#### **Drivers**

LUXdrive offers a line of drivers designed for use with high-power LED modules such as the Endor Star<sup>™</sup>. The choice of driver will depend upon number of modules to be driven, the input voltage source, and the desired forward drive current. See the full line of LUXdrive products at <u>www.LUXdrive.com</u>

#### **Heat Sinking and Mounting**

The Endor Star<sup>™</sup> has six mounting points for #4 screws. It should be attached to additional heat sinking for proper thermal management. At minimum, a heat sink of a metal plate (copper or aluminum), attached using a thermal interface material, (such as LUXdrive HexaTherm<sup>™</sup> A001), should be used to increase the area exposed to free air. The Endor Star<sup>™</sup> Metal Core Printed Circuit Board has a backing plate that is electrically isolated from the emitter. It is not necessary to use an electrically insulated thermal interface material.

#### **Optics**

The Endor Star<sup>™</sup> can be fitted with many different optics from major optics manufacturers. On the 7040 there are four indentations on the board, designed as registration holes for the Carclo1041x series of optics. These small 10mm optics are avilable in multiple viewing angles and work extremely well in applications where a low profile is desired.

On the 7007 there are three holes in the board, designed to hold the Carclo CO-105xx series of optics. These 20mm optics are available in multiple viewing angles 16°, 22°, 26°, 37°, and 43 x 16°.
