

Chipsmall Limited consists of a professional team with an average of over 10 year of expertise in the distribution of electronic components. Based in Hongkong, we have already established firm and mutual-benefit business relationships with customers from,Europe,America and south Asia,supplying obsolete and hard-to-find components to meet their specific needs.

With the principle of “Quality Parts,Customers Priority,Honest Operation,and Considerate Service”,our business mainly focus on the distribution of electronic components. Line cards we deal with include Microchip,ALPS,ROHM,Xilinx,Pulse,ON,Everlight and Freescale. Main products comprise IC,Modules,Potentiometer,IC Socket,Relay,Connector.Our parts cover such applications as commercial,industrial, and automotives areas.

We are looking forward to setting up business relationship with you and hope to provide you with the best service and solution. Let us make a better world for our industry!

Description

The 8330S *Silver Conductive Epoxy Adhesive: Slow Cure / Extreme Conductivity* is an electronic grade epoxy that combines long working time and high conductivity with ease of use. It has a convenient 1-to-1 mix ratio and 240 minutes (4 h) working life, which once mixed behaves essentially like a 1-part adhesive for the duration of a work shift. However, unlike 1-part adhesives that often require high heat (130–170 °C), it will cure at 65 °C in 120 minutes.

The cured conductive adhesive bonds very well to most substrates used in electronic assemblies, resists thermal and mechanical shocks, and provides the low resistivity needed for many operating conditions. The 8330S epoxy adhesive forms excellent high conductivity seals, bonds, and traces for electronic devices in automobile, aerospace, marine, communication, and industrial control.

Applications & Usages

The 8330S epoxy has many uses in the production, repair and assembly of electronics in microelectronics and optoelectronics. It has been designed for production environments as a replacement for one part silver conductive epoxy systems when high cure temperatures can potentially damage heat sensitive components, or where frozen storage requirements or shelf life of one part epoxies are a concern. Like all conductive epoxies, it operates as a lead free replacement for metal solder, and it excels at bonding heat-sensitive electronic components. It also provides excellent EMI/RFI shielding and is very effective at filling seams between metal plates.

Benefits and Features

- **Excellent 0.0007 Ω·cm electrical resistivity and 1.75 W/(m·K) thermal conductivity**
- **Easy 1:1 mix ratio and long working time**—may be mixed once and then used as a 1-part epoxy for a four hour production shift
- **Optimal cure temperature of only 65 °C**—lower than most 1-part epoxies and suitable for use on heat sensitive components
- **Stores and ships at room temperature**—no freezing or dry ice required
- **Very long shelf life of at least two years**—even when stored at room temperature
- **Strong water and chemical resistance** to brine, acids, bases, and aliphatic hydrocarbons
- **Room temperature cure is possible** (96 hours)
- **Excellent adhesion to most electronic substrates**

ENVIRONMENT
✓ RoHS
✓ REACH compliant

Curing & Work Schedule

Properties	Value
Working Life ^{a)}	240 min (4 h)
Shelf Life	≥3 y
Full Cure @22 °C [72 °F]	96 h
Full Cure @65 °C [149 °F]	120 min (2 h)
Full Cure @80 °C [176 °F]	60 min (1 h)

a) Working life value assume 5 g and room temperature unless stated otherwise.

Temperature Service Range

Properties	Value
Constant Service Temperature	-40 °C to 150 °C [-40 °F to 302 °F]
Storage Temperature of Unmixed Parts	22 to 27 °C [72 to 80 °F]

Properties of Cured 8330S

Physical Properties	Method	Value ^{a)}
Color	Visual	Silvery Grey
Density @ 26 °C [79 °F]		2.82 g/cm ³
Hardness	(Shore D durometer)	73D
Tensile Strength	ASTM D 638	9.0 N/mm ² [1 300 lb/in ²]
Elongation	"	7.8%
Compressive Strength	ASTM D 695	36.0 N/mm ² [5 200 lb/in ²]
Lap Shear Strength (Stainless Steel 304)	ASTM D 1002	1.3 N/mm ² [190 lb/in ²]
(Aluminum 5052)	"	2.6 N/mm ² [380 lb/in ²]
Water absorption		0.32%
Outgassing (Total Mass Loss) @ 24 h	ASTM E 595	0.40 %
Water vapor release (WVR)	"	0.14 %
Collectable Volatile Condensable Material	"	0.03%
Solderable	—	No
Electric Properties ^{b)}	Method	Value
Volume Resistivity After 65 °C [149 °F] cure	Method 5011.5 in MIL-STD-883H	0.0007 Ω·cm
Thermal Properties	Method	Value
Thermal Conductivity @25 °C	ASTM E 1461	1.748 W/(m·K)
@50 °C	"	1.750 W/(m·K)
@100 °C	"	1.684 W/(m·K)
Glass Transition Temperature (T _g)	ASTM D 3418	34 °C [93 °F]
CTE ^{c)} prior T _g	ASTM E 831	97 ppm/°C
CTE ^{c)} after T _g	ASTM E 831	208 ppm/°C
Specific Heat @25 °C [77 °F]		0.787 J/(g·K)

Note: Specifications are for epoxy samples that were cured at 65 °C for 1 hour. Additional curing time at room temperature was given to allow for optimum curing. Samples were conditioned at 23 °C and 50% RH prior to most tests.

a) N/mm² = mPa; lb/in² = psi

b) The uncured epoxy mixture does not conduct electricity well and can have high resistance. To attain stated resistivity, ensure that the mix ratio is followed and that the product is fully cured by heat curing. Room temperature cures may give higher resistivity.

c) Coefficient of Thermal Expansion (CTE) units are in ppm/°C = in/in/°C × 10⁻⁶ = unit/unit/°C × 10⁻⁶

d) To be determined

Principal Components

Name	CAS Number
Part A: Epoxide Resin	28768-32-3 + 17557-23-3
Metallic Silver	7440-22-4
Part B: Aliphatic Amines	68082-29-1, 112-24-3, 68541-13-9, 4246-51-9
Metallic Silver	7440-22-4

Compatibility

Adhesion—As seen in the substrate adhesion table, the 8330S epoxy adheres to most materials found on printed circuit assemblies; however, it is not compatible with contaminants like water, oil, and greasy flux residues that may affect adhesion. If contamination is present, clean the printed circuit assembly with electronic cleaner such as MG Chemicals 4050 Safety Wash, 406B Superwash, or 824 Isopropyl Alcohol.

Substrate Adhesion in Decreasing Order

<i>Physical Properties</i>	<i>Adhesion</i>	
Steel	Stronger	
Aluminum		
Fiberglass		
Wood		
Paper, Fiber		
Glass		
Rubber		
Polycarbonate		
Acrylic		
Polypropylene ^{a)}		Weaker

a) Does not bond to polypropylene

Storage

Store between 22 and 27 °C [72 and 80 °F] in dry area away from sunlight. Prolonged storage or storage at or near freezing temperatures can result in crystallization. If crystallization occurs, reconstitute the component to its original state by temporarily warming it to 50 to 60 °C [122 to 140 °F]. To ensure full homogeneity, stir thoroughly the warm component, reincorporating all settled material. Re-secure container lid and let cool down before use.

Health, Safety, and Environmental Awareness

Please see the 8330S **Safety Data Sheet** (SDS) parts A and B for more details on transportation, storage, handling and other security guidelines.

Health and Safety: The 8330S parts can ignite if the liquid is both heated and exposed to flames or sparks.

Wear safety glasses or goggles and disposable polyvinyl chloride, neoprene, or nitrile gloves while handling liquids. Part B in particular causes skin burns and may cause sensitization if exposed over a long period of time. The epoxy will not wash off once cured: wear protective work clothing. Wash hands thoroughly after use or if skin contact occurs. Do not ingest.

Use in well-ventilated area since vapors may cause irritation of the respiratory tract and cause respiratory sensitization in susceptible individuals.

The cured epoxy resin presents no known hazard.

0 (Low or none); 1 (Slight); 2 (Moderate); 3 (Serious); 4 (Severe)

Application Instructions

Follow the procedure below for best results. For mixing quantities that are less than 1 mL size or for stricter stoichiometry control, mix by weight ratio instead (requires a high precision balance). Heat cure is recommended to get the best possible conductivity.

To prepare 1:1 (A:B) epoxy mixture

1. Remove cap or cover.
2. For jars, stir each part individually to re-incorporate material that may have separated during storage.
3. Measure **one** part by volume of **A**.
4. Measure **one** part by volume of **B**.
5. Thoroughly mix the parts together with a stir stick until homogeneous.
6. Apply to with an appropriate sized stick for the application area.

CAUTION!

Do not cross contaminate. To avoid premature curing, use different stirring tools for parts A & B.

NOTE: Remember to recap the syringe or container promptly after use.

TIP: Due to the high viscosity and abrasiveness of the silver filler, you may preheat part A and part B to increase the flow and improve air release, but doing so will reduce the working time by about half for each 10 °C increments.

To heat cure the 8330S epoxy

Put in oven at 65 °C [149 °F] for 120 minutes or above. For optimum conductivity and faster cure, heat cure at temperatures up to 100 °C.

TIP: Hair dryers are normally rated not to exceed 60 °C, so they can generally be used to accelerate the cure.

You can cure the epoxy faster by using higher temperatures of up to 100 °C [302 °F].

Burlington, Ontario, Canada QMI File # 004008

Silver Conductive Epoxy Adhesive

Slow Cure / Extreme Conductivity

8330S Technical Data Sheet

8330S

ATTENTION: Keep the curing temperature well below temperature limit of heat sensitive components that may be present. As a guideline, remember that commercial grade devices normally can be safely operated up to 70 °C, industrial grade up to 85 °C, and military grade up to 175 °C.

ATTENTION: Heat guns can easily exceed the temperature limits for your assembly: they should not be used.

To room temperature cure the 8330S epoxy

Let stand for 96 hours or more.

TIP: While the product can be cured at room temperature, the best conductivity is achieved with the application of heat.
