## : ©hipsmall

Chipsmall Limited consists of a professional team with an average of over 10 year of expertise in the distribution of electronic components. Based in Hongkong, we have already established firm and mutual-benefit business relationships with customers from,Europe,America and south Asia,supplying obsolete and hard-to-find components to meet their specific needs.

With the principle of "Quality Parts,Customers Priority,Honest Operation, and Considerate Service",our business mainly focus on the distribution of electronic components. Line cards we deal with include Microchip,ALPS,ROHM,Xilinx,Pulse,ON,Everlight and Freescale. Main products comprise IC,Modules,Potentiometer,IC Socket,Relay,Connector.Our parts cover such applications as commercial,industrial, and automotives areas.

We are looking forward to setting up business relationship with you and hope to provide you with the best service and solution. Let us make a better world for our industry!

## Data Sheet

## Description

The ACNW3190 contains an AIGaAs LED, which is optically coupled to an integrated circuit with a power output stage. This optocoupler is ideally suited for driving power IGBTs and MOSFETs used in motor control inverter applications. The high operating voltage range of the output stage provides the drive voltages required by gate controlled devices. The voltage and high peak output current supplied by this optocoupler make it ideally suited for direct driving IGBTs with ratings up to $1200 \mathrm{~V} / 200 \mathrm{~A}, 600 \mathrm{~V} / 300 \mathrm{~A}$. For IGBTs with higher ratings, the ACNW3190 can be used to drive a discrete power stage which drives the IGBT gate. The ACNW3190 has the highest insulation voltage of $\mathrm{V}_{\text {IORM }}=1414$ Vpeak in the IEC/ EN/DIN EN 60747-5-5.

## Functional Diagram

## TRUTH TABLE

| LED | $\begin{gathered} V_{\text {CC }}-V_{\text {EE }} \\ \text { "POSITIVE GOING" } \\ \text { (i.e., TURN-ON) } \end{gathered}$ | $V_{\text {CC }}-V_{E E}$ "NEGATIVE GOING" (i.e., TURN-OFF) | V0 |
| :---: | :---: | :---: | :---: |
| OFF | 0-30V | 0-30V | LOW |
| ON | 0-11 V | 0-9.5 V | LOW |
| ON | 11-13.5 V | 9.5-12V | TRANSITION |
| ON | 13.5-30V | 12-30V | HIGH |

A $0.1 \mu \mathrm{~F}$ bypass capacitor must be connected between pins 5 and 8 .

## Features

- 5.0 A Maximum Peak Output Current
- $15 \mathrm{kV} / \mu \mathrm{s}$ Minimum Common Mode Rejection (CMR) at $\mathrm{V}_{\mathrm{CM}}=1500 \mathrm{~V}$
- 0.5 V Maximum Low Level Output Voltage ( $\mathrm{V}_{\mathrm{OL}}$ ) Eliminates Need for Negative Gate Drive
- $I_{C C}=5 \mathrm{~mA}$ Maximum Supply Current
- Under Voltage Lock-Out Protection (UVLO) with Hysteresis
- Wide Operating $\mathrm{V}_{\mathrm{CC}}$ Range: 15 to 30 Volts
- 500 ns Maximum Switching Speeds
- Industrial Temperature Range: $-40^{\circ} \mathrm{C}$ to $100^{\circ} \mathrm{C}$
- Safety Approval

## UL Recognized

5000 V rms for 1 min.
CSA Approval
IEC/EN/DIN EN 60747-5-5 Approved
$\mathrm{V}_{\text {IORM }}=1414 \mathrm{~V}_{\text {peak }}$

## Applications

- IGBT/MOSFET Gate Drive
- AC/Brushless DC Motor Drives
- Industrial Inverters
- Switch Mode Power Supplies

## Ordering Information

ACNW3190 is UL Recognized with 5000Vrms for 1 minute per UL1577.

| Part number | Option RoHS Compliant | Package | Surface <br> Mount | Gull <br> Wing | Tape \& Reel | IEC/EN/DIN EN 60747-5-5 | Quantity |
| :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: |
| ACNW3190 | -000E | 400mil DIP-8 |  |  |  | X | 42 per tube |
|  | -300E |  | X | X |  | X | 42 per tube |
|  | -500E |  | X | X | X | X | 750 per reel |

To order, choose a part number from the part number column and combine with the desired option from the option column to form an order entry.

## Example 1:

ACNW3190-500E to order product of 400mil DIP Gull Wing Surface Mount package in Tape and Reel packaging with IEC/EN/DIN EN 60747-5-5 Safety Approval in RoHS compliant.

## Example 2:

ACNW3190-000E to order product of 400 mil DIP package in tube packaging and RoHS compliant.
Option datasheets are available. Contact your Avago sales representative or authorized distributor for information.

## Package Outline Drawings

## ACNW3190 Outline Drawing (8-pin Wide Body Package)

ACNW3190 Gull Wing Surface Mount Option 300 Outline Drawing

LAND PATTERN RECOMMENDATION

Dimensions in inches (millimeters)

Note:
Floating Lead Protrusion is 0.25 mm ( 10 mils ) max.

## Recommended Pb-Free IR Profile

Recommended reflow condition as per JEDEC Standard, J-STD-020 (latest revision). Non-Halide Flux should be used.

Dependence of Safety Limiting Values on Temperature

Note:
The Thermal Derating Graph above is in relation to Figure 30 and Figure 31 and $S=2 \mathrm{~cm}$.

## Regulatory Information

The ACNW3190 is approved by the following organizations:

## IEC/EN/DIN EN 60747-5-5

Maximum Working Insulation Voltage $\mathrm{V}_{\text {IORM }}=1414 \mathrm{~V}_{\text {PEAK }}$
UL
Approval under UL 1577, component recognition program up to $\mathrm{V}_{\text {ISO }}=5000 \mathrm{~V}_{\text {RMS }}$ expected prior to product release. File E55361.

## CSA

Approval under CSA Component Acceptance Notice \#5, File CA 88324 expected prior to product release.

## Table 1. IEC/EN/DIN EN 60747-5-5 Insulation Characteristics*

| Description | Symbol | Characteristic | Unit |
| :---: | :---: | :---: | :---: |
| Installation classification per DIN VDE 0110/1.89, Table 1 for rated mains voltage $\leq 150 \mathrm{~V}_{\text {rms }}$ for rated mains voltage $\leq 300 \mathrm{~V}_{\text {rms }}$ for rated mains voltage $\leq 450 \mathrm{~V}_{\text {rms }}$ for rated mains voltage $\leq 600 \mathrm{~V}_{\text {rms }}$ for rated mains voltage $\leq 1000 \mathrm{~V}_{\text {rms }}$ |  | $\begin{aligned} & \text { I - IV } \\ & \text { I - IV } \\ & \text { I - IV } \\ & \text { I - IV } \\ & \text { I III } \end{aligned}$ |  |
| Climatic Classification |  | 55/100/21 |  |
| Pollution Degree (DIN VDE 0110/1.89) |  | 2 |  |
| Maximum Working Insulation Voltage | VIORM | 1414 | $V_{\text {peak }}$ |
| Input to Output Test Voltage, Method b** <br> $V_{\text {IORM }} \times 1.875=V_{\text {PR, }}, 100 \%$ Production Test with $t_{m}=1$ sec, Partial discharge $<5 \mathrm{pC}$ | $V_{P R}$ | 2652 | $V_{\text {peak }}$ |
| Input to Output Test Voltage, Method a** <br> $V_{\text {IORM }} \times 1.6=$ VPR, Type and Sample Test, $\mathrm{t}_{\mathrm{m}}=10 \mathrm{sec}$, Partial discharge $<5 \mathrm{pC}$ | $V_{\text {PR }}$ | 2262 | $V_{\text {peak }}$ |
| Highest Allowable Overvoltage (Transient Overvoltage $\mathrm{t}_{\text {ini }}=60 \mathrm{sec}$ ) | $\mathrm{V}_{\text {IOTM }}$ | 8000 | $V_{\text {peak }}$ |
| Safety-limiting values <br> - maximum values allowed in the event of a failure, also see Figure 2. <br> Case Temperature <br> Input Current <br> Output Power | Ts <br> IS, InPUT PS, OUTPUT | $\begin{aligned} & 150 \\ & 400 \\ & 800 \end{aligned}$ | $\begin{gathered} { }^{\circ} \mathrm{C} \\ \mathrm{~mA} \\ \mathrm{~mW} \end{gathered}$ |
| Insulation Resistance at $\mathrm{T}_{5}, \mathrm{~V}_{1 \mathrm{O}}=500 \mathrm{~V}$ | RS | $\geq 10^{9}$ | $\Omega$ |

* Isolation characteristics are guaranteed only within the safety maximum ratings which must be ensured by protective circuits in application. Surface mount classification is class A in accordance with CECCOO802.
** Refer to the optocoupler section of the Isolation and Control Components Designer's Catalog, under Product Safety Regulations section IEC/EN/ DIN EN 60747-5-5, for a detailed description of Method a and Method b partial discharge test profiles.

Table 2. Insulation and Safety Related Specifications

| Parameter | Symbol | ACNW3190 | Units | Conditions |
| :--- | :--- | :--- | :--- | :--- |
| Minimum External Air Gap <br> (Clearance) | $\mathrm{L}(101)$ | 9.6 | mm | Measured from input terminals to output terminals, <br> shortest distance through air. |
| Minimum External Tracking <br> (Creepage) | $\mathrm{L}(102)$ | 10.0 | mm | Measured from input terminals to output terminals, <br> shortest distance path along body. |
| Minimum Internal Plastic Gap <br> (Internal Clearance) | 1.0 | mm | Through insulation distance conductor to conductor, <br> usually the straight line distance thickness between <br> the emitter and detector. |  |
| Tracking Resistance <br> (Comparative Tracking Index) | CTI | $>200$ | V | DIN IEC 112/VDE 0303 Part 1 |
| Isolation Group | IIIa |  | Material Group (DIN VDE 0110, 1/89, Table 1) |  |

Notes:
All Avago data sheets report the creepage and clearance inherent to the optocoupler component itself. These dimensions are needed as a starting point for the equipment designer when determining the circuit insulation requirements. However, once mounted on a printed circuit board, minimum creepage and clearance requirements must be met as specifi ed for individual equipment standards. For creepage, the shortest distance path along the surface of a printed circuit board between the solder fillets of the input and output leads must be considered (the recommended Land Pattern does not necessarily meet the minimum creepage of the device). There are recommended techniques such as grooves and ribs which may be used on a printed circuit board to achieve desired creepage and clearances. Creepage and clearance distances will also change depending on factors such as pollution degree and insulation level.

## Table 3. Absolute Maximum Ratings

| Parameter | Symbol | Min. | Max. | Units | Note |
| :--- | :--- | :--- | :--- | :--- | :--- |
| Storage Temperature | $\mathrm{T}_{\mathrm{S}}$ | -55 | 125 | ${ }^{\circ} \mathrm{C}$ |  |

## Table 7. Package Characteristics

Unless otherwise noted, all typical values are at $\mathrm{T}_{\mathrm{A}}=25^{\circ} \mathrm{C}$; all Minimum/Maximum specifications are at Recommended Operating Conditions.
$\left.\begin{array}{lllllllll}\hline \text { Parameter } & \text { Symbol } & \text { Min. } & \text { Typ. } & \text { Max. } & \text { Units } & \text { Test Conditions } & \text { Fig. } & \text { Note } \\ \hline \begin{array}{l}\text { Input-Output Momentary } \\ \text { Withstand Voltage* }\end{array} & \mathrm{V}_{\mathrm{ISO}} & 5000 & & & \mathrm{~V}_{\mathrm{RMS}}\end{array} \begin{array}{l}\mathrm{RH}<50 \%, \\ \mathrm{t}=1 \mathrm{~min} ., \mathrm{T}_{\mathrm{A}}=25^{\circ} \mathrm{C}\end{array}\right]$

* The Input-Output Momentary Withstand Voltage is a dielectric voltage rating that should not be interpreted as an input-output continuous voltage rating. For the continuous voltage rating, refer to your equipment level safety specification or Avago Technologies Application Note 1074 entitled "Optocoupler Input-Output Endurance Voltage."

## Notes

1. Derate linearly above $70^{\circ} \mathrm{C}$ free-air temperature at a rate of $0.3 \mathrm{~mA} /{ }^{\circ} \mathrm{C}$.
2. Maximum pulse width $=10 \mu$. This value is intended to allow for component tolerances for designs with lo peak minimum $=4.0 \mathrm{~A}$. See $\mathrm{Applica}-$ tions section for additional details on limiting loн peak.
3. Derate linearly above $70^{\circ} \mathrm{C}$ free-air temperature at a rate of $4.8 \mathrm{~mA} /{ }^{\circ} \mathrm{C}$.
4. Derate linearly above $70^{\circ} \mathrm{C}$ free-air temperature at a rate of $5.4 \mathrm{~mA} /{ }^{\circ} \mathrm{C}$.
5. Maximum pulse width $=50 \mu \mathrm{~s}$.
6. In this test $\mathrm{V}_{\mathrm{OH}}$ is measured with a dc load current. When driving capacitive loads $\mathrm{V}_{\mathrm{OH}}$ will approach $\mathrm{V}_{\mathrm{CC}}$ as $\mathrm{l}_{\mathrm{OH}}$ approaches zero amps.
7. Maximum pulse width $=1 \mathrm{~ms}$.
8. In accordance with UL1577, each optocoupler is proof tested by applying an insulation test voltage $\geq 6000$ Vrms for 1 second (leakage detection current limit, $\mathrm{l}_{1-\mathrm{O}} \leq 5 \mu \mathrm{~A}$ ).
9. Device considered a two-terminal device: pins $1,2,3$, and 4 shorted together and pins 5, 6, 7, and 8 shorted together.
10. The difference between tPHL and tpLH between any two ACNW3190 parts under the same test condition.
11. Pins 1 and 4 need to be connected to LED common.
12. Common mode transient immunity in the high state is the maximum tolerable $\mathrm{dVCM} / \mathrm{dt}$ of the common mode pulse, VCM, to assure that the output will remain in the high state (i.e., $\mathrm{V}_{\mathrm{O}}>15.0 \mathrm{~V}$ ).
13. Common mode transient immunity in a low state is the maximum tolerable dVCM/dt of the common mode pulse, VCM, to assure that the output will remain in a low state (i.e., $\mathrm{V}_{\mathrm{O}}<1.0 \mathrm{~V}$ ).
14. This load condition approximates the gate load of a $1200 \mathrm{~V} / 100 \mathrm{~A}$ IGBT.
15. Pulse Width Distortion (PWD) is defined as |tPHL-tPLH| for any given device.

## Application Notes

Figure 25 and 26 show two recommended application circuits. Figure 25 show a single power supply gate driver using the driver's maximum $V_{O L}$ value of 0.5 V . Figure 26 show a dual power supply gate driver circuit which is applicable for higher power IGBT driving due to the existence of higher miller capacitance in these IGBTs.

Figure 25. Recommended LED drive and application circuit
For high side bootstrap driving, note that the bypass capacitor of $0.1 \mu \mathrm{~F}$ in parallel with $10 \mu \mathrm{~F}$ or above to be connected across VCC and VEE is important to deliver high peak output current.

Figure 26. ACNW3190typical application circuit with negative IGBT gate drive

## Selecting the Gate Resistor (Rg) to minimize IGBT Switching Losses.

## Step 1: Calculate Rg Minimum from the $\mathrm{I}_{01}$ Peak Specification

The IGBT and Rg in Figure 26 can be analyzed as a simple RC circuit with a voltage supplied by the ACNW3190. The operating temperature is $100^{\circ} \mathrm{C}$.

$$
\begin{aligned}
\mathrm{Rg} & \geq \frac{\left(\mathrm{V}_{\mathrm{CC}}-\mathrm{V}_{\mathrm{EE}}-\mathrm{V}_{\mathrm{OL}}\right)}{\mathrm{I}_{\text {OLPEAK }}} \\
& =\frac{(15 \mathrm{~V}+5 \mathrm{~V}-3.5 \mathrm{~V})}{4 \mathrm{~A}} \\
& \approx 4.3 \Omega
\end{aligned}
$$

The VOL value of 3.5 V in the previous equation is a conservative value of VOL at the peak current of 4.0 A (see Figure 6). At lower Rg values the voltage supplied by the ACNW3190 is not an ideal voltage step. This results in lower peak currents (more margin) than predicted by this analysis. When negative gate drive is not used, $\mathrm{V}_{\mathrm{EE}}$ in the previous equation is equal to zero volts.

## Step 2: Check the ACNW3190 Power Dissipation and Increase Rg if Necessary.

The ACNW3190 total power dissipation (PT) is equal to the sum of the emitter power ( PE ) and the output power (PO):

$$
\begin{aligned}
\mathrm{P}_{\mathrm{T}} & =\mathrm{P}_{\mathrm{E}}+\mathrm{P}_{\mathrm{O}} \\
\mathrm{P}_{\mathrm{E}} & =\mathrm{I}_{\mathrm{F}}^{*} \mathrm{~V}_{\mathrm{F}} * \text { Duty Cycle } \\
\mathrm{P}_{\mathrm{O}} & =\mathrm{P}_{\mathrm{O}(\mathrm{BIAS})}+\mathrm{P}_{\mathrm{O}}(\text { SWITCHING }) \\
& =\mathrm{I}_{\mathrm{CC}} *\left(\mathrm{~V}_{\mathrm{CC}}-\mathrm{V}_{\mathrm{EE}}\right)+\mathrm{E}_{S W}\left(\mathrm{R}_{\mathrm{G}}, \mathrm{Q}_{\mathrm{G}}\right) * \mathrm{f}
\end{aligned}
$$

For the circuit in Figure 26 with $\mathrm{I}_{\mathrm{F}}$ (worst case) $=16 \mathrm{~mA}$, Rg $=4.3 \Omega$, Max Duty Cycle $=80 \%, \mathrm{Qg}=1000 \mathrm{nC}, \mathrm{f}=15$ kHz and $\mathrm{T}_{\mathrm{A}} \mathrm{max}=85^{\circ} \mathrm{C}$ :

$$
\begin{aligned}
\mathrm{P}_{\mathrm{E}} & =16 \mathrm{~mA} * 1.95 \mathrm{~V} * 0.8=25 \mathrm{~mW} \\
\mathrm{P}_{\mathrm{O}} & =3.25 \mathrm{~mA} * 20 \mathrm{~V}+13 \mu \mathrm{~J}^{*} 15 \mathrm{kHz} \\
& =65 \mathrm{~mW}+195 \mathrm{~mW} \\
& =260 \mathrm{~mW} \\
& <728 \mathrm{~mW}\left(\mathrm{PO}_{(\mathrm{MAX})} @ 85^{\circ} \mathrm{C}=800 \mathrm{~mW}-15 \mathrm{C}^{*} 4.8 \mathrm{~mW} / \mathrm{C}\right)
\end{aligned}
$$

The value of 3.25 mA for ICC in the previous equation was obtained by derating the ICC max of 5 mA to ICC max at 100C (see Figure 7).

The above computation shows that the power dissipation is within the specified limits. However, designers should verify that the thermal limits have not been violated by using the thermal model provided in this datasheet. This thermal model obtained based on JEDEC specification.

| PE Parameter | Description |
| :--- | :--- |
| $\mathrm{I}_{\mathrm{F}}$ | LED Current |
| $\mathrm{V}_{\mathrm{F}}$ | LED On Voltage |
| Duty Cycle | Maximum LED Duty Cycle |

| $P_{0}$ Parameter | Description |
| :--- | :--- |
| $\mathrm{I}_{\mathrm{CC}}$ | Supply Current |
| $\mathrm{V}_{\mathrm{CC}}$ | Positive Supply Voltage |
| $\mathrm{V}_{\mathrm{EE}}$ | Negative Supply Voltage |
| $\mathrm{ESW}_{\mathrm{SW}}(\mathrm{Rg}, \mathrm{Qg})$ | Energy Dissipated in the HCPL-3120 for <br> each IGBT Switching Cycle (See Figure 27) |
| f | Switching Frequency |

Figure 27. Energy dissipated in the ACWN3190 for each IGBT switching cycle

## Under Voltage Lockout Feature

The ACNW3190 contains an under voltage lockout (UVLO) feature that is designed to protect the IGBT under fault conditions which cause the ACNW3190 supply voltage (equivalent to the fully-charged IGBT gate voltage) to drop below a level necessary to keep the IGBT in a low resistance state. When the ACNW3190 output is in the high state and the supply voltage drops below the ACNW3190 VUVLO- threshold ( 9.5 < VUVLO- < 12.0) the optocoupler output will go into the low state with a typical delay, UVLO Turn Off Delay, of $0.6 \mu \mathrm{~s}$. When the ACNW3190 output is in the low state and the supply voltage rises above the ACNW3190 VUVLO+ threshold (11.0 $<\mathrm{V}_{\text {UVLO }}<13.5$ ) the optocoupler output will go into the high state (assumes LED is "ON") with a typical delay, UVLO Turn On Delay of $0.8 \mu \mathrm{~s}$.

## Thermal Model

## Introduction

For application which requires an output gate current more than 2A, adequate PCB pad heat-sink must be provided to dissipate the power loss in the package. Failure to provide proper heat dissipation will potentially damage the gate drive after pro-long usage. This thermal model allows designer to compute the temperature of the LED and detector.

## Definitions

Ө1:Thermal impedance from LED junction to ambient
$\theta 2$ :Thermal impedance from LED to detector (output IC)
日3:Thermal impedance from detector (output IC) junction to ambient

Ambient Temperature: Measured approximately 1.25 cm above the optocoupler, with no forced air.

## Description

This thermal model assumes that an 8-pin single-channel plastic package optocoupler is soldered into a $7.62 \mathrm{~cm} x$ 7.62 cm printed circuit board (PCB). The temperature at the LED and Detector junctions of the optocoupler can be calculated using the equations below.
$\Delta T E A=A 11 * P E+A 12 * P D$
$\Delta T D A=A 21^{*} P E+A 22^{*} P D$
where,
$\Delta T E A=$ Temperature difference between ambient and LED
$\Delta T D A=$ Temperature difference between ambient and detector

PE = Power dissipation from LED
PD = Power dissipation from detector
A11, A12, A21, A22 thermal coefficients (units in ${ }^{\circ} \mathrm{C} / \mathrm{W}$ ) are functions of the thermal impedances $\theta 1, \theta 2, \theta 3$ (See Note 2).

Table 1. Thermal Model-B Coefficient Data (units in ${ }^{\circ} \mathrm{C} / \mathrm{W}$ )

| $\mathbf{S}(\mathrm{cm})$ | A11 | A12, A21 | A22 |
| :--- | :--- | :--- | :--- |
| 1 | 218.9 | 39.31 | 55.3 |
| 2 | 200.6 | 29.8 | 45 |
| 4 | 198 | 23.59 | 41.7 |
|  |  |  |  |
| Jedec Specifications | A11 | A12, A21 | A22 |
| low K board | 254 | 50.3 | 66.8 |
| High K board | 151.2 | 16.72 | 39.06 |
