## : ©hipsmall

Chipsmall Limited consists of a professional team with an average of over 10 year of expertise in the distribution of electronic components. Based in Hongkong, we have already established firm and mutual-benefit business relationships with customers from,Europe,America and south Asia,supplying obsolete and hard-to-find components to meet their specific needs.

With the principle of "Quality Parts,Customers Priority,Honest Operation, and Considerate Service",our business mainly focus on the distribution of electronic components. Line cards we deal with include Microchip,ALPS,ROHM,Xilinx,Pulse,ON,Everlight and Freescale. Main products comprise IC,Modules,Potentiometer,IC Socket,Relay,Connector.Our parts cover such applications as commercial,industrial, and automotives areas.

We are looking forward to setting up business relationship with you and hope to provide you with the best service and solution. Let us make a better world for our industry!

## Dimensions

- Constant-Current DC Array, 6 LED Series x 4 Parallel Strings - Designed for easy use in standard luminaires
-Tight LED pitch eliminates pixelization, no complex lens or optics required
- Color: $1 / 4$ ANSI Binning, 3 Step MacAdam Ellipse
- Applications: Commercial or Residential Downlights
- Customizable: Engines can be modified to your application. Contact us.
- Engineered by Norlux
- 5 yr . Warranty

## Connectivity Options

| Suffix | Connection |
| :--- | :--- |
| (blank) | 12 IN, \#22 AWG Stranded Leads |
| -01 | No Leads |
| -02 | Push-in Connectors |

For Poke-In Connectors, use \#24-18 AWG stranded or solid wire

## Series/Parallel Configurations

Parallel: The positive and negative of one board is connected to the respective positive and negative of the next. Current adds, so the supply must be $2 x$ the current for 2 boards.

Series: The negative of one board is connected to the positive of the next. Voltage adds, so the supply must be $2 x$ the voltage for 2 boards.

## Maximum Run Lengths

The max number of boards wired in a chain (series) is limited by the max current rating of the first board wired to the driver. The sum of the board currents, in the chain, funnels through the first board. Multiple chains can connect directly to the power supply in parallel. See table
for max chain length.

| Product | Series/Parallel | Max Allowable Boards <br> High Current (Nom) |  |
| :---: | :---: | :---: | :---: |
| Low Current |  |  |  |

## Mounting Notes

The LED assembly is supplied with mounting holes, per the dimensional drawing. It is important to mount the board in such a way as to maintain the Tc point below the max. The steady state thermals in application will dictate if the board needs to be mounted directly to metallic housing and/or include a thermal pad. For example fully enclosed recessed fixture will require better thermal mounting than an open air pendant.

## Compatible TRP Drivers:

The drivers listed here are all compatible with this module. Choose the best driver for your application.

- LED12W-36-C0350-D

## Step Dimming:

This Light Engine can be step-dimmed, with a recommended TRP dimmable driver and SD series step-dimming module. See the SD2 or SD3 data sheet for wiring information.

## Thermal Application Notes

This board requires additional heat sinking to run above $45^{\circ} \mathrm{C}$ ambient at nominal specifications. Heat sink is also required when operated above specified drive currents.

## Maximum Current

## Max Current: 720mA

Voltage at max current: 20V, Power at max current: 14.4W
The total maximum current reflects the LED maximum forward current only, without considering thermal needs. Driving the LEDs this hard will likely violate their thermal limits, depending on the application. Tc point must remain at or below the max temperature, or the warranty will be voided. Temperature is directly correlated to LED current.

## Static Sensitive Device

Handle only at static-safe work stations.

## Packaging

50 per box standard.
