

Chipsmall Limited consists of a professional team with an average of over 10 year of expertise in the distribution of electronic components. Based in Hongkong, we have already established firm and mutual-benefit business relationships with customers from,Europe,America and south Asia,supplying obsolete and hard-to-find components to meet their specific needs.

With the principle of “Quality Parts,Customers Priority,Honest Operation,and Considerate Service”,our business mainly focus on the distribution of electronic components. Line cards we deal with include Microchip,ALPS,ROHM,Xilinx,Pulse,ON,Everlight and Freescale. Main products comprise IC,Modules,Potentiometer,IC Socket,Relay,Connector.Our parts cover such applications as commercial,industrial, and automotives areas.

We are looking forward to setting up business relationship with you and hope to provide you with the best service and solution. Let us make a better world for our industry!

Advanced PMU for Multi-core Application Processors

FEATURES

INTEGRATED POWER SUPPLIES

- Four DC/DC Step-Down (Buck) Regulators
 - 2 x 2.8A, 2 x 1.5A
- Five Low-Noise LDOs
 - 2 x 150mA, 3 x 350mA
- Three Low-Input Voltage LDOs
 - 1 x 150mA, 2 x 350mA
- One Low IQ Keep-Alive LDO
- Backup Battery Charger

SYSTEM CONTROL AND INTERFACE

- Six General Purpose I/O with PWM Drivers
- I²C Serial Interface
- Interrupt Controller

SYSTEM MANAGEMENT

- Reset Interface and Sequencing Controller
 - Power on Reset
 - Soft / Hard Reset
 - Watchdog Supervision
 - Multiple Sleep Modes
- Thermal Management Subsystem

APPLICATIONS

- Tablet PC
- Mobile Internet Devices (MID)
- Ebooks
- Personal Navigation Devices

GENERAL DESCRIPTION

The ACT8847 is a complete, cost effective, and highly-efficient *ActivePMU*[™] power management solution optimized for the power, voltage sequencing and control requirements of Samsung Exynos 4210 (S5PC210/S5PV310) and other application processors. (Please See Ordering Information Section and its Appendix.)

The ACT8847 features four fixed-frequency, current-mode, synchronous PWM step-down converters that achieve peak efficiencies of up to 97%. These regulators operate with a fixed frequency of 2.25MHz, minimizing noise in sensitive applications and allowing the use of small external components. These buck regulators supply up to 2.8A of output current and can fully satisfy the power and control requirements of the multi-core application processor. Dynamic Voltage Scaling (DVS) is supported either by dedicated control pins, or through I2C interface to optimize the energy-per-task performance for the processor. This device also include eight low-noise LDOs (up to 350mA per LDO), one always-ON LDO and an integrated backup battery charger to provide a complete power system for the processor.

The power sequence and reset controller provides power-on reset, SW-initiated reset, and power cycle reset for the processor. It also features the watchdog supervisory function. Multiple sleep modes with autonomous sleep and wake-up sequence control are supported.

The thermal management and protection subsystem allows the host processor to manage the power dissipation of the PMU and the overall system dynamically. The PMU provides a thermal warning to the host processor when the temperature reaches a certain threshold such that the system can turn off some of the non-essential functions, reduce the clock frequency and etc to manage the system temperature.

The ACT8847 is available in a compact, Pb-Free and RoHS-compliant TQFN66-48 package.

- ①: All Active-Semi components are RoHS Compliant and with Pb-free plating unless specified differently. The term Pb-free means semiconductor products that are in compliance with current RoHS (Restriction of Hazardous Substances) standards.
- ②: The Package Code designator “Q” represents QFN.
- ③: The Pin Count designator “M” represents 48 pins.
- ④: “xxx” represents the CMI (Code Matrix Index) option. The CMI identifies the IC’s default register settings.
- ⑤: ACT8847QM174-T is dedicated to S5PV310 application.
- ⑥: ACT8847 Data Sheet is described according to ACT8847QM171-T application; please see the Appendix of ACT8847QM211-T for its specification.
- ⑦: ACT8847QM600-T and ACT8849QM614-T is the association application for Samsung Exynos 4412/ 4212 platforms; please see the Appendix of APP_ACT8847 ACT8849_Rev0_16JUN14_P for its specification.
- ⑧: ACT8847QM502-T is dedicated to Freescale i.MX6 application.
- ⑨: ACT8847QM102-T is dedicated to Freescale i.MX6UL/i.MX6ULL with custom startup and system level considerations

PIN DESCRIPTIONS

PIN	NAME	DESCRIPTION
1, 2	SW3	Switch Node for REG3.
3	GP3	Power Ground for REG3. Connect GP14, GP2, GP3, and GA together at a single point as close to the IC as possible.
4	OUT10	REG10 output. Bypass it to ground with a 2.2µF capacitor.
5	OUT11	REG11 output. Bypass it to ground with a 2.2µF capacitor.
6	INL3	Power input for REG10, REG11 and REG12.
7	OUT12	REG12 output. Bypass it to ground with a 2.2µF capacitor.
8	VSELR2	Output Voltage Selection for REG2. Drive to logic low to select default output voltage. Drive to logic high to select secondary output voltage.
9	nPBSTAT	Active-Low Open-Drain Push-Button Status Output. nPBSTAT is asserted low whenever the nPBIN is pushed, and is high-Z otherwise.
10	GP2	Power ground for REG2. Connect GP14, GP2, GP3, and GA together at a single point as close to the IC as possible.
11, 12	SW2	Switch Node for REG2.
13, 14	VP2	Power input for REG2. Bypass to GP2 with a high quality ceramic capacitor placed as close to the IC as possible.
15	OUT2	Output Voltage Sense for REG2.
16	PWREN	Power enable input.
17	REFBP	Reference Bypass. Connect a 0.047µF ceramic capacitor from REFBP to GA. This pin is discharged to GA in shutdown.
18	INL2	Power Input for REG8, REG9.
19	OUT9	REG9 output. Bypass it to ground with a 2.2µF capacitor.
20	GA	Analog Ground.
21	OUT4	Output voltage sense for REG4.
22	OUT8	REG8 output. Bypass it to ground with a 2.2µF capacitor.
23	SDA	Data Input for I ² C Serial Interface. Data is read on the rising edge of SCL.
24	SCL	Clock Input for I ² C Serial Interface.
25	VP4	Power input for REG4. Bypass to GP14 with a high quality ceramic capacitor placed as close to the IC as possible.
