation the expander inputs ($I_{A>B}$, $I_{A=B}$ and $I_{A<B}$) to the least significant position must be connected as follows: $I_{A<B} = I_{A>B} = LOW$ and $I_{A=B} = HIGH$.

For words greater than 4-bits, units can be cascaded by connecting outputs $Q_{A < B}$, $Q_{A > B}$ and $Q_{A = B}$ to the corresponding inputs of the significant comparator.

QUICK REFERENCE DATA

 $GND = 0 V; T_{amb} = 25 °C; t_r = t_f = 6 ns$

SYMBOL	PARAMETER	CONDITIONS	TYP	LINUT	
STWIBUL	PARAMETER	CONDITIONS	нс	22 20 15 15 3.5 20	UNIT
t _{PHL} / t _{PLH}	propagation delay	C _L = 15 pF; V _{CC} = 5 V			
	A_n , B_n to $Q_{A>B}$, Q_{A		20	22	ns
	A_n , B_n to $Q_{A=B}$		18	20	ns
	$I_{A < B,}$ $I_{A=B}$, $I_{A > B}$ to $Q_{A < B}$, $Q_{A > B}$		15	15	ns
	I _{A=B} to Q _{A=B}		11	15	ns
C _I	input capacitance		3.5	3.5	pF
C _{PD}	power dissipation capacitance per package	notes 1 and 2	18	20	pF

Notes

1. C_{PD} is used to determine the dynamic power dissipation (P_D in μW):

$$P_D = C_{PD} \times V_{CC}^2 \times f_i + \sum (C_L \times V_{CC}^2 \times f_o)$$
 where:

f_i = input frequency in MHz

fo = output frequency in MHz

 $\sum (C_1 \times V_{CC}^2 \times f_0) = \text{sum of outputs}$

C_L = output load capacitance in pF

V_{CC} = supply voltage in V

2. For HC the condition is $V_1 = GND$ to V_{CC} For HCT the condition is $V_1 = GND$ to $V_{CC} - 1.5$ V

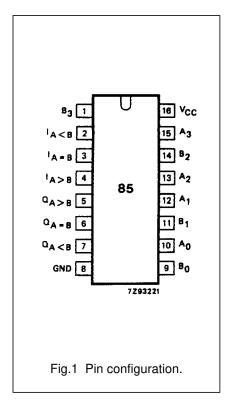

ORDERING INFORMATION

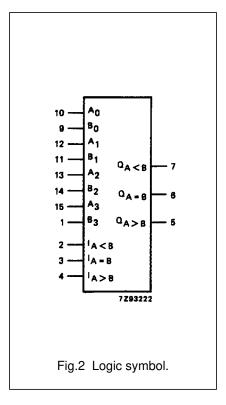

See "74HC/HCT/HCU/HCMOS Logic Package Information".

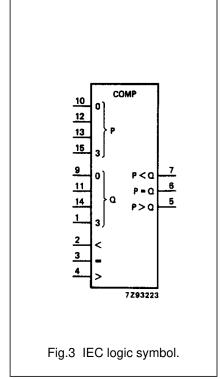

74HC/HCT85

PIN DESCRIPTION

PIN NO.	SYMBOL	NAME AND FUNCTION
2	I _{A<b< sub=""></b<>}	A < B expansion input
3	$I_{A=B}$	A = B expansion input
4	I _{A>B}	A > B expansion input
5	Q _{A>B}	A > B output
6	$Q_{A=B}$	A = B output
7	$Q_{A < B}$	A < B output
8	GND	ground (0 V)
9, 11, 14, 1,	B ₀ to B ₃	word B inputs
10, 12, 13, 15	A ₀ to A ₃	word A inputs
16	V _{CC}	positive supply voltage

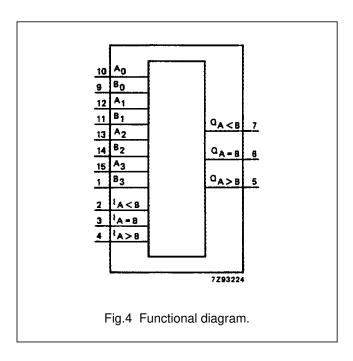

4-bit magnitude comparator

74HC/HCT85

APPLICATIONS

- Process controllers
- Servo-motor control

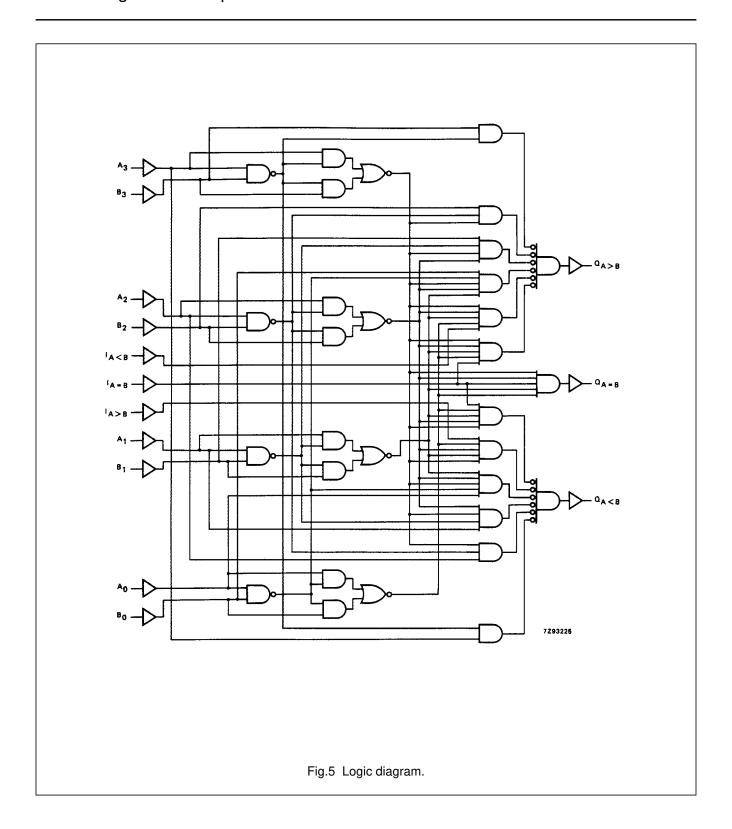

FUNCTION TABLE

COMPARING INPUTS				C	ASCADING	INPUTS		OUTPUTS

DC CHARACTERISTICS FOR 74HCT

For the DC characteristics see "74HC/HCT/HCU/HCMOS Logic Family Specifications".

Output capability: standard

I_{CC} category: MSI

Note to HCT types

The value of additional quiescent supply current (ΔI_{CC}) for a unit load of 1 is given in the family specifications. To determine ΔI_{CC} per input, multiply this value by the unit load coefficient shown in the table below.

INPUT	UNIT LOAD COEFFICIENT
I _{A<b< sub=""></b<>}	1.00
I _{A<b< sub=""> I_{A>B}</b<>}	1.00
	1.50
A _n , B _n	1.50
