## : ©hipsmall

Chipsmall Limited consists of a professional team with an average of over 10 year of expertise in the distribution of electronic components. Based in Hongkong, we have already established firm and mutual-benefit business relationships with customers from,Europe,America and south Asia,supplying obsolete and hard-to-find components to meet their specific needs.

With the principle of "Quality Parts,Customers Priority,Honest Operation, and Considerate Service",our business mainly focus on the distribution of electronic components. Line cards we deal with include Microchip,ALPS,ROHM,Xilinx,Pulse,ON,Everlight and Freescale. Main products comprise IC,Modules,Potentiometer,IC Socket,Relay,Connector.Our parts cover such applications as commercial,industrial, and automotives areas.

We are looking forward to setting up business relationship with you and hope to provide you with the best service and solution. Let us make a better world for our industry!

## Overvoltage protected AC switch

## Datasheet - production data

## Features

- Enables equipment to meet IEC 61000-4-5 surge with overvoltage crowbar technology
- High noise immunity against static dV/dt and IEC 61000-4-4 burst
- High junction temperature: $\mathrm{T}_{\mathrm{j}}=150^{\circ} \mathrm{C}$
- Needs no external over-voltage protection
- $\mathrm{V}_{\mathrm{CL}}$ gives headroom before clamping then crowbar action
- Reduces component count
- ECOPACK ${ }^{\circledR} 2$ compliant component
- Complies with UL standards (File ref: E81734)
- Provides UL certified insulation rated at 2000 V rms

## Applications

- AC static switching in appliances and industrial control systems
- Drive of medium power AC loads such as:
- Coffee making appliances
- Universal drum motor of washing machine
- Compressor of fridge or air conditioner
- Heating and cooking appliances
- Vacuum cleaners
- Solid state relays

## Description

The ACST1635-8FP belongs to the AC power switch range built with A.S.D. ${ }^{\circledR}$ technology. This high performance device is designed for home appliances or industrial systems and drives loads up to 16 A.
This ACST1635-8FP switch embeds a Triac structure with a high voltage crowbar device to absorb the inductive turn-off energy and withstand line surges such as those described in the IEC 61000-4-5 (surge immunity test).

## 2 Application information

### 2.1 Typical application descriptions

The ACST1635-8FP device can be used to control medium power load, such as AC motors in home appliances. Thanks to its thermal and turn off commutation performances, the ACST1635-8FP switch is able to drive an inductive load up to 16 A with no turn off additional snubber. It also provides high thermal performances in static and transient modes such as the compressor inrush current or high torque operating conditions of an AC motor.

Figure 16. AC induction motor control - typical diagram

Figure 17. Universal drum motor control - typical diagram

The ACST1635-8FP device is also very effective in controlling resistive loads.
Figure 18. Resistive load control - typical diagram

### 2.2 AC line transient voltage ruggedness

In comparison with standard Triacs, which needs additional protection components against surge voltage, the ACST1635-8FP is self-protected against overvoltage, specified by the new parameter $\mathrm{V}_{\mathrm{CL}}$. The ACST1635-8FP switch can safely withstand AC line transient voltages either by clamping the low energy spikes, such as the inductive spikes at switch off, or by switching to the on state (for less than 10 ms ) to dissipate higher energy shocks through the load. This safety feature works even with high turn-on current ramp-up.

The test circuit of Figure 19 represents the ACST1635-8FP application, and is used to stress the ACST switch according to the IEC 61000-4-5 standard conditions. With the additional effect of the load which is limiting the current, the ACST switch withstands the voltage spikes up to 2 kV on top of the peak line voltage. The protection is based on an overvoltage crowbar technology. The ACST1635-8FP folds back safely to the on state as shown in Figure 20. The ACST1635-8FP recovers its blocking voltage capability after the surge and the next zero crossing current. Such a non repetitive test can be done at least 10 times on each AC line voltage polarity.

Figure 20. Typical voltage and current waveforms across the ACST1635-8FP during IEC 61000-4-5 standard test

## 3 Package information

- Epoxy meets UL94, V0
- Recommended torque: 0.4 to $0.6 \mathrm{~N} \cdot \mathrm{~m}$

In order to meet environmental requirements, ST offers these devices in different grades of ECOPACK ${ }^{\circledR}$ packages, depending on their level of environmental compliance. ECOPACK ${ }^{\circledR}$ specifications, grade definitions and product status are available at: www.st.com. ECOPACK ${ }^{\circledR}$ is an ST trademark.
