

Chipsmall Limited consists of a professional team with an average of over 10 year of expertise in the distribution of electronic components. Based in Hongkong, we have already established firm and mutual-benefit business relationships with customers from,Europe,America and south Asia,supplying obsolete and hard-to-find components to meet their specific needs.

With the principle of “Quality Parts,Customers Priority,Honest Operation,and Considerate Service”,our business mainly focus on the distribution of electronic components. Line cards we deal with include Microchip,ALPS,ROHM,Xilinx,Pulse,ON,Everlight and Freescale. Main products comprise IC,Modules,Potentiometer,IC Socket,Relay,Connector.Our parts cover such applications as commercial,industrial, and automotives areas.

We are looking forward to setting up business relationship with you and hope to provide you with the best service and solution. Let us make a better world for our industry!

Computers / Hardware

Summary:

Make microcontrollers, PCs, servers, and smartphones talk to each other. Building electronic projects that interact with the physical world is good fun. But when the devices you've built start to talk to each other, things really get interesting. With 33 easy-to-build projects, Making Things Talk shows you how to get your gadgets to communicate with you and your environment. It's perfect for people with little technical training but a lot of interest. In this expanded edition, you'll learn how to form networks of smart devices that share data and respond to commands.

- Call your home thermostat with a smartphone and change the temperature.
- Create your own game controllers that communicate over a network.
- Use ZigBee, Bluetooth, Infrared, and plain old radio to transmit sensor data wirelessly.
- Work with Arduino 1.0, Processing, and PHP—three easy-to-use, open source environments.
- Write programs to send data across the Internet, based on physical activity in your home, office, or backyard.
