imall

Chipsmall Limited consists of a professional team with an average of over 10 year of expertise in the distribution of electronic components. Based in Hongkong, we have already established firm and mutual-benefit business relationships with customers from, Europe, America and south Asia, supplying obsolete and hard-to-find components to meet their specific needs.

With the principle of "Quality Parts, Customers Priority, Honest Operation, and Considerate Service", our business mainly focus on the distribution of electronic components. Line cards we deal with include Microchip, ALPS, ROHM, Xilinx, Pulse, ON, Everlight and Freescale. Main products comprise IC, Modules, Potentiometer, IC Socket, Relay, Connector. Our parts cover such applications as commercial, industrial, and automotives areas.

We are looking forward to setting up business relationship with you and hope to provide you with the best service and solution. Let us make a better world for our industry!

74VCXF162835 Low Voltage 18-Bit Universal Bus Driver with 3.6V Tolerant Outputs and 26 Ω Series Resistors in Outputs

General Description

The VCXF162835 low voltage 18-bit universal bus driver combines D-type latches and D-type flip-flops to allow data flow in transparent, latched and clocked modes.

Data flow is controlled by output-enable (\overline{OE}) , latch-enable (LE), and clock (CLK) inputs. The device operates in Transparent Mode when LE is held HIGH. The device operates in clocked mode when LE is LOW and CLK is toggled. Data transfers from the Inputs (I_n) to Outputs (O_n) on a Positive Edge Transition of the Clock. When \overline{OE} is LOW, the output data is enabled. When \overline{OE} is HIGH the output port is in a high impedance state.

The VCXF162835 is designed with 26Ω series resistors in the outputs. This design reduces noise in applications such as memory address drivers, clock drivers, and bus transceivers/transmitters.

The 74VCXF162835 is designed for low voltage (1.65V to 3.6V) V_{CC} applications with I/O capability up to 3.6V.

The 74VCXF162835 is fabricated with an advanced CMOS technology to achieve high speed operation while maintaining low CMOS power dissipation.

Features

- Compatible with PC133 DIMM module specifications
- 1.65V–3.6V V_{CC} specifications provided
- 3.6V tolerant outputs
- **26** Ω series resistors in outputs
- t_{PD} (CLK to O_n)
 - 3.2 ns max for 3.0V to 3.6V V_{CC} 4.1 ns max for 2.3V to 2.7V V_{CC} 7.4 ns max for 1.65V to 1.95V V_{CC}
- Power-down high impedance outputs
- Static Drive (I_{OH}/I_{OL}) ±12 mA @ 3.0V V_{CC} ±8 mA @ 2.3V V_{CC} ±3 mA @ 1.65V V_{CC}
- Latchup performance exceeds 300 mA
- ESD performance: Human body model > 2000V Machine model >200V

Note 4: The "Absolute Maximum Ratings" are those values beyond which the safety of the device cannot be guaranteed. The device should not be operated at these limits. The parametric values defined in the Electrical Characteristics tables are not guaranteed at the Absolute Maximum Ratings. The Recommended Operating Conditions tables will define the conditions for actual device operation.

Note 5: I_O Absolute Maximum Rating must be observed.

Note 6: Inputs do not have over-voltage tolerance.

Note 7: Floating or unused pin (inputs or I/O's) must be held HIGH or LOW.
