## NOTES

1. DQ wiring may differ from that shown however ,DQ,DM, DQS, and DQS relationships are maintained as shown

## Absolute Maximum Ratings

Parameter	Symbol	Description	Units
Voltage on VDD pin relative to Vss	$V_{DD}$	- 0.4 V ~ 1.975 V	V
Voltage on VDDQ pin relative to Vss	$V_{DDQ}$	- 0.4 V ~ 1.975 V	V
Voltage on any pin relative to Vss	$V_{IN}, V_{OUT}$	- 0.4 V ~ 1.975 V	V
Storage Temperature	TSTG	-55 to +100	°C

Notes:

1. Stresses greater than those listed under “Absolute Maximum Ratings” may cause permanent damage to the device. This is a stress rating only and functional operation of the device at these or any other conditions above those indicated in the operational sections of this specification is not implied. Exposure to absolute maximum rating conditions for extended periods may affect reliability.
2. Storage Temperature is the case surface temperature on the center/top side of the DRAM. For the measurement conditions, please refer to JESD51-2 standard.
3. VDD and VDDQ must be within 300mV of each other at all times; and VREF must not be greater than 0.6 x VDDQ, when VDD and VDDQ are less than 500mV; VREF may be equal to or less than 300mV.

# DRAM Component Operating Temperature Range

Symbol	Parameter	Rating	Units	Notes
T <sub>OPER</sub>	Normal Operating Temperature Range	0 to 85	°C	1,2
	Extended Temperature Range	85 to 95	°C	1,3

Notes:

1. Operating Temperature T<sub>OPER</sub> is the case surface temperature on the center / top side of the DRAM. For measurement conditions please refer to the JEDEC document JESD51-2.
2. The Normal Temperature Range specifies the temperatures where all DRAM specifications will be supported during operation, the DRAM case temperature must be maintained between 0°C - 85°C under all operating Conditions.
3. Some applications require operation of the DRAM in the Extended Temperature Range between 85°C and 95°C case temperature. Full specifications are guaranteed in this range, but the following additional conditions apply:
  - a. Refresh commands must be doubled in frequency, therefore reducing the Refresh interval tREFI to 3.9 μs.
  - b. If Self-Refresh operation is required in the Extended Temperature Range, then it is mandatory to either use the Manual Self-Refresh mode with Extended Temperature Range capability (MR2 A6 = 0b and MR2 A7 = 1b), in this case IDD6 current can be increased around 10~20% than normal Temperature range.

# Operating Conditions

## Recommended DC Operating Conditions - DDR3L (1.35V) operation

Symbol	Parameter	Rating			Units
		Min.	Typ.	Max.	
VDD	Supply Voltage	1.283	1.35	1.45	V
VDDQ	Supply Voltage for Output	1.283	1.35	1.45	V

Notes:

1. If minimum limit is exceeded, input levels shall be governed by DDR3L specifications.
2. Under 1.5V operation, this DDR3L device operates to the DDR3 specifications under the same speed timings as defined for this device.
3. Once initialized for DDR3 operation, DDR3L operation may only be used if the device is in reset while VDD and VDDQ are changed for DDR3L operation.
