Chipsmall Limited consists of a professional team with an average of over 10 year of expertise in the distribution of electronic components. Based in Hongkong, we have already established firm and mutual-benefit business relationships with customers from,Europe,America and south Asia,supplying obsolete and hard-to-find components to meet their specific needs.

With the principle of “Quality Parts,Customers Priority,Honest Operation,and Considerate Service”,our business mainly focus on the distribution of electronic components. Line cards we deal with include Microchip,ALPS,ROHM,Xilinx,Pulse,ON,Everlight and Freescale. Main products comprise IC,Modules,Potentiometer,IC Socket,Relay,Connector.Our parts cover such applications as commercial,industrial, and automotives areas.

We are looking forward to setting up business relationship with you and hope to provide you with the best service and solution. Let us make a better world for our industry!

74LVX3245
8-Bit, Dual-Supply Translating Transceiver with 3-State Outputs

Features

- Bidirectional Interface Between 3 V and 5 V Buses
- Inputs Compatible with TTL Level
- 3 V Data Flow at A-Port and 5 V Data Flow at B-Port
- Outputs Source / Sink: 24 mA
- Guaranteed Simultaneous Switching Noise Level and Dynamic Threshold Performance
- Implements Proprietary EMI Reduction Circuitry
- Functionally Compatible with the 74 Series 245

Description

The 74LVX3245 is a dual-supply, 8-bit translating transceiver designed to interface between a 3 V bus and a 5 V bus in a mixed 5 V supply environment. The Transmit/ Receive (T/R) input determines the direction of data flow. Transmit (active-HIGH) enables data from A-ports to B-ports; receive (active-LOW) enables data from B-ports to A-ports. The output enable input, when HIGH, disables both A- and B-ports by placing them in a high-impedance condition. The A-port interfaces with the 3 V bus; the B-port interfaces with the 5 V bus.

The 74LVX3245 is suitable for mixed-voltage applications, such as notebook computers using 3.3 V CPU and 5V peripheral components.

Absolute Maximum Ratings

Stresses exceeding the absolute maximum ratings may damage the device. The device may not function or be operable above the recommended operating conditions and stressing the parts to these levels is not recommended. In addition, extended exposure to stresses above the recommended operating conditions may affect device reliability. The absolute maximum ratings are stress ratings only.

8-Bit Dual-Supply Translating Transceiver

The 74LVX3245 is a dual-supply device capable of bi-directional signal translation. This level shifting ability provides an efficient interface between low-voltage CPU local bus with memory and a standard bus defined by 5 V I/O levels. The device control inputs can be controlled by the low-voltage CPU and core logic or a bus arbitrator with 5 V I/O levels.

Manufactured on a sub-micron CMOS process, the 74LVX3245 is ideal for mixed voltage applications such as notebook computers using 3.3 V CPUs and 5 V peripheral devices.

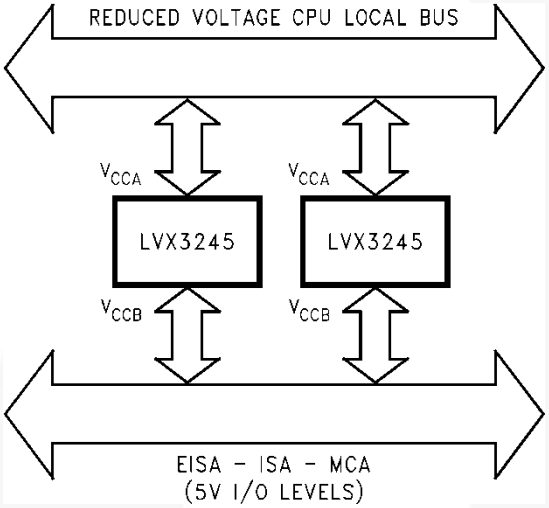

Figure 4. Application Example

Power-Up Considerations

To ensure that the system does not experience unnecessary I_{CC} current draw, bus contention, or oscillations during power up; the following guidelines should be followed to *(refer to Table 2)*:

- Power up the control side of the device first (V_{CCA}).
- /OE should ramp with or ahead of V_{CCA}. This helps guard against bus contention.
- The Transmit/Receive (T/R) control pin should ramp with V_{CCA}. This ensures that the A-port data pins are configured as inputs. With V_{CCA} receiving power first, the I/O port should be configured as an input to help guard against bus contention and oscillations.
- A-side data inputs should be driven to a valid logic level. This prevents excessive current draw.

The above steps ensure that there are no bus contentions or oscillations, and therefore no excessive current draw occurs during the power-up cycling. These steps help prevent possible damage to the translator devices and potential damage to other system components.
