Chipsmall

Chipsmall Limited consists of a professional team with an average of over 10 year of expertise in the distribution of electronic components. Based in Hongkong, we have already established firm and mutual-benefit business relationships with customers from,Europe,America and south Asia,supplying obsolete and hard-to-find components to meet their specific needs.

With the principle of "Quality Parts,Customers Priority,Honest Operation,and Considerate Service",our business mainly focus on the distribution of electronic components. Line cards we deal with include Microchip,ALPS,ROHM,Xilinx,Pulse,ON,Everlight and Freescale. Main products comprise IC,Modules,Potentiometer,IC Socket,Relay,Connector.Our parts cover such applications as commercial,industrial, and automotives areas.

We are looking forward to setting up business relationship with you and hope to provide you with the best service and solution. Let us make a better world for our industry!

Device Overview

The 89HPES32NT8BG2 is a member of the IDT family of PCI Express® switching solutions. The PES32NT8BG2 is a 32-lane, 8-port system interconnect switch optimized for PCI Express Gen2 packet switching in high-performance applications, supporting multiple simultaneous peer-to-peer traffic flows. Target applications include multi-host or intelligent I/O based systems where inter-domain communication is required, such as servers, storage, communications, and embedded systems.

Features

- ◆ **High Performance Non-Blocking Switch Architecture**
  - 32-lane, 8-port PCIe switch with flexible port configuration
  - Integrated SerDes supports 5.0 GT/s Gen2 and 2.5 GT/s Gen1 operation
  - Delivers up to 32 GBps (256 Gbps) of switching capacity
  - Supports 128 Bytes to 2 KB maximum payload size
  - Low latency cut-through architecture
  - Supports one virtual channel and eight traffic classes
- ◆ **Port Configurability**
  - Eight x4 switch ports
    - Adjacent x4 ports can be merged to achieve x8 port widths
  - Automatic per port link width negotiation
    (x8 --> x4 --> x2 --> x1)
  - Crosslink support
  - Automatic lane reversal
  - Per lane SerDes configuration
    - De-emphasis
    - Receive equalization
    - Drive strength
- ◆ **Innovative Switch Partitioning Feature**
  - Supports up to 8 fully independent switch partitions
  - Logically independent switches in the same device
  - Configurable downstream port device numbering
  - Supports dynamic reconfiguration of switch partitions
    - Dynamic port reconfiguration — downstream, upstream, non-transparent bridge
    - Dynamic migration of ports between partitions
    - Movable upstream port within and between switch partitions
- ◆ **Non-Transparent Bridging (NTB) Support**
  - Supports up to 8 NT endpoints per switch, each endpoint can communicate with other switch partitions or external PCIe domains or CPUs
  - 6 BARs per NT Endpoint
    - Bar address translation

- All BARs support 32/64-bit base and limit address translation
- Two BARs (BAR2 and BAR4) support look-up table based address translation
  - 32 inbound and outbound doorbell registers
  - 4 inbound and outbound message registers
  - Supports up to 64 masters
  - Unlimited number of outstanding transactions
- ◆ **Multicast**
  - Compliant with the PCI-SIG multicast
  - Supports 64 multicast groups
  - Supports multicast across non-transparent port
  - Multicast overlay mechanism support
  - ECRC regeneration support
- ◆ **Integrated Direct Memory Access (DMA) Controllers**
  - Supports up to 2 DMA upstream ports, each with 2 DMA channels
  - Supports 32-bit and 64-bit memory-to-memory transfers
    - Fly-by translation provides reduced latency and increased performance over buffered approach
    - Supports arbitrary source and destination address alignment
    - Supports intra- as well as inter-partition data transfers using the non-transparent endpoint
  - Supports DMA transfers to multicast groups
  - Linked list descriptor-based operation
  - Flexible addressing modes
    - Linear addressing
    - Constant addressing
- ◆ **Quality of Service (QoS)**
  - Port arbitration
    - Round robin
  - Request metering
    - IDT proprietary feature that balances bandwidth among switch ports for maximum system throughput
  - High performance switch core architecture
    - Combined Input Output Queued (CIOQ) switch architecture with large buffers
- ◆ **Clocking**
  - Supports 100 MHz and 125 MHz reference clock frequencies
  - Flexible port clocking modes
    - Common clock
    - Non-common clock
    - Local port clock with SSC (spread spectrum setting) and port reference clock input

IDT and the IDT logo are registered trademarks of Integrated Device Technology, Inc.

◆ **Hot-Plug and Hot Swap**
– Hot-plug controller on all ports
  • Hot-plug supported on all downstream switch ports
– All ports support hot-plug using low-cost external I^{2}C I/O expanders
– Configurable presence-detect supports card and cable applications
– GPE output pin for hot-plug event notification
  • Enables SCI/SMI generation for legacy operating system support
– Hot-swap capable I/O

◆ **Power Management**
– Supports D0, D3hot and D3 power management states
– Active State Power Management (ASPM)
  • Supports L0, L0s, L1, L2/L3 Ready, and L3 link states
  • Configurable L0s and L1 entry timers allow performance/power-savings tuning
– SerDes power savings
  • Supports low swing / half-swing SerDes operation
  • SerDes associated with unused ports are turned off
  • SerDes associated with unused lanes are placed in a low power state

◆ **Reliability, Availability, and Serviceability (RAS)**
– ECRC support
– AER on all ports
– SECDED ECC protection on all internal RAMs
– End-to-end data path parity protection
– Checksum Serial EEPROM content protected
– Ability to generate an interrupt (INTx or MSI) on link up/down transitions

◆ **Initialization / Configuration**
– Supports Root (BIOS, OS, or driver), Serial EEPROM, or SMBus switch initialization
– Common switch configurations are supported with pin strapping (no external components)
– Supports in-system Serial EEPROM initialization/programming

◆ **On-Die Temperature Sensor**
– Range of 0 to 127.5 degrees Celsius
– Three programmable temperature thresholds with over and under temperature threshold alarms
– Automatic recording of maximum high or minimum low temperature

◆ **9 General Purpose I/O**

◆ **Test and Debug**
– Ability to inject AER errors simplifies in system error handling software validation
– On-chip link activity and status outputs available for several ports
– Per port link activity and status outputs available using external I^{2}C I/O expander for all remaining ports
– Supports IEEE 1149.6 AC JTAG and IEEE 1149.1 JTAG

◆ **Standards and Compatibility**
– PCI Express Base Specification 2.1 compliant
– Implements the following optional PCI Express features
  • Advanced Error Reporting (AER) on all ports
  • End-to-End CRC (ECRC)
  • Access Control Services (ACS)
  • Device Serial Number Enhanced Capability
  • Sub-System ID and Sub-System Vendor ID Capability
  • Internal Error Reporting
  • Multicast
  • VGA and ISA enable
  • L0s and L1 ASPM
  • ARI

◆ **Power Supplies**
– Requires three power supply voltages (1.0V, 2.5V, and 3.3V)

◆ **Packaged in a 23mm x 23mm 484-ball Flip Chip BGA with 1mm ball spacing**

Product Description

With Non-Transparent Bridging functionality and innovative Switch Partitioning feature, the PES32NT8BG2 allows true multi-host or multi-processor communications in a single device. Integrated DMA controllers enable high-performance system design by off-loading data transfer operations across memories from the processors. Each lane is capable of 5 GT/s link speed in both directions and is fully compliant with PCI Express Base Specification 2.1.

A non-transparent bridge (NTB) is required when two PCI Express domains need to communicate to each other. The main function of the NTB block is to initialize and translate addresses and device IDs to allow data exchange across PCI Express domains. The major functionalities of the NTB block are summarized in Table 1.
Block Diagram

Figure 1 PES32NT8BG2 Block Diagram

Function	Number	Description
NTB ports	Up to 8	Each device can be configured to have up to 8 NTB functions and can support up to 8 CPUs/roots.
Mapping table entries	Up to 64 for entire device	Each device can have up to 64 masters ID for address and ID translations.
Mapping windows	Six 32-bits or three 64-bits	Each NT port has six BARs, where each BAR opening an NT window to another domain.
Address translation	Direct-address and lookup table translations	Lookup-table translation divides the BAR aperture into up to 24 segments, where each segment has independent translation programming and is associated with an entry in a look-up table.
Doorbell registers	32 bits	Doorbell register is used for event signaling between domains, where an outbound doorbell bit sets a corresponding bit at the inbound doorbell in the other domain.
Message registers	4 inbound and outbound registers of 32-bits	Message registers allow mailbox message passing between domains -- message placed in the inbound register will be seen at the outbound register at the other domain.

Table 1 Non-Transparent Bridge Function Summary

SMBus Interface

The PES32NT8BG2 contains two SMBus interfaces. The slave interface provides full access to the configuration registers in the PES32NT8BG2, allowing every configuration register in the device to be read or written by an external agent. The master interface allows the default configuration register values of the PES32NT8BG2 to be overridden following a reset with values programmed in an external serial EEPROM. The master interface is also used by an external Hot-Plug I/O expander.

Each of the two SMBus interfaces contain an SMBus clock pin and an SMBus data pin. In addition, the slave SMBus has the SSMBADDR2 pin. As shown in Figure 2, the master and slave SMBuses may only be used in a split configuration. In the split configuration, the master and slave SMBuses operate as two independent buses; thus, multi-master arbitration is not required. The SMBus master interface does not support SMBus arbitration. As a result, the switch's SMBus master must be the only master in the SMBus lines that connect to the serial EEPROM and I/O expander slaves.
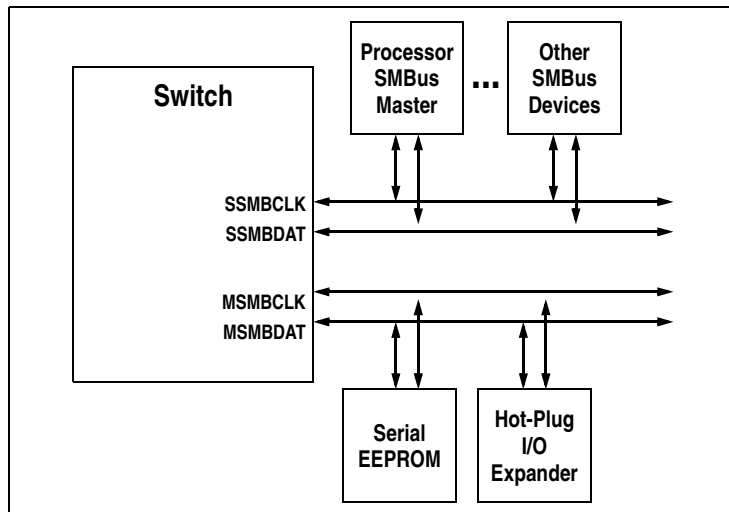

Figure 2 Split SMBus Interface Configuration

Hot-Plug Interface

The PES32NT8BG2 supports PCI Express Hot-Plug on each downstream port. To reduce the number of pins required on the device, the PES32NT8BG2 utilizes an external I/O expander, such as that used on PC motherboards, connected to the SMBus master interface. Following reset and configuration, whenever the state of a Hot-Plug output needs to be modified, the PES32NT8BG2 generates an SMBus transaction to the I/O expander with the new value of all of the outputs. Whenever a Hot-Plug input changes, the I/O expander generates an interrupt which is received on the IOEXPINTN input pin (alternate function of GPIO) of the PES32NT8BG2. In response to an I/O expander interrupt, the PES32NT8BG2 generates an SMBus transaction to read the state of all of the Hot-Plug inputs from the I/O expander.

General Purpose Input/Output

The PES32NT8BG2 provides 9 General Purpose I/O (GPIO) pins that may be individually configured as general purpose inputs, general purpose outputs, or alternate functions. All GPIO pins are shared with other on-chip functions. These alternate functions may be enabled via software, SMBus slave interface, or serial configuration EEPROM.

Pin Description

The following tables list the functions of the pins provided on the PES32NT8BG2. Some of the functions listed may be multiplexed onto the same pin. The active polarity of a signal is defined using a suffix. Signals ending with an "N" are defined as being active, or asserted, when at a logic zero (low) level. All other signals (including clocks, buses, and select lines) will be interpreted as being active, or asserted, when at a logic one (high) level. Differential signals end with a suffix "N" or "P." The differential signal ending in "P" is the positive portion of the differential pair and the differential signal ending in "N" is the negative portion of the differential pair.

Note: Pin [x] of a port refers to a lane. For port 0, PE00RN[0] refers to lane 0, PE00RN[1] refers to lane 1, etc.

Signal	Type	Name/Description
PE00RN[3:0] PE00RP[3:0]	I	**PCI Express Port 0 Serial Data Receive.** Differential PCI Express receive pairs for port 0.
PE00TN[3:0] PE00TP[3:0]	O	**PCI Express Port 0 Serial Data Transmit.** Differential PCI Express transmit pairs for port 0.
PE02RN[3:0] PE02RP[3:0]	I	**PCI Express Port 2 Serial Data Receive.** Differential PCI Express receive pairs for port 2.
PE02TN[3:0] PE02TP[3:0]	O	**PCI Express Port 2 Serial Data Transmit.** Differential PCI Express transmit pairs for port 2.
PE04RN[3:0] PE04RP[3:0]	I	**PCI Express Port 4 Serial Data Receive.** Differential PCI Express receive pairs for port 4.
PE04TN[3:0] PE04TP[3:0]	O	**PCI Express Port 4 Serial Data Transmit.** Differential PCI Express transmit pairs for port 4.
PE06RN[3:0] PE06RP[3:0]	I	**PCI Express Port 6 Serial Data Receive.** Differential PCI Express receive pairs for port 6.
PE06TN[3:0] PE06TP[3:0]	O	**PCI Express Port 6 Serial Data Transmit.** Differential PCI Express transmit pairs for port 6.
PE08RN[3:0] PE08RP[3:0]	I	**PCI Express Port 8 Serial Data Receive.** Differential PCI Express receive pairs for port 8.
PE08TN[3:0] PE08TP[3:0]	O	**PCI Express Port 8 Serial Data Transmit.** Differential PCI Express transmit pairs for port 8.
PE12RN[3:0] PE12RP[3:0]	I	**PCI Express Port 12 Serial Data Receive.** Differential PCI Express receive pairs for port 12.
PE12TN[3:0] PE12TP[3:0]	O	**PCI Express Port 12 Serial Data Transmit.** Differential PCI Express transmit pairs for port 12.
PE16RN[3:0] PE16RP[3:0]	I	**PCI Express Port 16 Serial Data Receive.** Differential PCI Express receive pairs for port 16.
PE16TN[3:0] PE16TP[3:0]	O	**PCI Express Port 16 Serial Data Transmit.** Differential PCI Express transmit pairs for port 16.
PE20RN[3:0] PE20RP[3:0]	I	**PCI Express Port 20 Serial Data Receive.** Differential PCI Express receive pairs for port 20.
PE20TN[3:0] PE20TP[3:0]	O	**PCI Express Port 20 Serial Data Transmit.** Differential PCI Express transmit pairs for port 20.

Table 2 PCI Express Interface Pins

Signal	Type	Name/Description
GCLKN[1:0] GCLKP[1:0]	I	**Global Reference Clock.** Differential reference clock input pairs. This clock is used as the reference clock by on-chip PLLs to generate the clocks required for the system logic. The frequency of the differential reference clock is determined by the GCLKFSEL signal. Note: Both pairs of the Global Reference Clocks must be connected to and derived from the same clock source. Refer to the Overview section of Chapter 2 in the PES32NT8xG2 User Manual for additional details.
P00CLKN P00CLKP	I	**Port Reference Clock**. Differential reference clock pair associated with port 0.
P02CLKN P02CLKP	I	**Port Reference Clock**. Differential reference clock pair associated with port 2.
P04CLKN P04CLKP	I	**Port Reference Clock**. Differential reference clock pair associated with port 4.

Table 3 Reference Clock Pins

Signal	Type	Name/Description
MSMBCLK	I/O	**Master SMBus Clock.** This bidirectional signal is used to synchronize transfers on the master SMBus. It is active and generating the clock only when the EEPROM or I/O Expanders are being accessed.
MSMBDAT	I/O	**Master SMBus Data.** This bidirectional signal is used for data on the master SMBus.
SSMBADDR[2]	I	**Slave SMBus Address.** This pin determines the SMBus address to which the slave SMBus interface responds.
SSMBCLK	I/O	**Slave SMBus Clock.** This bidirectional signal is used to synchronize transfers on the slave SMBus.
SSMBDAT	I/O	**Slave SMBus Data.** This bidirectional signal is used for data on the slave SMBus.

Table 4 SMBus Interface Pins

Signal	Type	Name/Description
GPIO[0]	I/O	General Purpose I/O. This pin can be configured as a general purpose I/O pin. 1st Alternate function pin name: PART0PERSTN 1st Alternate function pin type: Input/Output 1st Alternate function: Assertion of this signal initiated a partition fundamental reset in the corresponding partition. 2nd Alternate function pin name: P16LINKUPN 2nd Alternate function pin type: Output 2nd Alternate function: Port 16 Link Up Status output.
GPIO[1]	I/O	General Purpose I/O. This pin can be configured as a general purpose I/O pin. 1st Alternate function pin name: PART1PERSTN 1st Alternate function pin type: Input/Output 1st Alternate function: Assertion of this signal initiated a partition fundamental reset in the corresponding partition. 2nd Alternate function pin name: P16ACTIVEN 2nd Alternate function pin type: Output 2nd Alternate function: Port 16 Link Active Status Output.
GPIO[2]	I/O	General Purpose I/O. This pin can be configured as a general purpose I/O pin. 1st Alternate function pin name: PART2PERSTN 1st Alternate function pin type: Input/Output 1st Alternate function: Assertion of this signal initiated a partition fundamental reset in the corresponding partition. 2nd Alternate function pin name: P4LINKUPN 2nd Alternate function pin type: Output 2nd Alternate function: Port 4 Link Up Status output.
GPIO[3]	I/O	General Purpose I/O. This pin can be configured as a general purpose I/O pin. 1st Alternate function pin name: PART3PERSTN 1st Alternate function pin type: Input/Output 1st Alternate function: Assertion of this signal initiated a partition fundamental reset in the corresponding partition. 2nd Alternate function pin name: P4ACTIVEN 2nd Alternate function pin type: Output 2nd Alternate function: Port 4 Link Active Status Output.
GPIO[4]	I/O	General Purpose I/O. This pin can be configured as a general purpose I/O pin. 1st Alternate function pin name: FAILOVER0 1st Alternate function pin type: Input 1st Alternate function: When this signal changes state and the corresponding failover capability is enabled, a failover event is signaled. 2nd Alternate function pin name: P0LINKUPN 2nd Alternate function pin type: Output 2nd Alternate function: Port 0 Link Up Status output.
GPIO[5]	I/O	General Purpose I/O. This pin can be configured as a general purpose I/O pin. 1st Alternate function pin name: GPEN 1st Alternate function pin type: Output 1st Alternate function: Hot-plug general purpose even output. 2nd Alternate function pin name: P0ACTIVEN 2nd Alternate function pin type: Output 2nd Alternate function: Port 0 Link Active Status Output.

Table 5 General Purpose I/O Pins (Part 1 of 2)

Signal	Type	Name/Description
GPIO[6]	I/O	General Purpose I/O. This pin can be configured as a general purpose I/O pin. 1st Alternate function pin name: FAILOVER1 1st Alternate function pin type: Input 1st Alternate function: When this signal changes state and the corresponding failover capability is enabled, a failover event is signaled. 2nd Alternate function pin name: FAILOVER3 2nd Alternate function pin type: Input 2nd Alternate function: When this signal changes state and the corresponding failover capability is enabled, a failover event is signaled.
GPIO[7]	I/O	General Purpose I/O. This pin can be configured as a general purpose I/O pin. 1st Alternate function pin name: FAILOVER2 1st Alternate function pin type: Input 1st Alternate function: When this signal changes state and the corresponding failover capability is enabled, a failover event is signaled. 2nd Alternate function pin name: P8LINKUPN 2nd Alternate function pin type: Output 2nd Alternate function: Port 8 Link Up Status output.
GPIO[8]	I/O	General Purpose I/O. This pin can be configured as a general purpose I/O pin. 1st Alternate function pin name: IOEXPINTN 1st Alternate function pin type: Input 1st Alternate function: IO expander interrupt. 2nd Alternate function pin name: P8ACTIVEN 2nd Alternate function pin type: Output 2nd Alternate function: Port 8 Link Active Status Output.

Table 5 General Purpose I/O Pins (Part 2 of 2)

Signal	Type	Name/Description
STK0CFG0	I	**Stack 0 Configuration.** This pin selects the configuration of stack 0.
STK1CFG0	I	**Stack 1 Configuration.** This pin selects the configuration of stack 1.
STK2CFG0	I	**Stack 2 Configuration.** This pin selects the configuration of stack 2.
STK3CFG0	I	**Stack 3 Configuration.** This pin selects the configuration of stack 3.

Table 6 Stack Configuration Pins

Signal	Type	Name/Description
CLKMODE[1:0]	I	**Clock Mode.** These signals determine the port clocking mode used by ports of the device.
GCLKFSEL	I	**Global Clock Frequency Select.** These signals select the frequency of the GCLKP and GCLKN signals. 0x0 100 MHz 0x1 125 MHz

Table 7 System Pins (Part 1 of 2)

Signal	Type	Name/Description
PERSTN	I	**Fundamental Reset.** Assertion of this signal resets all logic inside the device.
RSTHALT	I	**Reset Halt.** When this signal is asserted during a switch fundamental reset sequence, the switch remains in a quasi-reset state with the Master and Slave SMBuses active. This allows software to read and write registers internal to the device before normal device operation begins. The device exits the quasi-reset state when the RSTHALT bit is cleared in the SWCTL register by an SMBus master.
SWMODE[3:0]	I	**Switch Mode.** These configuration pins determine the switch operating mode. These pins should be static and not change following the negation of PERSTN. 0x0 - Single partition 0x1 - Single partition with Serial EEPROM initialization 0x2 - Single partition with Serial EEPROM Jump 0 initialization 0x3 - Single partition with Serial EEPROM Jump 1 initialization 0x4 through 0x7 - Reserved 0x8 - Single partition with reduced latency 0x9 - Single partition with Serial EEPROM initialization and reduced latency 0xA - Multi-partition with Unattached ports 0xB - Multi-partition with Unattached ports and I^2C Reset 0xC - Multi-partition with Unattached ports and Serial EEPROM initialization 0xD - Multi-partition with Unattached ports with I^2C Reset and Serial EEPROM initialization 0xE - Multi-partition with Disabled ports 0xF - Multi-partition with Disabled ports and Serial EEPROM initialization

Table 7 System Pins (Part 2 of 2)

Signal	Type	Name/Description
JTAG_TCK	I	**JTAG Clock**. This is an input test clock used to clock the shifting of data into or out of the boundary scan logic or JTAG Controller. JTAG_TCK is independent of the system clock with a nominal 50% duty cycle.
JTAG_TDI	I	**JTAG Data Input**. This is the serial data input to the boundary scan logic or JTAG Controller.
JTAG_TDO	O	**JTAG Data Output**. This is the serial data shifted out from the boundary scan logic or JTAG Controller. When no data is being shifted out, this signal is tri-stated.
JTAG_TMS	I	**JTAG Mode**. The value on this signal controls the test mode select of the boundary scan logic or JTAG Controller.
JTAG_TRST_N	I	**JTAG Reset**. This active low signal asynchronously resets the boundary scan logic and JTAG TAP Controller. An external pull-up on the board is recommended to meet the JTAG specification in cases where the tester can access this signal. However, for systems running in functional mode, one of the following should occur: 1) actively drive this signal low with control logic 2) statically drive this signal low with an external pull-down on the board

Table 8 Test Pins

Signal	Type	Name/Description
REFRES[7:0]	—	**External Reference Resistor.** Reference for the corresponding SerDes bias currents and PLL calibration circuitry. A 3K Ohm +/- 1% resistor should be connected from this pin to ground and isolated from any source of noise injection. Each bit of this signal corresponds to a SerDes quad, e.g., REFRES[5] is the reference resistor for SerDes quad 5.
REFRESPLL	—	**PLL External Reference Resistor.** Provides a reference for the PLL bias currents and PLL calibration circuitry. A 3K Ohm +/- 1% resistor should be connected from this pin to ground and isolated from any source of noise injection.
$V_{DD}CORE$	—	**Core V_{DD}.** Power supply for core logic (1.0V).
$V_{DD}I/O$	—	**I/O V_{DD}.** LVTTL I/O buffer power supply (3.3V).
$V_{DD}PEA$	—	**PCI Express Analog Power.** Serdes analog power supply (1.0V).
$V_{DD}PEHA$	—	**PCI Express Analog High Power.** Serdes analog power supply (2.5V).
$V_{DD}PETA$	—	**PCI Express Transmitter Analog Voltage.** Serdes transmitter analog power supply (1.0V).
V_{SS}	—	**Ground.**

Table 9 Power, Ground, and SerDes Resistor Pins

Pin Characteristics

Note: Some input pads of the switch do not contain internal pull-ups or pull-downs. Unused SMBus and System inputs should be tied off to appropriate levels. This is especially critical for unused control signal inputs which, if left floating, could adversely affect operation. Also, floating pins can cause a slight increase in power consumption. Unused Serdes (Rx and Tx) pins should be left floating. Finally, No Connection pins should not be connected.

Function	Pin Name	Type	Buffer	I/O Type	Internal Resistor[1]	Notes

	GCLKFSEL	I			pull-down	
	PERSTN	I				Schmitt trigger
	RSTHALT	I			pull-down	Unused pins can be left floating.
	SWMODE[3:0]	I			pull-down	
EJTAG / JTAG	JTAG_TCK	I	LVTTL	STI	pull-up	Unused pins can be left floating.
	JTAG_TDI	I		STI	pull-up	
	JTAG_TDO	O				
	JTAG_TMS	I		STI	pull-up	
	JTAG_TRST_N	I		STI	pull-up	
SerDes Reference Resistors	REFRES[7:0]	—	Analog			Unused pins should be connected to Vss on the board.
	REFRESPLL	—				

Table 10 Pin Characteristics (Part 2 of 2)

[1.] Internal resistor values under typical operating conditions are 92K Ω for pull-up and 91K Ω for pull-down.

[2.] All receiver pins set the DC common mode voltage to ground. All transmitters must be AC coupled to the media.

[3.] Schmitt Trigger Input (STI).

## Logic Diagram — PES32NT8BG2

Figure 3 PES32NT8BG2 Logic Diagram

System Clock Parameters

Values based on systems running at recommended supply voltages and operating temperatures, as shown in Tables 16 and 15.

Parameter	Description	Condition	Min	Typical	Max	Unit
Refclk$_{FREQ}$	Input reference clock frequency range		100		125[1]	MHz
T$_{C-RISE}$	Rising edge rate	Differential	0.6		4	V/ns
T$_{C-FALL}$	Falling edge rate	Differential	0.6		4	V/ns
V$_{IH}$	Differential input high voltage	Differential	+150			mV
V$_{IL}$	Differential input low voltage	Differential			-150	mV
V$_{CROSS}$	Absolute single-ended crossing point voltage	Single-ended	+250		+550	mV
V$_{CROSS-DELTA}$	Variation of V$_{CROSS}$ over all rising clock edges	Single-ended			+140	mV
V$_{RB}$	Ring back voltage margin	Differential	-100		+100	mV
T$_{STABLE}$	Time before V$_{RB}$ is allowed	Differential	500			ps
T$_{PERIOD-AVG}$	Average clock period accuracy		-300		2800	ppm
T$_{PERIOD-ABS}$	Absolute period, including spread-spectrum and jitter		9.847		10.203	ns
T$_{CC-JITTER}$	Cycle to cycle jitter				150	ps
V$_{MAX}$	Absolute maximum input voltage				+1.15	V
V$_{MIN}$	Absolute minimum input voltage		-0.3			V
Duty Cycle	Duty cycle		40		60	%
Rise/Fall Matching	Single ended rising Refclk edge rate versus falling Refclk edge rate			20		%
Z$_{C-DC}$	Clock source output DC impedance		40		60	Ω

Table 11 Input Clock Requirements

[1.] The input clock frequency will be either 100 or 125 MHz depending on signal GCLKFSEL.

Note: Refclk jitter compliant to PCIe Gen2 Common Clock architecture is adequate for the GCLKN/P[x] and PE[x]CLKN/P pins of this IDT PCIe switch. This same jitter specification is applicable when interfacing the switch to another IDT switch in a Separate (Non-Common) Clock architecture.

AC Timing Characteristics

Parameter	Description	Gen 1			Gen 2			Units
		Min[1]	Typ[1]	Max[1]	Min[1]	Typ[1]	Max[1]	
PCIe Transmit								
UI	Unit Interval	399.88	400	400.12	199.94	200	200.06	ps
T$_{TX-EYE}$	Minimum Tx Eye Width	0.75			0.75			UI
T$_{TX-EYE-MEDIAN-to-MAX-JITTER}$	Maximum time between the jitter median and maximum deviation from the median			0.125				UI

Table 12 PCIe AC Timing Characteristics (Part 1 of 2)

Parameter	Description	Gen 1			Gen 2			Units
		Min[1]	Typ[1]	Max[1]	Min[1]	Typ[1]	Max[1]	
$T_{TX-RISE}$, $T_{TX-FALL}$	TX Rise/Fall Time: 20% - 80%	0.125			0.15			UI
$T_{TX-IDLE-MIN}$	Minimum time in idle	20			20			UI
$T_{TX-IDLE-SET-TO-IDLE}$	Maximum time to transition to a valid Idle after sending an Idle ordered set			8			8	ns
$T_{TX-IDLE-TO-DIFF-DATA}$	Maximum time to transition from valid idle to diff data			8			8	ns
$T_{TX-SKEW}$	Transmitter data skew between any 2 lanes			1.3			1.3	ns
$T_{MIN-PULSED}$	Minimum Instantaneous Lone Pulse Width		NA		0.9			UI
$T_{TX-HF-DJ-DD}$	Transmitter Deterministic Jitter > 1.5MHz Bandwidth		NA				0.15	UI
$T_{RF-MISMATCH}$	Rise/Fall Time Differential Mismatch		NA				0.1	UI
PCIe Receive								
UI	Unit Interval	399.88	400	400.12	199.94		200.06	ps
T_{RX-EYE} (with jitter)	Minimum Receiver Eye Width (jitter tolerance)	0.4			0.4			UI
$T_{RX-EYE-MEDIUM TO MAX JITTER}$	Max time between jitter median & max deviation			0.3				UI
$T_{RX-SKEW}$	Lane to lane input skew			20			8	ns
$T_{RX-HF-RMS}$	1.5 — 100 MHz RMS jitter (common clock)		NA				3.4	ps
$T_{RX-HF-DJ-DD}$	Maximum tolerable DJ by the receiver (common clock)		NA				88	ps
$T_{RX-LF-RMS}$	10 KHz to 1.5 MHz RMS jitter (common clock)		NA				4.2	ps
$T_{RX-MIN-PULSE}$	Minimum receiver instantaneous eye width		NA		0.6			UI

Table 12 PCIe AC Timing Characteristics (Part 2 of 2)

[1.] Minimum, Typical, and Maximum values meet the requirements under PCI Express Base Specification 2.1.

Signal	Symbol	Reference Edge	Min	Max	Unit	Timing Diagram Reference
GPIO						
GPIO[8:0][1]	Tpw_13b[2]	None	50	—	ns	See Figure 4.

Table 13 GPIO AC Timing Characteristics

[1.] GPIO signals must meet the setup and hold times if they are synchronous or the minimum pulse width if they are asynchronous.

[2.] The values for this symbol were determined by calculation, not by testing.
Figure 4 GPIO AC Timing Waveform

Signal	Symbol	Reference Edge	Min	Max	Unit	Timing Diagram Reference
JTAG						
JTAG_TCK	Tper_16a	none	50.0	—	ns	See Figure 5.
	Thigh_16a, Tlow_16a		10.0	25.0	ns	
JTAG_TMS[1], JTAG_TDI	Tsu_16b	JTAG_TCK rising	2.4	—	ns	
	Thld_16b		1.0	—	ns	
JTAG_TDO	Tdo_16c	JTAG_TCK falling	—	20	ns	
	Tdz_16c[2]		—	20	ns	
JTAG_TRST_N	Tpw_16d[2]	none	25.0	—	ns	

Table 14 JTAG AC Timing Characteristics

[1.] The JTAG specification, IEEE 1149.1, recommends that JTAG_TMS should be held at 1 while the signal applied at JTAG_TRST_N changes from 0 to 1. Otherwise, a race may occur if JTAG_TRST_N is deasserted (going from low to high) on a rising edge of JTAG_TCK when JTAG_TMS is low, because the TAP controller might go to either the Run-Test/Idle state or stay in the Test-Logic-Reset state.

[2.] The values for this symbol were determined by calculation, not by testing.

Figure 5 JTAG AC Timing Waveform

Recommended Operating Temperature

Grade	Temperature
Commercial	0°C to +70°C Ambient
Industrial	-40°C to +85°C Ambient

Table 15 PES32NT8BG2 Operating Temperatures

Recommended Operating Supply Voltages — Commercial Temperature

Symbol	Parameter	Minimum	Typical	Maximum	Unit
V_{DD}CORE	Internal logic supply	0.9	1.0	1.1	V
V_{DD}I/O	I/O supply except for SerDes	3.125	3.3	3.465	V
V_{DD}PEA[1]	PCI Express Analog Power	0.95	1.0	1.1	V
V_{DD}PEHA[2]	PCI Express Analog High Power	2.25	2.5	2.75	V
V_{DD}PETA[1]	PCI Express Transmitter Analog Voltage	0.95	1.0	1.1	V
V_{SS}	Common ground	0	0	0	V

Table 16 PES32NT8BG2 Operating Voltages — Commercial Temperature

[1.] V_{DD}PEA and V_{DD}PETA should have no more than 25mV$_{peak-peak}$ AC power supply noise superimposed on the 1.0V nominal DC value.

[2.] V_{DD}PEHA should have no more than 50mV$_{peak-peak}$ AC power supply noise superimposed on the 2.5V nominal DC value.

Recommended Operating Supply Voltages — Industrial Temperature

Symbol	Parameter	Minimum	Typical	Maximum	Unit
V_{DD}CORE	Internal logic supply	0.9	1.0	1.1	V
V_{DD}I/O	I/O supply except for SerDes	3.125	3.3	3.465	V
V_{DD}PEA[1]	PCI Express Analog Power	0.95	1.0	1.05	V
V_{DD}PEHA[2]	PCI Express Analog High Power	2.25	2.5	2.75	V
V_{DD}PETA[1]	PCI Express Transmitter Analog Voltage	0.95	1.0	1.1	V
V_{SS}	Common ground	0	0	0	V

Table 17 PES32NT8BG2 Operating Voltages — Industrial Temperature

[1.] V_{DD}PEA and V_{DD}PETA should have no more than 25mV$_{peak-peak}$ AC power supply noise superimposed on the 1.0V nominal DC value.

[2.] V_{DD}PEHA should have no more than 50mV$_{peak-peak}$ AC power supply noise superimposed on the 2.5V nominal DC value.

Power-Up/Power-Down Sequence

During power supply ramp-up, V_{DD}CORE must remain at least 1.0V below V_{DD}I/O at all times. There are no other power-up sequence requirements for the various operating supply voltages.

The power-down sequence can occur in any order.

Power Consumption

Typical power is measured under the following conditions: 25°C Ambient, 35% total link usage on all ports, typical voltages defined in Table 16 (and also listed below).

Maximum power is measured under the following conditions: 70°C Ambient, 85% total link usage on all ports, maximum voltages defined in Table 16 (and also listed below).

Number of Active Lanes per Port		Core Supply		PCIe Analog Supply		PCIe Analog High Supply		PCIe Transmitter Supply		I/O Supply		Total	
		Typ 1.0V	Max 1.1V	Typ 1.0V	Max 1.1V	Typ 2.5V	Max 2.75V	Typ 1.0V	Max 1.1V	Typ 3.3V	Max 3.465	Typ Power	Max Power
x8/x8/x8/x4/x4 (Full Swing)	mA	2486	3400	1623	1806	230	234	679	729	3	5		
	Watts	2.49	3.74	1.62	1.99	0.58	0.64	0.68	0.80	0.01	0.02	5.38	7.19
x8/x8/x8/x4/x4 (Half Swing)	mA	2486	3400	1396	1553	230	234	353	379	3	5		
	Watts	2.49	3.74	1.40	1.71	0.58	0.64	0.35	0.42	0.01	.02	4.83	6.53

Table 18 PES32NT8BG2 Power Consumption

Note 1: The above power consumption assumes that all ports are functioning at Gen2 (5.0 GT/S) speeds. Power consumption can be reduced by turning off unused ports through software or through boot EEPROM. Power savings will occur in $V_{DD}PEA$, $V_{DD}PEHA$, and $V_{DD}PETA$. Power savings can be estimated as directly proportional to the number of unused ports, since the power consumption of a turned-off port is close to zero. For example, if 3 ports out of 16 are turned off, then the power savings for each of the above three power rails can be calculated quite simply as 3/16 multiplied by the power consumption indicated in the above table.

Note 2: Using a port in Gen1 mode (2.5GT/S) results in approximately 18% power savings for each power rail: $V_{DD}PEA$, $V_{DD}PEHA$, and $V_{DD}PETA$.

Thermal Considerations

This section describes thermal considerations for the PES32NT8BG2 (23mm^2 FCBGA484 package). The data in Table 19 below contains information that is relevant to the thermal performance of the PES32NT8BG2 switch.

Symbol	Parameter	Value	Units	Conditions
$T_{J(max)}$	Junction Temperature	125	^oC	Maximum
$T_{A(max)}$	Ambient Temperature	70	^oC	Maximum for commercial-rated products
		85	^oC	Maximum for industrial-rated products
$\theta_{JA(effective)}$	Effective Thermal Resistance, Junction-to-Ambient	15.2	$^oC/W$	Zero air flow
		8.5	$^oC/W$	1 m/S air flow
		7.1	$^oC/W$	2 m/S air flow
θ_{JB}	Thermal Resistance, Junction-to-Board	3.1	$^oC/W$	
θ_{JC}	Thermal Resistance, Junction-to-Case	0.15	$^oC/W$	
P	Power Dissipation of the Device	7.19	Watts	Maximum

Table 19 Thermal Specifications for PES32NT8BG2, 23x23 mm FCBGA484 Package

Note: It is important for the reliability of this device in any user environment that the junction temperature not exceed the $T_{J(max)}$ value specified in Table 19. Consequently, the effective junction to ambient thermal resistance (θ_{JA}) for the worst case scenario must be maintained below the value determined by the formula:

$$\theta_{JA} = (T_{J(max)} - T_{A(max)})/P$$

Given that the values of $T_{J(max)}$, $T_{A(max)}$, and P are known, the value of desired θ_{JA} becomes a known entity to the system designer. How to achieve the desired θ_{JA} is left up to the board or system designer, but in general, it can be achieved by adding the effects of θ_{JC} (value provided in Table 19), thermal resistance of the chosen adhesive (θ_{CS}), that of the heat sink (θ_{SA}), amount of airflow, and properties of the circuit board (number of layers and size of the board). It is strongly recommended that users perform their own thermal analysis for their own board and system design scenarios.

DC Electrical Characteristics

Values based on systems running at recommended supply voltages, as shown in Table 16.

Note: See Table 10, Pin Characteristics, for a complete I/O listing.

I/O Type	Parameter	Description	Gen1			Gen2			Unit	Condi-tions
			Min[1]	Typ[1]	Max[1]	Min[1]	Typ[1]	Max[1]		
Serial Link	PCIe Transmit									
	$V_{TX-DIFFp-p}$	Differential peak-to-peak output voltage	800		1200	800		1200	mV	
	$V_{TX-DIFFp-p-LOW}$	Low-Drive Differential Peak to Peak Output Voltage	400		1200	400		1200	mV	
	$V_{TX-DE-RATIO-3.5dB}$	De-emphasized differential output voltage	-3		-4	-3.0	-3.5	-4.0	dB

Absolute Maximum Voltage Rating

Core Supply	PCIe Analog Supply	PCIe Analog High Supply	PCIe Transmitter Supply	I/O Supply
1.5V	1.5V	4.6V	1.5V	4.6V

Table 21 PES32NT8BG2 Absolute Maximum Voltage Rating

   Warning: For proper and reliable operation in adherence with this data sheet, the device should not exceed the recommended operating voltages in Table 16. The absolute maximum operating voltages in Table 21 are offered to provide guidelines for voltage excursions outside the recommended voltage ranges. Device functionality is not guaranteed at these conditions and sustained operation at these values or any exposure to voltages outside the maximum range may adversely affect device functionality and reliability.
