imall

Chipsmall Limited consists of a professional team with an average of over 10 year of expertise in the distribution of electronic components. Based in Hongkong, we have already established firm and mutual-benefit business relationships with customers from, Europe, America and south Asia, supplying obsolete and hard-to-find components to meet their specific needs.

With the principle of "Quality Parts, Customers Priority, Honest Operation, and Considerate Service", our business mainly focus on the distribution of electronic components. Line cards we deal with include Microchip, ALPS, ROHM, Xilinx, Pulse, ON, Everlight and Freescale. Main products comprise IC, Modules, Potentiometer, IC Socket, Relay, Connector. Our parts cover such applications as commercial, industrial, and automotives areas.

We are looking forward to setting up business relationship with you and hope to provide you with the best service and solution. Let us make a better world for our industry!

ON Semiconductor®

To learn more about ON Semiconductor, please visit our website at <u>www.onsemi.com</u>

Please note: As part of the Fairchild Semiconductor integration, some of the Fairchild orderable part numbers will need to change in order to meet ON Semiconductor's system requirements. Since the ON Semiconductor product management systems do not have the ability to manage part nomenclature that utilizes an underscore (_), the underscore (_) in the Fairchild part numbers will be changed to a dash (-). This document may contain device numbers with an underscore (_). Please check the ON Semiconductor website to verify the updated device numbers. The most current and up-to-date ordering information can be found at www.onsemi.com. Please email any questions regarding the system integration to Fairchild_questions@onsemi.com.

74VCX163245 Low Voltage 16-Bit Dual Supply Translating Transceiver with 3-STATE Outputs

Features

- Bidirectional interface between busses ranging from 1.65V to 3.6V
- Supports Live Insertion and Withdrawal⁽¹⁾
- Static Drive (I_{OH}/I_{OL})
 - ±24mA @ 3.0V V_{CC}
 - ±18mA @ 2.3V V_{CC}
 - ±6mA @ 1.65V V_{CC}
- Uses proprietary Quiet Series[™] noise/EMI reduction circuitry
- Functionally compatible with 74 series 16245
- Latchup performance exceeds 300mA
- ESD performance:
 - Human Body Model >2000V
 - Machine model >200V
- Also packaged in plastic Fine-Pitch Ball Grid Array (FBGA)

Note:

 To ensure the high impedance state during power up or power down, OE_n should be tied to V_{CCB} through a pull up resistor. The minimum value of the resistor is determined by the current sourcing capability of the driver.

General Description

The VCX163245 is a dual supply, 16-bit translating transceiver that is designed for 2 way asynchronous communication between busses at different supply voltages by providing true signal translation. The supply rails consist of V_{CCA} , which is a higher potential rail operating at 2.3V to 3.6V and V_{CCB} , which is the lower potential rail operating at 1.65V to 2.7V. (V_{CCB} must be less than or equal to V_{CCA} for proper device operation). This dual supply design allows for translation from 1.8V to 2.5V busses to busses at a higher potential, up to 3.3V.

The Transmit/Receive (T/\overline{R}) input determines the direction of data flow. Transmit (active-HIGH) enables data from A Ports to B Ports; Receive (active-LOW) enables data from B Ports to A Ports. The Output Enable (\overline{OE}) input, when HIGH, disables both A and B Ports by placing them in a High-Z condition. The A Port interfaces with the higher voltage bus (2.7V to 3.3V); The B Port interfaces with the lower voltage bus (1.8V to 2.5V). Also the VCX163245 is designed so that the control pins $(T/\overline{R}_n, \overline{OE}_n)$ are supplied by V_{CCB}.

The 74VCX163245 is suitable for mixed voltage applications such as notebook computers using a 1.8V CPU and 3.3V peripheral components. It is fabricated with an Advanced CMOS technology to achieve high speed operation while maintaining low CMOS power dissipation.

Ordering Information

Order Number Package Number		Package Description
74VCX163245G ⁽²⁾⁽³⁾	BGA54A	54-Ball Fine-Pitch Ball Grid Array (FBGA), JEDEC MO-205, 5.5mm Wide
74VCX163245MTD ⁽³⁾	MTD48	48-Lead Thin Shrink Small Outline Package (TSSOP), JEDEC MO-153, 6.1mm Wide

Notes:

2. Ordering code "G" indicates Trays.

3. Device also available in Tape and Reel. Specify by appending the suffix letter "X" to the ordering code.

VCX163245 Translator Power Up Sequence Recommendations

To guard against power up problems, some simple guidelines need to be adhered to. The VCX163245 is designed so that the control pins (T/ \overline{R}_n , \overline{OE}_n) are supplied by V_{CCB}. Therefore the first recommendation is to begin by powering up the control side of the device, V_{CCB}. The \overline{OE}_n control pins should be ramped with or ahead of V_{CCB}, this will guard against bus contentions and oscillations as all A Port and B Port outputs will be disabled. To ensure the high impedance state during power up or power down, \overline{OE}_n should be tied to V_{CCB} through a pull up resistor. The minimum value of the resistor is determined by the current sourcing capability of the driver. Second, the T/ \overline{R}_n control pins should be

placed at logic LOW (0V) level, this will ensure that the B-side bus pins are configured as inputs to help guard against bus contention and oscillations. B-side Data Inputs should be driven to a valid logic level (0V or V_{CCB}), this will prevent excessive current draw and oscillations. V_{CCA} can then be powered up after V_{CCB} , however V_{CCA} must be greater than or equal to V_{CCB} to ensure proper device operation. Upon completion of these steps the device can then be configured for the users desired operation. Following these steps will help to prevent possible damage to the translator device as well as other system components.

Logic Diagrams

Please note that these diagrams are provided only for the understanding of logic operations and should not be used to estimate propagation delays.

Absolute Maximum Ratings

Stresses exceeding the absolute maximum ratings may damage the device. The device may not function or be operable above the recommended operating conditions and stressing the parts to these levels is not recommended. In addition, extended exposure to stresses above the recommended operating conditions may affect device reliability. The absolute maximum ratings are stress ratings only.

Symbol	Parameter	Rating
V _{CCA}	Supply Voltage	-0.5V to +4.6V
V _{CCB}		–0.5V to V _{CCA}
VI	DC Input Voltage	-0.5V to +4.6V
V _{I/O}	DC Output Voltage	
	Outputs 3-STATE	-0.5V to +4.6V
	A _n Output Active ⁽⁴⁾	–0.5V to V _{CCA} + 0.5V
	B _n Output Active ⁽⁴⁾	–0.5V to V _{CCB} + 0.5V
I _{IK}	DC Input Diode Current, V _I < 0V	–50mA
I _{OK}	DC Output Diode Current	
	V _O < 0V	–50mA
	V _O > V _{CC}	+50mA
I _{OH} /I _{OL}	DC Output Source/Sink Current	±50mA
	DC V _{CC} or Ground Current	±100mA
I _{CC} or Ground	Supply Pin	
T _{STG}	Storage Temperature	–65°C to +150°C

Recommended Operating Conditions⁽⁵⁾

The Recommended Operating Conditions table defines the conditions for actual device operation. Recommended operating conditions are specified to ensure optimal performance to the datasheet specifications. Fairchild does not recommend exceeding them or designing to absolute maximum ratings.

Symbol	Parameter	Rating
V _{CCA}	Power Supply ⁽⁶⁾	2.3V to 3.6V
V _{CCB}		1.65V to 2.7V
VI	Input Voltage () @ OE, T/R	0V to V _{CCB}
V _{I/O}	Input/Output Voltage ()	
	A _n	0V to V _{CCA}
	B _n	0V to V _{CCB}
I _{OH} /I _{OL}	Output Current in I _{OH} /I _{OL}	
	V _{CCA} = 3.0V to 3.6V	±24mA
	V _{CCA} = 2.3V to 2.7V	±18mA
	$V_{CCB} = 2.3V$ to 2.7V	±18mA
	V _{CCB} = 1.65V to 1.95V	±6mA
T _A	Free Air Operating Temperature	-40°C to +85°C
$\Delta t / \Delta V$	Minimum Input Edge Rate, $V_{IN} = 0.8V$ to 2.0V, $V_{CC} = 3.0V$	10ns/V

Notes:

4. I_O Absolute Maximum Rating must be observed.

5. Unused inputs or I/O pins must be held HIGH or LOW. They may not float.

6. Operation requires: $V_{CCB} \leq V_{CCA}$

DISCLAIMER

FAIRCHILD SEMICONDUCTOR RESERVES THE RIGHT TO MAKE CHANGES WITHOUT FURTHER NOTICE TO ANY PRODUCTS HEREIN TO IMPROVE RELIABILITY, FUNCTION OR DESIGN. FAIRCHILD DOES NOT ASSUME ANY LIABILITY ARISING OUT OF THE APPLICATION OR USE OF ANY PRODUCT OR CIRCUIT DESCRIBED HEREIN; NEITHER DOES IT CONVEY ANY LICENSE UNDER ITS PATENT RIGHTS, NOR THE RIGHTS OF OTHERS. THESE SPECIFICATIONS DO NOT EXPAND THE TERMS OF FAIRCHILD'S WORLDWIDE TERMS AND CONDITIONS, SPECIFICALLY THE WARRANTY THEREIN, WHICH COVERS THESE PRODUCTS.

LIFE SUPPORT POLICY

FAIRCHILD'S PRODUCTS ARE NOT AUTHORIZED FOR USE AS CRITICAL COMPONENTS IN LIFE SUPPORT DEVICES OR SYSTEMS WITHOUT THE EXPRESS WRITTEN APPROVAL OF FAIRCHILD SEMICONDUCTOR CORPORATION.

As used herein:

- Life support devices or systems are devices or systems which, (a) are intended for surgical implant into the body or (b) support or sustain life, and (c) whose failure to perform when properly used in accordance with instructions for use provided in the labeling, can be reasonably expected to result in a significant injury of the user.
- 2. A critical component in any component of a life support, device, or system whose failure to perform can be reasonably expected to cause the failure of the life support device or system, or to affect its safety or effectiveness.

PRODUCT STATUS DEFINITIONS

Definition of Terms

Datasheet Identification	Product Status	Definition This datasheet contains the design specifications for product development. Specifications may change in any manner without notice.	
Advance Information	Formative or In Design		
Preliminary	First Production	This datasheet contains preliminary data; supplementary data will be published at a later date. Fairchild Semiconductor reserves the right to make changes at any time without notice to improve design.	
No Identification Needed	Full Production	This datasheet contains final specifications. Fairchild Semiconductor reserves the right to make changes at any time without notice to improve design.	
Obsolete	Not In Production	This datasheet contains specifications on a product that has been discontinued by Fairchild Semiconductor. The datasheet is printed for reference information only.	

ON Semiconductor and are trademarks of Semiconductor Components Industries, LLC dba ON Semiconductor or its subsidiaries in the United States and/or other countries. ON Semiconductor owns the rights to a number of patents, trademarks, copyrights, trade secrets, and other intellectual property. A listing of ON Semiconductor's product/patent coverage may be accessed at <u>www.onsemi.com/site/pdf/Patent-Marking.pdf</u>. ON Semiconductor reserves the right to make changes without further notice to any products herein. ON Semiconductor makes no warranty, representation or guarantee regarding the suitability of its products for any particular purpose, nor does ON Semiconductor assume any liability arising out of the application or use of any product or circuit, and specifically disclaims any and all liability, including without limitation special, consequential or incidental damages. Buyer is responsible for its products and applications using ON Semiconductor products, including compliance with all laws, regulations and safety requirements or standards, regardless of any support or applications information provided by ON Semiconductor. "Typical" parameters which may be provided in ON Semiconductor data sheets and/or specifications can and do vary in different applications and actual performance may vary over time. All operating parameters, including "Typicals" must be validated for each customer application by customer's technical experts. ON Semiconductor does not convey any license under its patent rights of others. ON Semiconductor products are not designed, intended, or authorized for use as a critical component in life support systems or any FDA Class 3 medical devices or medical devices with a same or similar classification in a foreign jurisdiction or any devices intended for implantation in the human body. Should Buyer purchase or use ON Semiconductor has against all claims, costs, damages, and expenses, and reasonable attorney fees arising out of, directly or indirectly, any claim of personal injury or death ass
