imall

Chipsmall Limited consists of a professional team with an average of over 10 year of expertise in the distribution of electronic components. Based in Hongkong, we have already established firm and mutual-benefit business relationships with customers from, Europe, America and south Asia, supplying obsolete and hard-to-find components to meet their specific needs.

With the principle of "Quality Parts, Customers Priority, Honest Operation, and Considerate Service", our business mainly focus on the distribution of electronic components. Line cards we deal with include Microchip, ALPS, ROHM, Xilinx, Pulse, ON, Everlight and Freescale. Main products comprise IC, Modules, Potentiometer, IC Socket, Relay, Connector. Our parts cover such applications as commercial, industrial, and automotives areas.

We are looking forward to setting up business relationship with you and hope to provide you with the best service and solution. Let us make a better world for our industry!

FAIRCHILD

SEMICONDUCTOR

74VCX162240

Low Voltage 16-Bit Inverting Buffer/Line Driver with 3.6V Tolerant Inputs and Outputs and 26 Ω Series Resistors in Outputs

General Description

The VCX162240 contains sixteen inverting buffers with 3-STATE outputs to be employed as a memory and address driver, clock driver, or bus oriented transmitter/ receiver. The device is nibble (4-bit) controlled. Each nibble has separate 3-STATE control inputs which can be shorted together for full 16-bit operation.

The 74VCX162240 is designed for low voltage (1.4V to 3.6V) V_{CC} applications with I/O capability up to 3.6V. The 74VCX162240 is also designed with 26Ω series resistors in the outputs. This design reduces line noise in applications such as memory address drivers, clock drivers, and bus transceivers/transmitters.

The 74VCX162240 is fabricated with an advanced CMOS technology to achieve high speed operation while maintaining low CMOS power dissipation.

Features

- 1.4V to 3.6V V_{CC} supply operation
- 3.6V tolerant inputs and outputs
- 26Ω series resistors in outputs
- t_{PD}
 - 3.3 ns max for 3.0V to 3.6V V_{CC}
- Power-off high impedance inputs and outputs
- Supports live insertion and withdrawal (Note 1)
- Static Drive (I_{OH}/I_{OL}) ±12 mA @ 3.0V V_{CC}
- Uses patented noise/EMI reduction circuitry
- Latch-up performance exceeds 300 mA
- ESD performance:

Pin Descriptions

Human body model > 2000V Machine model > 200V

Note 1: To ensure the high-impedance state during power up or power down, $\overline{\text{OE}}$ should be tied to V_{CC} through a pull-up resistor; the minimum value of the resistor is determined by the current-sourcing capability of the driver

Functional Description

Logic Diagram

The 74VCX162240 contains sixteen inverting buffers with 3-STATE outputs. The device is nibble (4 bits) controlled with each nibble functioning identically, but independent of each other. The control pins may be shorted together to obtain full 16-bit operation. The 3-STATE outputs are controlled by an Output Enable (\overline{OE}_n) input. When \overline{OE}_n is LOW, the outputs are in the 2-state mode. When \overline{OE}_n is HIGH, the standard outputs are in the high impedance mode but this does not interfere with entering new data into the inputs.

OE, OE 08 012-15 One of Eight

Absolute Maximum Ratings(Note 2)				
Supply Voltage (V _{CC})	-0.5V to +4.6V	Со		
DC Input Voltage (VI)	-0.5V to +4.6V	Pov		
Output Voltage (V _O)		C		
Outputs 3-STATED	-0.5V to +4.6V	D		
Outputs Active (Note 3)	–0.5V to V _{CC} +0.5V	Inpu		
DC Input Diode Current $(I_{IK}) V_I < 0V$	–50.0 mA	Out		
DC Output Diode Current (I _{OK})		C		
$V_{O} < 0V$	–50.0 mA	C		
$V_{O} > V_{CC}$	+50.0 mA	Out

$V_{CC} = 2.3V$ to 2.7V	±8.0 mA					
V _{CC} = 1.65V to 2.3V	±3.0 mA					
V _{CC} = 1.4V to 1.6V	±2.0 mA					
Free Air Operating Temperature (T _A)	-40°C to +85°C					

74VCX162240

Minimum Input Edge Rate (\triangle t/\Delta V)

 $V_{IN} = 0.8V$ to 2.0V, $V_{CC} = 3.0V$ 10.0 ns/V

Note 2: The Absolute Maximum Ratings are those values beyond which the safety of the device cannot be guaranteed. The device should not be operated at these limits. The parametric values defined in the Electrical Characteristics tables are not guaranteed at the Absolute Maximum Ratings. The "Recommended Operating Conditions" table will define the conditions for actual device operation.

Note 3: I_{O} Absolute Maximum Rating must be observed.

Note 4: Floating or unused inputs must be held HIGH or LOW.
