

Chipsmall Limited consists of a professional team with an average of over 10 year of expertise in the distribution of electronic components. Based in Hongkong, we have already established firm and mutual-benefit business relationships with customers from Europe, America and south Asia, supplying obsolete and hard-to-find components to meet their specific needs.

With the principle of "Quality Parts, Customers Priority, Honest Operation, and Considerate Service", our business mainly focus on the distribution of electronic components. Line cards we deal with include Microchip, ALPS, ROHM, Xilinx, Pulse, ON, Everlight and Freescale. Main products comprise IC, Modules, Potentiometer, IC Socket, Relay, Connector. Our parts cover such applications as commercial, industrial, and automotives areas.

We are looking forward to setting up business relationship with you and hope to provide you with the best service and solution. Let us make a better world for our industry!

ACPL-M71U and ACPL-M72U

Wide Operating Temperature, High Speed, Low Power
Digital Optocouplers with R²Coupler™ Isolation

AVAGO
TECHNOLOGIES

Data Sheet

Description

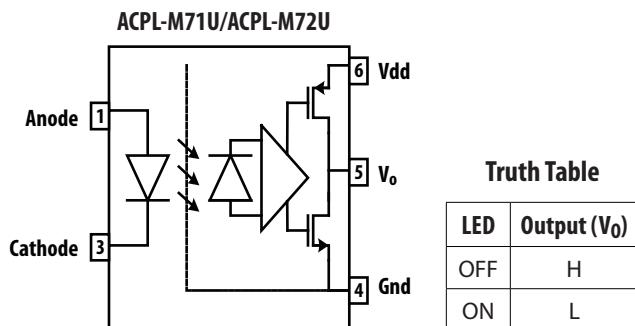

The Avago ACPL-M71U and ACPL-M72U are high temperature, digital CMOS optocouplers in SOIC-5 packages. These optocouplers use the latest CMOS IC technology to achieve outstanding performance and very low power consumption. All devices operate over the -40°C to 125 °C temperature range.

The ACPL-M71U uses a high speed LED, and the ACPL-M72U uses a low current LED for lower power dissipation. The high speed ACPL-M71U featuring a 35 ns maximum propagation delay ($I_F = 10 \text{ mA}$). The ACPL-M72U optocoupler features very low power. With a low 4 mA LED drive current, ACPL-M72U typical propagation delay is 60 ns.

Each digital optocoupler has a CMOS detector IC, an integrated photodiode, a high speed transimpedance amplifier, and a voltage comparator with an output driver.

Avago R²Coupler isolation products provide the reinforced insulation and reliability needed for critical in high temperature industrial applications

Functional Block Diagram

Note: A 0.1 μF bypass capacitor must be connected between pins 4 and 6.

Features

- 5 V CMOS compatible
- Common-Mode Rejection 40kV/ μs @ $V_{CM} = 1000\text{V}$:
- Wide Industrial temperature range: -40°C to 125°C
- Low propagation delay:
 - High Speed ACPL-M71U: 26ns @ $I_F = 10 \text{ mA}$ (Typical)
 - Low Power ACPL-M72U: 60ns @ $I_F = 4 \text{ mA}$ (Typical)
- Worldwide safety approval:
 - UL 1577 recognized, 3750 Vrms / 1 min
 - CSA approved
 - IEC/EN/DIN EN 60747-5-5

Applications

- Industrial CANBus communications interface
- Industrial isolated high speed gate drivers for IGBTs and Power MOSFETs
- High temperature digital signal isolation
- Microcontroller interface
- Digital isolation for A/D and D/A conversion

CAUTION: It is advised that normal static precautions be taken in handling and assembly of this component to prevent damage and/or degradation which may be induced by ESD.

Ordering Information

Option					
Part Number	(RoHS) Compliant	Package	Surface Mount	Tape & Reel	Quantity
ACPL-M71U	-000E	SO-5	X		100 per tube
	-500E		X	X	1500 per reel
ACPL-M72U	-000E	SO-5	X		100 per tube
	-500E		X	X	1500 per reel

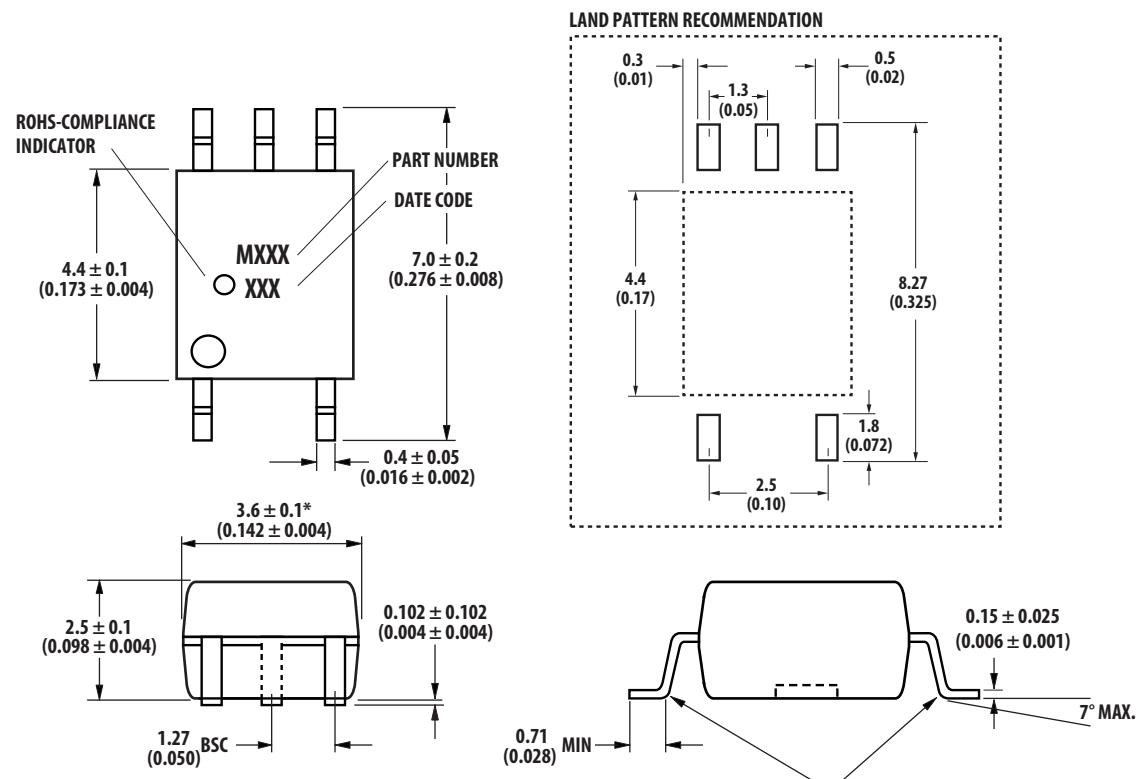

To order, choose a part number from the part number column and combine with the desired option from the option column to form an order entry.

For example, the part number ACPL-M71U-500E describes a device with a surface mount SOIC-5 package; delivered in Tape and Reel with 1500 parts per reel; and full RoHS compliance.

Option datasheets are available. Contact your Avago sales representative or authorized distributor for information.

Package Dimensions

ACPL-M71U / ACPL-M72U (JEDEC MO-155 Package)

Dimensions in millimeters (inches).

Note: Floating Lead Protrusion is 0.15 mm (6 mils) max.

* Maximum Mold flash on each side is 0.15 mm (0.006).

Recommended Pb-Free IR Profile

Recommended reflow condition as per JEDEC Standard, J-STD-020 (latest revision).

Note: Non-halide flux should be used.

Regulatory Information

The ACPL-M71U and ACPL-M72U are approved by the following organizations:

UL

Approved under UL 1577, component recognition program up to $V_{ISO} = 3750 \text{ V}_{RMS}$ expected prior to product release.

CSA

Approved under CSA Component Acceptance Notice #5.

IEC/EN/DIN EN 60747-5-5

Insulation and Safety Related Specifications

Parameter	Symbol	Value	Units	Conditions
Minimum External Air Gap (Clearance)	L(I01)	>5	mm	Measured from input terminals to output terminals, shortest distance through air.
Minimum External Tracking (Creepage)	L(I02)	>5	mm	Measured from input terminals to output terminals, shortest distance path along body.
Minimum Internal Plastic Gap (Internal Clearance)		0.08	mm	Insulation thickness between emitter and detector; also known as distance through insulation.
Tracking Resistance (Comparative Tracking Index)	CTI	>175	Volts	DIN IEC 112/VDE 0303 Part 1
Isolation Group		IIIa		Material Group (DIN VDE 0109)

IEC/EN/DIN EN 60747-5-5 Insulation Related Characteristics

Common Mode Transient Immunity at Logic High Output ^[4]	CM _H	25	40		kV/μs	Using Avago LED Driving Circuit, V _{IN} =0V, R ₁ =350Ω+/-5%, R ₂ =350Ω+/-5%, V _{CM} =1000V, T _A =25°C	15	4
Common Mode Transient Immunity at Logic High Output ^[5]	CM _L	25	40		kV/μs	Using Avago LED Driving Circuit, V _{IN} =4.5-5.5V, R ₁ =350Ω+/-5%, R ₂ =350Ω, V _{CM} =1000V, T _A =25°C	16	5

Package Characteristics

All Typical at T_A = 25°C.

Parameter	Symbol	Min.	Typ.	Max.	Units	Test Conditions
Input-Output Momentary Withstand Voltage	V _{ISO}	3750			V _{rms}	RH ≤ 50%, t = 1 min., T _A = 25°C
Input-Output Resistance	R _{I-O}		10 ¹⁴		Ω	V _{I-O} = 500 V dc
Input-Output Capacitance	C _{I-O}		0.6		pF	f = 1 MHz, T _A = 25°C

Notes:

1. t_{PHL} propagation delay is measured from the 50% (V_{in} or I_f) on the rising edge of the input pulse to 0.8V on the falling edge of the V_O signal. t_{PLH} propagation delay is measured from the 50% (V_{in} or I_f) on the falling edge of the input pulse to the 80% level of the rising edge of the V_O signal.
2. PWD is defined as |t_{PHL} - t_{PLH}|.
3. t_{PSK} is equal to the magnitude of the worst case difference in t_{PHL} and/or t_{PLH} that will be seen between units at any given temperature within the recommended operating conditions.
4. CM_H is the maximum tolerable rate of rise of the common mode voltage to assure that the output will remain in a high logic state.
5. CM_L is the maximum tolerable rate of fall of the common mode voltage to assure that the output will remain in a low logic state.
