

Chipsmall Limited consists of a professional team with an average of over 10 year of expertise in the distribution of electronic components. Based in Hongkong, we have already established firm and mutual-benefit business relationships with customers from, Europe, America and south Asia, supplying obsolete and hard-to-find components to meet their specific needs.

With the principle of "Quality Parts, Customers Priority, Honest Operation, and Considerate Service", our business mainly focus on the distribution of electronic components. Line cards we deal with include Microchip, ALPS, ROHM, Xilinx, Pulse, ON, Everlight and Freescale. Main products comprise IC, Modules, Potentiometer, IC Socket, Relay, Connector. Our parts cover such applications as commercial, industrial, and automotives areas.

We are looking forward to setting up business relationship with you and hope to provide you with the best service and solution. Let us make a better world for our industry!

3.3V CMOS 16-BIT BUS
TRANSCEIVER/REGISTER
WITH 3-STATE OUTPUTS,
5 VOLT TOLERANT I/O ANI

IDT74LVCH16646A
NOT RECOMMENDED
FOR NEW DESIGNS

5 VOLT TOLERANT I/O AND BUS-HOLD

## **FEATURES:**

- Typical tsk(o) (Output Skew) < 250ps
- ESD > 2000V per MIL-STD-883, Method 3015; > 200V using machine model (C = 200pF, R = 0)
- Vcc = 3.3V ± 0.3V, Normal Range
- Vcc = 2.7V to 3.6V, Extended Range
- CMOS power levels (0.4 W typ. static)
- · All inputs, outputs, and I/O are 5V tolerant
- · Supports hot insertion
- Available in TSSOP package

## **DRIVE FEATURES:**

- · High Output Drivers: ±24mA
- · Reduced system switching noise

### **APPLICATIONS:**

- 5V and 3.3V mixed voltage systems
- · Data communication and telecommunication systems

## **DESCRIPTION:**

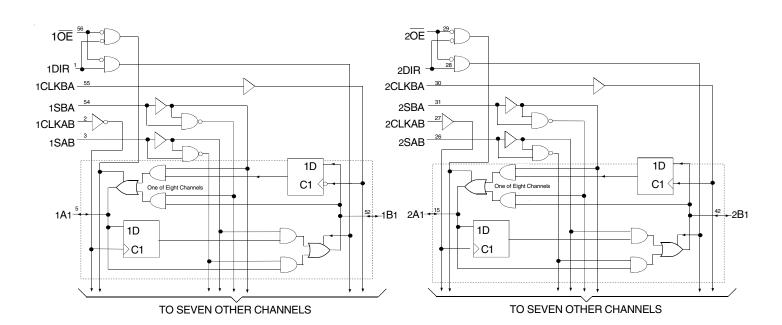

The LVCH16646A 16-bit bus transceiver and register is built using advanced dual metal CMOS technology. This high-speed, low power device is organized as two independent 8-bit D-type transceivers with 3-state D-type registers. The controls circuitry is organized for multiplexed transmission of data between A bus and B bus either directly or from the internal storage registers. Each 8-bit transceiver/register features direction control (DIR), over-riding Output Enable control ( $\overline{\text{OE}}$ ) and Select lines (SAB and SBA) to select either real-time data or stored data. Separate clock inputs are provided for A and B port registers. Data on the A or B data bus, or both, can be stored in the internal registers by the low-to-high transitions at the appropriate clock pins. Flow-through organization of signal pins simplifies layout. All inputs are designed with hysteresis for improved noise margin.

All pins can be driven from either 3.3V or 5V devices. This feature allows the use of this device as a translator in a mixed 3.3V/5V supply system.

The LVCH16646A has been designed with a ±24mA output driver. This driver is capable of driving a moderate to heavy load while maintaining speed performance.

The LVCH16646A has "bus-hold" which retains the inputs' last state whenever the input goes to a high impedance. This prevents floating inputs and eliminates the need for pull-up/down resistors.

## **ABSOLUTE MAXIMUM RATINGS**(1)

| Symbol     | Description                                   | Max          | Unit |
|------------|---|--------------|------|
| VTERM      | Terminal Voltage with Respect to GND          | -0.5 to +6.5 | ٧    |
| Tstg       | Storage Temperature                           | -65 to +150  | °C   |
| lout       | DC Output Current                             | -50 to +50   | mA   |
| lik<br>lok | Continuous Clamp Current,<br>VI < 0 or Vo < 0 | -50          | mA   |
| lcc<br>Iss | Continuous Current through each Vcc or GND    | ±100         | mA   |

#### NOTE:

 Stresses greater than those listed under ABSOLUTE MAXIMUM RATINGS may cause permanent damage to the device. This is a stress rating only and functional operation of the device at these or any other conditions above those indicated in the operational sections of this specification is not implied. Exposure to absolute maximum rating conditions for extended periods may affect reliability.

## **CAPACITANCE** (TA = +25°C, F = 1.0MHz)

| Symbol | Parameter <sup>(1)</sup> | Conditions | Тур. | Max. | Unit |
|--------|--------------------------|------------|------|------|------|
| CIN    | Input Capacitance        | VIN = 0V   | 4.5  | 6    | рF   |
| Соит   | Output Capacitance       | Vout = 0V  | 6.5  | 8    | рF   |
| CI/O   | I/O Port Capacitance     | VIN = 0V   | 6.5  | 8    | рF   |

#### NOTE:

1. As applicable to the device type.

## **PIN DESCRIPTION**

| Pin Names      | Description                           |
|----------------|---------------------------------------|
| xAx            | Data Register A Inputs <sup>(1)</sup> |
|                | Data Register B Outputs               |
| xBx            | Data Register B Inputs <sup>(1)</sup> |
|                | Data Register A Outputs               |
| xCLKAB, xCLKBA | Clock Pulse Inputs                    |
| xSAB, xSBA     | Output Data Source Select Inputs      |
| xŌĒ            | Output Enable Inputs                  |
| xDIR           | Direction Control Inputs              |

#### NOTE:

1. These pins have "Bus-Hold". All other pins are standard inputs, outputs, or I/Os.

## **FUNCTION TABLE**(1)

| L   | L      | Χ        | Χ        | Х    | L    | Output      | Input              | Real time B data to A bus |
| L   | L      | Χ        | H or L   | Χ    | Н    | Output      | Input              | Stored B data to A bus    |
| L   | Н      | Χ        | Χ        | Ĺ    | Х    | Input       | Output             | Real time A data to B bus |
| L   | Н      | H or L   | Х        | Н    | Х    | Input       | Output             | Stored A data to B bus    |

#### NOTES:

- 1. H = HIGH Voltage Level
  - X = Don't Care
  - L = LOW Voltage Level
  - ↑ = LOW-to-HIGH transition
- 2. The data output functions may be enabled or disabled by various signals at the xOE or xDIR inputs. Data input functions are always enabled, i.e. data at the bus pins will be stored on every LOW-to-HIGH transition of the clock inputs.

## DC ELECTRICAL CHARACTERISTICS OVER OPERATING RANGE

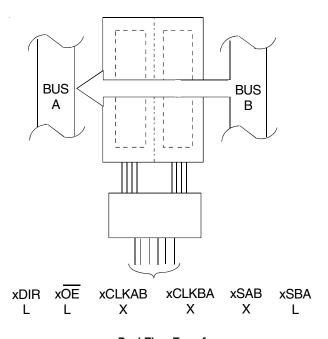

Following Conditions Apply Unless Otherwise Specified:

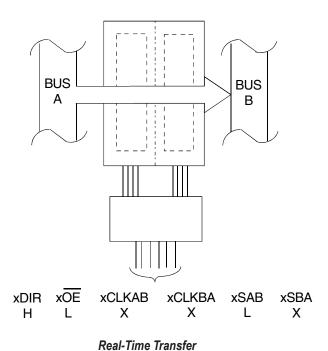

Operating Condition: TA = -40°C to +85°C

## NOTES:

<sup>1.</sup> See TEST CIRCUITS AND WAVEFORMS. TA = -40°C to + 85°C.

<sup>2.</sup> Skew between any two outputs of the same package and switching in the same direction.

# TEST CIRCUITS AND WAVEFORMS TEST CONDITIONS

| Symbol | Vcc <sup>(1)</sup> =3.3V±0.3V | Vcc <sup>(1)</sup> =2.7V | Vcc <sup>(2)</sup> =2.5V±0.2V | Unit |

Test Circuit for All Outputs

#### **DEFINITIONS:**

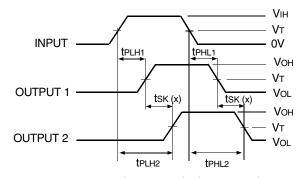

CL = Load capacitance: includes jig and probe capacitance.

 $\mbox{\it RT}$  = Termination resistance: should be equal to  $\mbox{\it ZOUT}$  of the Pulse Generator.  $\mbox{\it NOTES}$ :

- 1. Pulse Generator for All Pulses: Rate  $\leq$  10MHz; tF  $\leq$  2.5ns; tR  $\leq$  2.5ns.
- 2. Pulse Generator for All Pulses: Rate  $\leq$  10MHz; tF  $\leq$  2ns; tR  $\leq$  2ns.

## **SWITCH POSITION**

| Test                                    | Switch |
|---|--------|
| Open Drain<br>Disable Low<br>Enable Low | Vload  |
| Disable High<br>Enable High             | GND    |
| All Other Tests                         | Open   |

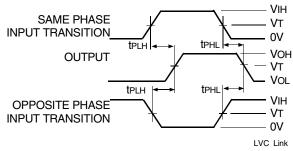

tsk(x) = |tplh2 - tplh1| or |tphl2 - tphl1|

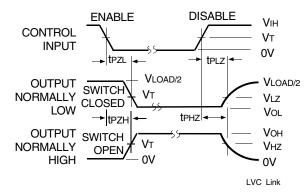

Output Skew - tsk(x)

#### NOTES:

- 1. For tsk(o) OUTPUT1 and OUTPUT2 are any two outputs.
- 2. For tsk(b) OUTPUT1 and OUTPUT2 are in the same bank.

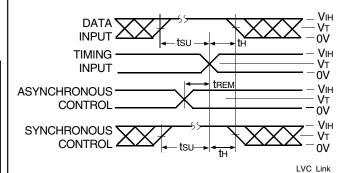

## Propagation Delay

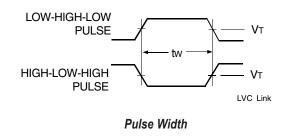

#### **Enable and Disable Times**

#### NOTE:

1. Diagram shown for input Control Enable-LOW and input Control Disable-HIGH.

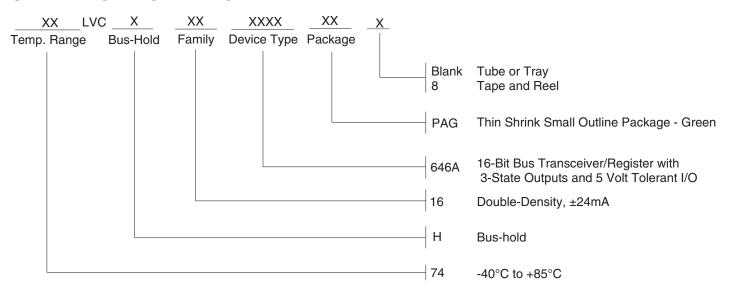

Set-up, Hold, and Release Times
