## : ©hipsmall

Chipsmall Limited consists of a professional team with an average of over 10 year of expertise in the distribution of electronic components. Based in Hongkong, we have already established firm and mutual-benefit business relationships with customers from,Europe,America and south Asia,supplying obsolete and hard-to-find components to meet their specific needs.

With the principle of "Quality Parts,Customers Priority,Honest Operation, and Considerate Service",our business mainly focus on the distribution of electronic components. Line cards we deal with include Microchip,ALPS,ROHM,Xilinx,Pulse,ON,Everlight and Freescale. Main products comprise IC,Modules,Potentiometer,IC Socket,Relay,Connector.Our parts cover such applications as commercial,industrial, and automotives areas.

We are looking forward to setting up business relationship with you and hope to provide you with the best service and solution. Let us make a better world for our industry!

## Weidmüller DK 4 and DKT 4 terminals

are suitable for the installation of electronic components with a maximum diameter or width of 4.5 mm . Four independent clamping yoke screw connections are available. A snap-on frame expands the installation space in the DK4 by 6 mm respectively. Depending on type, these modular terminals are suitable for mounting on TS 32, TS $35 \times 7.5$ or TS $35 \times 15$ mounting rails according to European standards EN 50 035 and EN 50022.

## Weidmüller WDK 2.5 terminals

are suitable for the installation of electrical components with a maximum width of 4 mm . As many as four independent clamping yoke screw connections or $46.3 \times 0.8$ tab connections are available. These terminals are suitable for mounting on TS $35 \times$ 7.5 or TS $35 \times 15$ mounting rails.

## Weidmüller EG 1 housings

offer 4 screw connections and, as accessories, up to $40.8 \times 4.8 \mathrm{~mm}$ solder/tab connections on a width of 18 mm . The screw clamp busbar ends with a solder ring inside the housing. Two end plates seal the module. Depending on type, the modules are mounted on TS 32, TS 35 x 7.5 or TS $35 \times 15$ mounting rails.

## Weidmüller EG 2 housings

The external shape of these housings corresponds to Type EG 1. Four screw connections or up to $80.8 \times 6.6 \mathrm{~mm} / 0.8 \times$ 2.8 mm tab connectors are connected with a printed circuit board in the housing. They can be mounted on TS 32, TS 35 x 7.5 or TS $35 \times 15$ mounting rails.

## Weidmüller EG 3 housings

provides 6 screw connections or 12 $0.8 \times 6.3 \mathrm{~mm} / 0.8 \times 2.8 \mathrm{~mm}$ tab connections on a width of 22.5 mm . As an accessory, Weidmüller offers a shaped printed circuit board with a 2.54 mm hole grid or fully copper-coated. The engagable combination foot allows the terminal to be mounted on TS 32, TS $35 \times 7.5$ or TS $35 \times 15$ mounting rails.
The MPL mounting plate is used to mount the housing directly (without mounting rail). Due to the sliding foot construction, the EG 3 can be turned through $180^{\circ}$ in all types of assembly (e.g. exchanging input and output).

## Weidmüller EG 4 housing

as type EG 3, offers the same width of 22.5 mm . However, the greater installation depth ( 75 mm ) and height ( 109 mm ) allow the installation of more complex circuit configurations. The built-in installation can be connected via 6 screw connections.
The snap-on combination foot allows the terminal to be mounted on TS 32, TS $35 \times$ 7.5 or TS $35 \times 15$ mounting rails. Due to the sliding foot construction, the EG 4 can be slid forwards or backwards on the locking foot, and can be turned through $180^{\circ}$ (e.g. exchanging of input and output).

## Weidmüller EG 5 housings

correspond to type EG 4. The EG 5 has 12 screw connections, which can be wired with solder lugs inside the housing. The snap-on combination foot allows the terminal to be mounted on TS 32, TS $35 \times$ 7.5 or TS $35 \times 15$ mounting rails. Due to the sliding foot construction, the EG 4 can be slid 6 mm forwards or backwards on the engaging foot and can be turned through $180^{\circ}$ (e.g. exchanging input and output).

## Weidmüller EG 6 housings

have a bus-suitable contact carrier. The bus connection is created by directly mounting several housings in a row. 32 connections are available on both sides of the housing as crimp connector block contacts. The housing accepts printed circuit boards with dimensions of $100 \times 120$ mm . The printed circuit board is adapted with a VG 64 DIN strip. The front panel is screwed onto the circuit board similar to the 19" technology. The locking foot allows easy mounting onto the TS 35 mounting rail.

## Weidmüller SEG/U housing

enable the plug-in module assembly of a $70 \times 52 \times 1 \mathrm{~mm}$ printed circuit board. The circuit board is attached to the accessory cover plate via snap-in hooks. The housing contains a 13-pole socket block for installation of the module; 6 screw connections are available for connection. The permissible power loss in the housing during continuous operation of terminals in rows amounts to 1.5 W , depending on the surface temperature of the soldered components. The snap-on combination foot allows the housings to be mounted on TS 32 , TS $35 \times 7.5$ or TS $35 \times 15$ mounting rails.

## Weidmüller housings type WAVEBOX

It is essential to provide fit-for-use housings for modern electronic components. Setting and control functions must be easily carried out and technical requirements with respect to heat dissipation and EMV properties should be supported.
An ideal design saves space and wiring costs in the switchgear cabinet. In addition, ergonomics and design are becoming increasingly important for highquality electronic products.
These are the criteria that led to the development of WAVEBOX. Simplified production methods (shaft soldering, SMD) ensure cost-savings for the customer.
The WAVEBOX is characterised by:

- Optimum width for any application
(12.5 mm, $17.5 \mathrm{~mm}, 22.5 \mathrm{~mm}$ )
- Large component assembly surface; SMDs can be mounted on the solder side
- UL94 flammability class V2
- No tools required for assembly
- Plug-in printed circuit board
- Plug-in cross-connection via ZQV 2.5 N
- Hinged, transparent cover
- BLZ 5.08 screw/plug and socket connector
- BLFZ 5.08 optional tension clamp/plug and socket connector
- Marking option with WS tags
- Mounts onto TS 35

Weidmüller individual parts for RS 70 locking socket
latch together to form units from 20 mm in width. Any desired intermediate parts or feet can be connected between two side pieces (locking feet) at intervals of 5 mm . In this way, a carrier module is constructed for PCB, on which various components can be soldered. The assembly snaps onto TS 32, TS $35 \times 7.5$ or TS $35 \times 15$ mounting rails.

## The Weidmüller RSX custom circuit module

is a largely prefabricated unit wich accepts up to 5 components such as resistors, diodes, varistors or capacitors via soldering terminals. The components are connected via screw clamps or tab connections. This module is also suitable for mounting on TS 32 , TS $35 \times 7.5$ or TS $35 \times 15$ mounting rails.

## Weidmüller locking socket profiles

The RS 45, RS 80 and RS 100 profiles are available as 2 m long strips. The extruded profiles can be easily cut to any length with a saw. In this way, a carrier module is constructed for a printed circuit board on which various components can be soldered. Locking feet can be slid into these profiles for mounting on TS 32, TS
$35 \times 7.5$ or TS $35 \times 15$ mounting rails. The
sliding foot construction of the RS 80 also
allows the fixing foot be turned through $180^{\circ}$.
