

Chipsmall Limited consists of a professional team with an average of over 10 year of expertise in the distribution of electronic components. Based in Hongkong, we have already established firm and mutual-benefit business relationships with customers from,Europe,America and south Asia,supplying obsolete and hard-to-find components to meet their specific needs.

With the principle of “Quality Parts,Customers Priority,Honest Operation,and Considerate Service”,our business mainly focus on the distribution of electronic components. Line cards we deal with include Microchip,ALPS,ROHM,Xilinx,Pulse,ON,Everlight and Freescale. Main products comprise IC,Modules,Potentiometer,IC Socket,Relay,Connector.Our parts cover such applications as commercial,industrial, and automotives areas.

We are looking forward to setting up business relationship with you and hope to provide you with the best service and solution. Let us make a better world for our industry!

**Information Sheet**

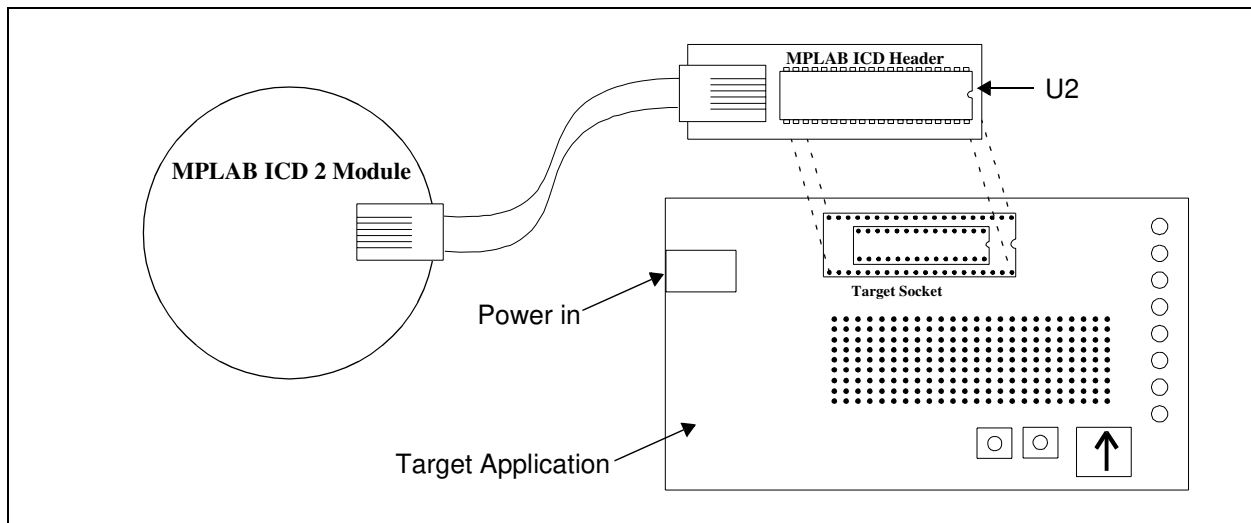

---

---

**Introduction**

The MPLAB<sup>®</sup> ICD Header (Part Number AC162051) provides a means of connecting the MPLAB ICD 2 Module to a target board that does not incorporate a 6-wire modular connection into its design. The board is designed for 40-pin devices supported by MPLAB ICD 2. Please see the README.ID2 in the MPLAB IDE software for specific details on devices supported.

The MPLAB ICD 2 Module connects to the MPLAB ICD Header via a 9-inch modular cable. For in-circuit debugging, insert a 40-pin PICmicro<sup>®</sup> into the MPLAB ICD Header, then insert the header board into a 28-pin or 40-pin DIP socket on the target application. The 28-pin connector on the underside allows debugging of a 28-pin device using a 40-pin device as the master (U2). Pin connections translate a 40-pin device to the 28-pin device.

**Figure 1: MPLAB ICD 2 Module Connection with Header**

# MPLAB<sup>®</sup> ICD Header Information Sheet

---

## Installation

Install the MPLAB ICD Header by following these steps:

1. Plug the 40-pin device into the 40-pin DIP socket (U2 location) in the MPLAB ICD Header board.

**Note 1:** All signals EXCEPT RB6 and RB7 are brought down to the target board. RB6 and RB7 are reserved for use on MPLAB ICD 2 and only connect to the MPLAB ICD 2 connector.

**2:** J1 is not populated but is shorted on the bottom side of the board, this allows the MPLAB ICD 2 to sense the target voltage and provide the proper signals to the target board.

2. Connect the 9-inch modular cable between the MPLAB ICD 2 Module and the MPLAB ICD Header.
3. If you are debugging a 40-pin part using a target board, insert the two 20-pin male to male headers (stand-offs) onto the target board sockets. Then, plug the MPLAB ICD Header board into the stand-offs.

If you are debugging a 28-pin part using a target board, insert the two 14-pin male to male headers (stand-offs) onto the target board sockets. Then, plug the MPLAB ICD Header board into the stand-offs.

*Microchip received QS-9000 quality system certification for its worldwide headquarters, design and wafer fabrication facilities in Chandler and Tempe, Arizona in July 1999 and Mountain View, California in March 2002. The Company's quality system processes and procedures are QS-9000 compliant for its PICmicro® 8-bit MCUs, KEELOQ® code hopping devices, Serial EEPROMs, microperipherals, non-volatile memory and analog products. In addition, Microchip's quality system for the design and manufacture of development systems is ISO 9001 certified.*
