

Chipsmall Limited consists of a professional team with an average of over 10 year of expertise in the distribution of electronic components. Based in Hongkong, we have already established firm and mutual-benefit business relationships with customers from, Europe, America and south Asia, supplying obsolete and hard-to-find components to meet their specific needs.

With the principle of "Quality Parts, Customers Priority, Honest Operation, and Considerate Service", our business mainly focus on the distribution of electronic components. Line cards we deal with include Microchip, ALPS, ROHM, Xilinx, Pulse, ON, Everlight and Freescale. Main products comprise IC, Modules, Potentiometer, IC Socket, Relay, Connector. Our parts cover such applications as commercial, industrial, and automotives areas.

We are looking forward to setting up business relationship with you and hope to provide you with the best service and solution. Let us make a better world for our industry!

FEATURES AND BENEFITS

- · AEC-Q100 automotive qualified
- Micropower operation
- · Operation with north or south pole
- 2.5 to 3.5 V battery operation
- Chopper stabilized
 - □ Superior temperature stability
 - □ Extremely low switchpoint drift
 - □ Insensitive to physical stress
- High ESD protection
- Solid-state reliability
- · Small size
- Easily manufacturable with magnet pole independence

PACKAGES:

DESCRIPTION

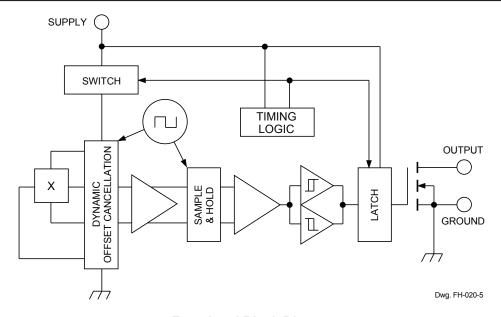

The A3211 and A3212 integrated circuits are ultrasensitive, pole independent Hall-effect switches with latched digital output. These devices are especially suited for operation in battery-operated, hand-held equipment such as cellular and cordless telephones, pagers, and palmtop computers. A 2.5 to 3.5 V operation and a unique clocking scheme reduce the average operating power requirements to less than 15 μW with a 2.75 V supply.

Unlike other Hall-effect switches, either a north or south pole of sufficient strength will turn the output on in the A3212, and in the absence of a magnetic field, the output is off. The A3211 provides an inverted output. The polarity independence and minimal power requirements allow these devices to easily replace reed switches for superior reliability and ease of manufacturing, while eliminating the requirement for signal conditioning.

Improved stability is made possible through chopper stabilization (dynamic offset cancellation), which reduces the residual offset voltage normally caused by device overmolding, temperature dependencies, and thermal stress.

This device includes on a single silicon chip a Hall-voltage generator, small-signal amplifier, chopper stabilization, a latch, and a MOSFET output. Advanced CMOS processing is used to take advantage of low-voltage and low-power

DESCRIPTION (continued)

requirements, component matching, very low input-offset errors, and small component geometries.

Four package styles provide magnetically optimized solutions for most applications. Miniature low-profile surface-mount package types EH and EL (0.75 and 0.50 mm nominal height) are leadless, LHis a 3-pin low-profile SMD, and UA is a three-pin SIP for throughhole mounting. Packages are lead (Pb) free (suffix, -T) with 100% matte-tin-plated leadframes.

⁵ Variant is in production but has been determined to be LAST TIME BUY. This classification indicates that the product is obsolete and notice has been given. Sale of this device is currently restricted to existing customer applications. The device should not be purchased for new design applications because of obsolescence in the near future. Samples are no longer available. Date of status change: September 1, 2016.

ABSOLUTE MAXIMUM RATINGS

Characteristic	Symbol	Notes	Rating	Units
Supply Voltage	V _{DD}		5	V
Magnetic Flux Density	В		Unlimited	G
Output Off Voltage	V _{OUT}		5	V
Output Current	I _{OUT}		1	mA
Operating Ambient Temperature		Range E	-40 to 85	°C
Operating Ambient Temperature	T _A	Range L	-40 to 150	°C
Maximum Junction Temperature	T _J (max)		165	°C
Storage Temperature	T _{stg}		-65 to 170	°C

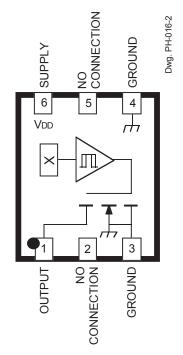

² Allegro products sold in DFN package types are not intended for automotive applications.

³ Variant is no longer in production. The device should not be purchased for new design applications. Samples are no longer available. Date of status change: June 1, 2015 (A3212EEHLT-T), December 1, 2015 (A3211EEHLT-T).

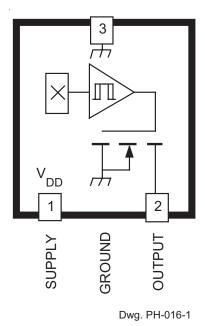

⁴ For automotive sales, please contact the field applications engineer.

PINOUT DRAWINGS

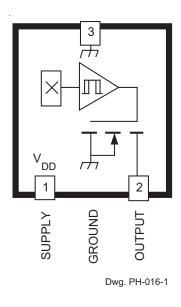

Package Suffix 'EH' Pinning (Leadless Chip Carrier)

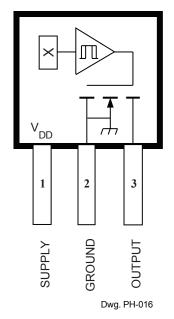

Package Suffix 'LH' Pinning (SOT23W)

Package Suffix 'EL' Pinning (Leadless Chip Carrier)

Package Suffix 'UA' Pinning (SIP)

Pinning is shown viewed from branded side.

TYPICAL OPERATING CHARACTERISTICS

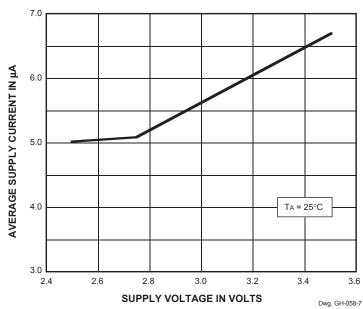

Switch Points

Supply Current

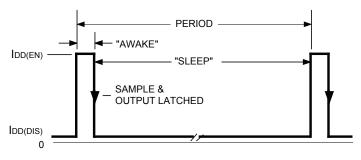

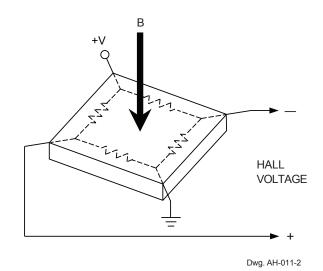

FUNCTIONAL DESCRIPTION

Low Average Power

Internal timing circuitry activates the IC for $45~\mu s$ and deactivates it for the remainder of the period (45~ms). A short "awake" time allows for stabilization prior to the sampling and data latching on the falling edge of the timing pulse. The output during the "sleep" time is latched in the last sampled state. The supply current is not affected by the output state.

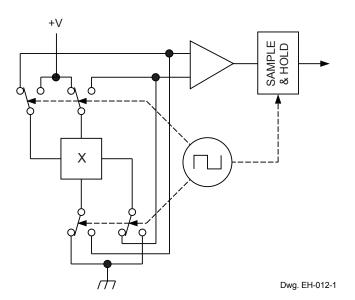

Dwg. WH-017-2

Chopper-Stabilized Technique

The Hall element can be considered as a resistor array similar to a Wheatstone bridge. A large portion of the offset is a result of the mismatching of these resistors. These devices use a proprietary dynamic offset cancellation technique, with an internal high-frequency clock to reduce the residual offset voltage of the Hall element that is normally caused by device overmolding, temperature dependencies, and thermal stress. The chopper-stabilizing technique cancels the mismatching of the resistor circuit by changing the direction of the current flowing through the Hall plate using CMOS switches and Hall voltage measurement taps, while maintaing the Hall-voltage signal that is induced by the external magnetic flux. The signal is then captured by a sample-and-hold circuit and further processed using low-offset bipolar circuitry. This technique produces devices that have an extremely stable quiescent Hall output voltage, are immune to thermal stress, and have precise recoverability after temperature cycling. A relatively high sampling frequency is used for faster signal processing capability can be processed.

More detailed descriptions of the circuit operation can be found in: Technical Paper STP 97-10, *Monolithic Magnetic Hall Sensing Using Dynamic Quadrature Offset Cancellation* and Technical Paper STP 99-1, *Chopper-Stabilized Amplifiers With A Track-and-Hold Signal Demodulator*.

Operation

The output of the A3212 switches low (turns on) when a magnetic field perpendicular to the Hall element exceeds the operate point B_{OPS} (or is less than B_{OPN}). After turn-on, the output is capable of sinking up to 1 mA and the output voltage is $V_{OUT(ON)}$. When the magnetic field is reduced below the release point B_{RPS} (or increased above B_{RPN}), the device output switches high (turns off). The difference in the magnetic operate and release points is the hysteresis (B_{hys}) of the device. This built-in hysteresis allows clean switching of the output even in the presence of external mechanical vibration and electrical noise. The A3211 functions in the same manner, except the output voltage is reversed from the A3212, as shown in the figures to the right.

As used here, negative flux densities are defined as less than zero (algebraic convention), i.e., -50 G is less than +10 G.

Applications

Allegro's pole-independent processing technique allows for operation with either a north pole or south pole magnet orientation, enhancing the manufacturability of the device. The state-of-the-art technology provides the same output polarity for either pole face.

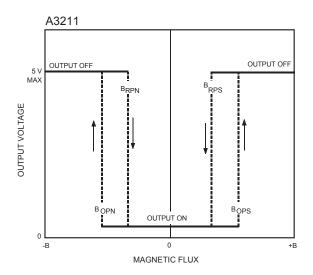

It is strongly recommended that an external bypass capacitor be connected (in close proximity to the Hall element) between the supply and ground of the device to reduce both external noise and noise generated by the chopper-stabilization technique. This is especially true due to the relatively high impedance of battery supplies.

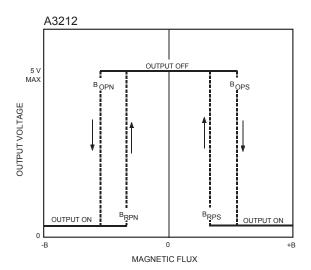

The simplest form of magnet that will operate these devices is a bar magnet with either pole near the branded surface of the device. Many other methods of operation are possible. Extensive applications information for Hall-effect devices is available in:

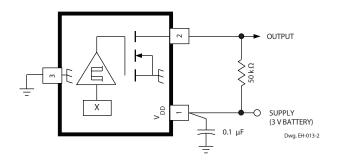

- Hall-Effect IC Applications Guide, Application Note 27701;
- Hall-Effect Devices: Guidelines for Designing Subassemblies Using Hall-Effect Devices, Application Note 27703.1;
- Soldering Methods for Allegro's Products SMD and Through-Hole, Application Note 26009.

PACKAGE OUTLINE DRAWINGS

For Reference Only – Not for Tooling Use (Reference DWG-2861 and JEDEC MO-229WCED, Type 1)

(Reference DWG-2861 and JEDEC MO-229WCED, Type 1)

Dimensions in millimeters – NOT TO SCALE

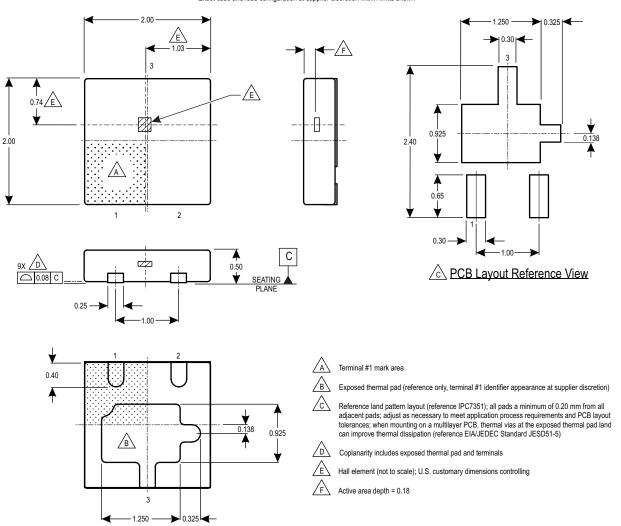

Exact case and lead configuration at supplier discretion within limits shown

Package EH, 6-Pin DFN

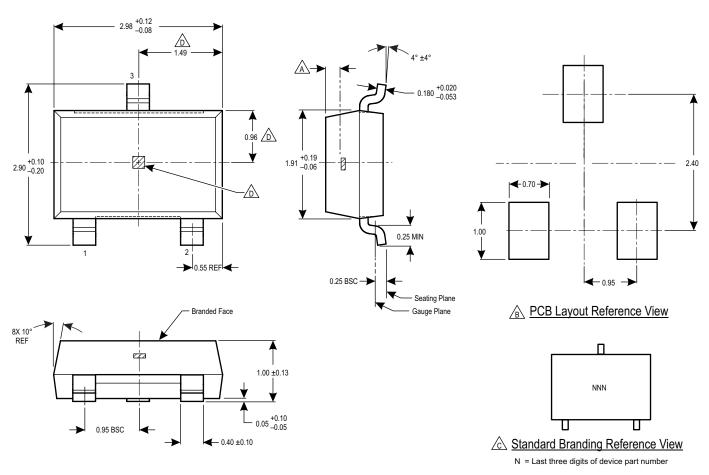

9

For Reference Only — Not for Tooling Use
(Reference DWG-2861 and JEDEC MO-229UCCD)
All dimension nominal – Dimensions in millimeters – NOT TO SCALE
Exact case and lead configuration at supplier discretion within limits shown

Package EL, 3-Pin DFN

For Reference Only — Not for Tooling Use
(Reference DWG-2840)
Dimensions in millimeters — NOT TO SCALE Dimensions exclusive of mold flash, gate burrs, and dambar protrusions Exact case and lead configuration at supplier discretion within limits shown

Active Area Depth, 0.28 mm

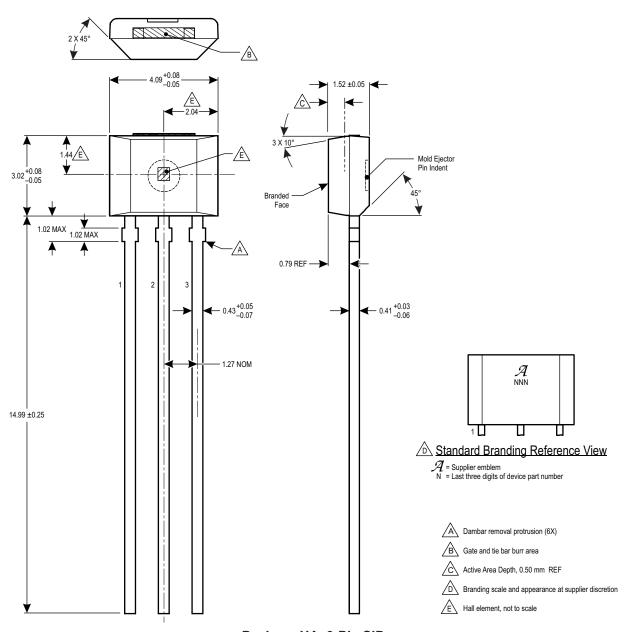

Reference land pattern layout; all pads a minimum of 0.20 mm from all adjacent pads; adjust as necessary to meet application process requirements and PCB layout tolerances

Branding scale and appearance at supplier discretion

hall elements, not to scale

Package LH, 3-Pin SOT-23W

For Reference Only — Not for Tooling Use
(Reference DWG-9065)
Dimensions in millimeters — NOT TO SCALE
Dimensions exclusive of mold flash, gate burrs, and dambar protrusions
Exact case and lead configuration at supplier discretion within limits shown

Package UA, 3-Pin SIP

Revision History

Number	Date	Description	
18	December 11, 2013	Update application note references	
19	August 1, 2014	Revised footnote on Selection Guide	
20	January 1, 2015	Added LX option to Selection Guide	
21	September 22, 2015	Corrected LH package Active Area Depth value; added AEC-Q100 qualification under Features and Benefits	
22	December 1, 2015	Updated product status in Selection Guide and footnotes	
23	December 5, 2016	Updated product status in Selection Guide and footnotes	
24	February 27, 2017	Minor editorial update
