## **89BSD** Digital Output

### **SPECIFICATIONS**

- Stainless Steel with O-Ring Seal
- Pressure/Temperature Read-Out
- Digital Output (24-bit DS ADC)
- ASIC Calibrated
- Absolute, Sealed Gage
- 9mm Diameter

The 89BSD is a 9mm diameter small profile, media compatible, piezoresistive silicon pressure sensor packaged in a 316L stainless steel housing. This low power 24-bit DS ADC digital output pressure sensor supports an I<sup>2</sup>C interface protocol and is designed for threaded o-ring mounting. A custom ASIC is used for temperature compensation and offset correction. The sensing package utilizes silicone oil to transfer pressure from the 316L stainless steel diaphragm to the sensing element. A flex cable allows the 89BSD to connect to a smaller connection terminal where size is of primary concern.

The 89BSD is designed for high performance, low pressure applications.

For a similar sensor with a plastic threaded fitting, refer to the LM pressure transducer

#### Notes

 Coefficients must be read by microcontroller software and are to be used in a mathematical calculation for converting D1 and D2 into compensated pressure and temperature values. For calculation methods and coefficients, see application note APP-01006.

2. Output is not ratiometric to supply voltage.

3. Oversampling ratio: 256 / 512 / 1024 / 2048 / 4096. See Table 2.

4. 2X or 400psi, whichever is less. The maximum pressure that can be applied without changing the transducer's performance or accuracy.

5. 3X or 600psi, whichever is less. The maximum pressure that can be applied to a transducer without rupture of either the sensing element or transducer.

6. Output protocol is I<sup>2</sup>C only. CSB is tied to GND, setting I<sup>2</sup>C address: 0x77 (1110111)
