

Chipsmall Limited consists of a professional team with an average of over 10 year of expertise in the distribution of electronic components. Based in Hongkong, we have already established firm and mutual-benefit business relationships with customers from,Europe,America and south Asia,supplying obsolete and hard-to-find components to meet their specific needs.

With the principle of “Quality Parts,Customers Priority,Honest Operation,and Considerate Service”,our business mainly focus on the distribution of electronic components. Line cards we deal with include Microchip,ALPS,ROHM,Xilinx,Pulse,ON,Everlight and Freescale. Main products comprise IC,Modules,Potentiometer,IC Socket,Relay,Connector.Our parts cover such applications as commercial,industrial, and automotives areas.

We are looking forward to setting up business relationship with you and hope to provide you with the best service and solution. Let us make a better world for our industry!

VGA Camera Sensor PICtail™ Plus Daughter Board Information Sheet

Thank you for purchasing a VGA Camera Sensor PICtail Plus Daughter Board. This information sheet provides some important details that will help you successfully use the board as quickly as possible.

Additional information can be accessed at: <http://www.microchip.com>

Basic Requirements

The VGA Camera Sensor PICtail Plus Daughter Board was designed to work with a PICtail™ Plus connector. This connector can be found on many boards including the Explorer 16 Development Board (DM240001) and the Starter Kit I/O Expansion Board (DM320002).

The VGA Camera Sensor PICtail Plus Daughter Board uses an OmniVision Technologies CameraCubeChip™ to receive digital video images. These images are then controlled by the microcontroller via I/O ports. Depending on the desired use, there are eight DATAx jumpers on the daughter board that can be used to switch between I/O lines. There is another jumper (J10) that can be used to switch between using an external clock source or the microcontroller as a clock source for the OmniVision Technologies CameraCubeChip™.

Getting Started

To get started with the VGA Camera Sensor PICtail Plus Daughter Board, follow these steps:

1. Ensure that MPLAB® IDE is installed.
2. Download a project file for the daughter board from the Microchip web site.
3. Power the daughter board.
4. Connect a debugger/programmer.
5. Using MPLAB IDE, open the project that was previously downloaded.
6. Select a debugger/programmer in MPLAB IDE.
7. Click **Build**. This builds the downloaded project.
8. Click **Program all memories**.
9. Click **Run**.

Your VGA Camera Sensor PICtail Plus Daughter Board should now be up and running. To begin viewing the camera sensor image, either online or on an LCD, follow the guide that accompanies the chosen demonstration.
