### DESCRIPTION

The 74LCX245 is a low voltage CMOS OCTAL BUS TRANSCEIVER (3-STATE) fabricated with sub-micron silicon gate and double-layer metal wiring C<sup>2</sup>MOS technology. It is ideal for low power and high speed 3.3V applications; it can be interfaced to 5V signal environment for both inputs and outputs.

### ORDER CODES

| PACKAGE | TUBE      | T & R       |
|---------|-----------|-------------|
| SOP     | 74LCX245M | 74LCX245MTR |
| TSSOP   |           | 74LCX245TTR |

It has same speed performance at 3.3V than 5V AC/ACT family, combined with a lower power consumption.

This IC is intended for two way asynchronous communication between data buses; the direction of data transmission is determined by DIR input. The enable input  $\bar{G}$  can be used to disable the device so that the buses are effectively isolated. All inputs and outputs are equipped with protection circuits against static discharge, giving them 2KV ESD immunity and transient excess voltage.

All floating bus terminals during High Z state must be held HIGH or LOW.

2) Parameter guaranteed by design

Average operating current can be obtained by the following equation. I<sub>CC(opr)</sub> = C<sub>PD</sub> × V<sub>CC</sub> × f<sub>IN</sub> + I<sub>CC</sub>/8 (per circuit)
