

Chipsmall Limited consists of a professional team with an average of over 10 year of expertise in the distribution of electronic components. Based in Hongkong, we have already established firm and mutual-benefit business relationships with customers from,Europe,America and south Asia,supplying obsolete and hard-to-find components to meet their specific needs.

With the principle of “Quality Parts,Customers Priority,Honest Operation,and Considerate Service”,our business mainly focus on the distribution of electronic components. Line cards we deal with include Microchip,ALPS,ROHM,Xilinx,Pulse,ON,Everlight and Freescale. Main products comprise IC,Modules,Potentiometer,IC Socket,Relay,Connector.Our parts cover such applications as commercial,industrial, and automotives areas.

We are looking forward to setting up business relationship with you and hope to provide you with the best service and solution. Let us make a better world for our industry!

## **Product Warranty (2 years)**

Advantech warrants to you, the original purchaser, that each of its products will be free from defects in materials and workmanship for two years from the date of purchase.

This warranty does not apply to any products which have been repaired or altered by persons other than repair personnel authorized by Advantech, or which have been subject to misuse, abuse, accident or improper installation. Advantech assumes no liability under the terms of this warranty as a consequence of such events.

Because of Advantech's high quality-control standards and rigorous testing, most of our customers never need to use our repair service. If an Advantech product is defective, it will be repaired or replaced at no charge during the warranty period. For out-of-warranty repairs, you will be billed according to the cost of replacement materials, service time and freight. Please consult your dealer for more details.

If you think you have a defective product, follow these steps:

1. Collect all the information about the problem encountered. (For example, CPU speed, Advantech products used, other hardware and software used, etc.) Note anything abnormal and list any onscreen messages you get when the problem occurs.
2. Call your dealer and describe the problem. Please have your manual, product, and any helpful information readily available.
3. If your product is diagnosed as defective, obtain an RMA (return merchandise authorization) number from your dealer. This allows us to process your return more quickly.
4. Carefully pack the defective product, a fully-completed Repair and Replacement Order Card and a photocopy proof of purchase date (such as your sales receipt) in a shippable container. A product returned without proof of the purchase date is not eligible for warranty service.
5. Write the RMA number visibly on the outside of the package and ship it prepaid to your dealer.

## **Technical Support and Assistance**

Step 1. Visit the Advantech web site at **[www.advantech.com/support](http://www.advantech.com/support)** where you can find the latest information about the product.

Step 2. Contact your distributor, sales representative, or Advantech's customer service center for technical support if you need additional assistance. Please have the following information ready before you call:

- Product name and serial number
- Description of your peripheral attachments
- Description of your software (OS, version, software, etc.)
- A complete description of the problem
- The exact wording of any error messages

# Chapter 1 Understanding Your System

## 1.1 Introduction

ADAM-6000 Ethernet-based data acquisition and control modules provide I/O, data acquisition, and networking in one module to build a cost-effective, distributed monitoring and control solution for a wide variety of applications. Through standard Ethernet networking, ADAM-6000 retrieves I/O values from sensors, and can publish them as a real-time I/O values to networking nodes via LAN, Intranet, or Internet. With Ethernet-enabled technology, ADAM-6000 series modules build up a cost-effective DA&C system for building automation, environmental monitoring, facility management and intelligent manufacturing applications. Please refer to Figure 1-1 for a brief overview of the ADAM-6000 system architecture.

*Figure 1.1: ADAM-6000 System Architecture*

## 1.2 Major Features

---

### 1.2.1 Ethernet-enabled DA&C I/O Modules

ADAM-6000 is based on popular Ethernet networking standards used in most business environments. Users can easily add ADAM-6000 I/O modules to existing Ethernet networks, or use ADAM-6000 modules in new Ethernet-enabled manufacturing networks. ADAM-6000 modules feature a 10/100 Mbps Ethernet chip and support popular industrial Modbus/TCP protocols over TCP/IP for data connection. ADAM-6000 also supports UDP protocol over Ethernet networking. With UDP/IP, ADAM-6000 I/O modules can actively send I/O data streams to 8 Ethernet nodes. Through Ethernet networking, HMI/SCADA systems, and controllers, users can access or gather real-time data from ADAM-6000 Ethernet enabled DA&C modules. This data can then be integrated with business systems to compile valuable business information.

**Note:** Some intelligent functions are only provided by the ADAM-6000-CE version. See details in Appendix F.

### 1.2.2 Intelligent I/O Modules

ADAM-6000 series have pre-built intelligent math functions to empower system capacity. The Digital Input module provide counter, totalizer functions; the Digital Output module provide pulse output, delay output functions; the Analog Input module provide the max./min./average data values and the Analog Output module provide the PID loop control functions.

### 1.2.3 Mixed I/O to Fit All Applications

ADAM-6000 series mixed I/O design provides the most cost-effective I/O for applications. The most common used I/O type for single functions are collected in one module. This design concept not only saves I/O usage and costs, but also speeds up I/O relative operations. For small DA&C system or standalone control units from mid to large scales, ADAM-6000's mixed I/O design can easily adapt to application needs with one or two modules only. With additional embedded control modules, ADAM-6000 can easily create a localized, less complex, and more distributed I/O architecture.

### 1.2.4 Remote Monitoring & Diagnosis

Each ADAM-6000 module features a pre-built I/O module web page to display real-time I/O data values, alarms, and module status thru LAN or Internet. Through any Internet browser, users can monitor real-time I/O

data values and alarms at local or remote sites. The web-enabled monitoring system requires no programming.

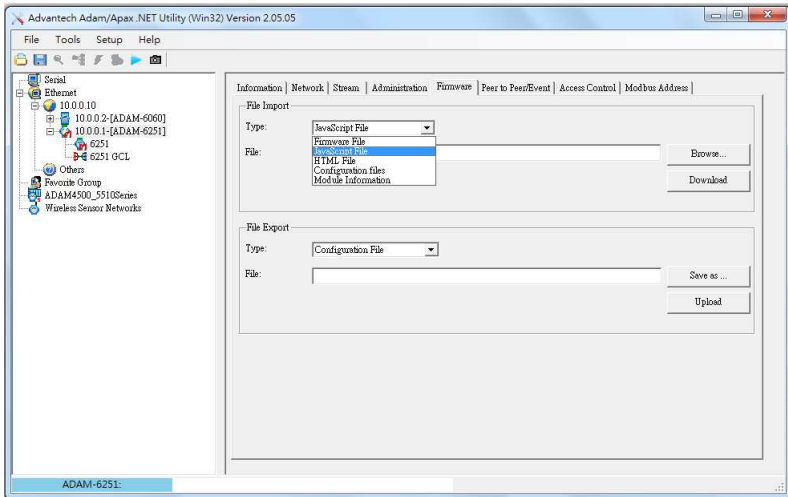

### 1.2.5 Industrial Standard Modbus/TCP Protocol

ADAM-6000 modules support the popular industrial standard, Modbus/TCP protocol, to connect with Ethernet Controller or HMI/SCADA software built with Modbus/TCP drivers. Advantech also provides an OPC server for Modbus/TCP to integrate ADAM-6000 I/O real-time data values with OPC client enabled software, freeing users from driver development.

### 1.2.6 Customized Web Page

Since ADAM-6000 modules have a built in default web page, users can monitor and control the I/O status from anywhere through a browser. Moreover, ADAM-6000 modules can download user-defined web pages for individual applications. Advantech has provided sample programs of JavaScript\* for users reference to design their own operator interface, then download it into the specific ADAM-6000 modules via Windows Utility.

\*ADAM series support JavaScript libraries (\*.js files), users can import this file from the ADAM utility tool. JavaScripting language works with WWW and HTML documents and objects. ADAM provides basic libraries via jQuery v1.8.2 software on the CD package, users can update new versions online from <http://jquery.com/download/>

**Note:** Download the JavaScript file to the ADAM Module via the Adam/Apax Utility

### 1.2.7 Modbus/TCP Software Support

The ADAM-6000s firmware has a built-in Modbus/TCP server. Advantech provides the ADAM.NET class library and Windows ADAM.NET utility for users. Users can configure this DA&C system via Windows utility; integrate with HMI software package via Modbus/TCP driver. Users can also purchase an Advantech OPC server to operate Modbus/TCP.

## 1.3 Specifications

---

<b>Ethernet:</b>	10/100 Base-T
<b>Wiring:</b>	UTP, category 5 or greater
<b>Bus Connection:</b>	RJ45 modular jack
<b>Comm. Protocol:</b>	Modbus/TCP on TCP/IP and UDP
<b>Data Transfer Rate:</b>	Up to 100 Mbps Unregulated 10 to 30 VDC
<b>Status Indicator:</b>	Power, CPU, Communication (Link, Collide, 10/100 Mbps, Tx, Rx)
<b>Case:</b>	PC with captive mounting hardware
<b>Screw Terminal Block:</b>	Accepts wire size #14-28 AWG, stripped length:6.5 mm

**NOTE:** *Equipment will operate below 30% humidity, however, static electricity problems occur much more frequently at lower humidity levels. Make sure you take adequate precautions when you touch the equipment. Consider using ground straps, anti-static floor coverings, etc. if you use the equipment in low humidity environments.*

## 1.4 Dimensions

The following diagram shows the dimensions of the I/O modules. (mm)

**Figure 1.2: ADAM-6000 Module Dimension**

## 1.5 LED Status

There are two LEDs on the ADAM-6000 I/O Series front panel. Each LED has two indicators to represent system status, as explained below:

**Figure 1.3: LED Indicators**

LED	Color		Indication	Behavior
Status	Orange (when status and Link are on at the same time)	Red	Blink	Module is normally running
			ON for 30s	When user enable LOCATE function.
Link		Green	ON	Ethernet is connected.
Speed	Orange (when speed and Com are on at the same time)	Red	ON	Ethernet speed is 100 Mbps
Com		Green	Blink	Module is transmitting or receiving data

## 1.5.1 Locate

This helps user get ADAM module status via LED lights. (Status LED will be constantly on RED or 30 seconds when enabled.)

The diagram illustrates the connection between an ADAM module and a computer via an Ethernet network. The ADAM module is shown with a red circle around its status LED, and the computer monitor has a red circle around a status indicator. Red arrows point from these circles to a legend and a web interface.

**Legend:**

- Status: ■ Link
- Speed: ■ Com

## **Selecting Your Hardware**

Sections include:

- Selecting an I/O Module
- Selecting a Link Terminal & Cable
- Selecting an Operator Interface

# Chapter 2 Selecting Your Hardware

## 2.1 Selecting an I/O Module

---

To organize an ADAM-6000 remote data acquisition & control system, you need to select I/O modules to interface the host PC with field devices or processes that you have previously determined. There are several things should be considered when you select the I/O modules.

- What type of I/O signal is applied in your system?
- How much I/O is required to your system?
- How will you place the modules to handle I/O points in individual areas of an entire field site?
- How many modules are required for distributed I/O point arrangement?
- How many hubs are required for the connection of these devices?
- What is the required voltage range for each I/O module?
- What isolation environment is required for each I/O module?
- What are the noise and distance limitations for each I/O module?

Refer to table 2-1 for I/O module selection guidelines

**Table 2.1: I/O Selection Guidelines**

<b>Type of I/O module:</b>	<b>For these types of field devices or operations (examples):</b>	<b>Explanation:</b>
Discrete input module and block I/O module	Selector switches, push buttons, photoelectric eyes, limit switches, circuit breakers, proximity switches, level switches, motor starter contacts, relay contacts, thumb-wheel switches	Input modules sense ON/OFF or OPENED/CLOSED signals
Discrete output module and block I/O module	Alarms, control relays, fans, lights, horns, valves, motor starters, solenoids	Output module signals interface with ON/OFF or OPENED/CLOSED devices
Analog input module	Thermocouple signals, RTD signals, temperature transducers, pressure transducers, load cell transducers, humidity transducers, flow transducers, potentiometers.	Convert continuous analog signals into input values for host device
Analog output module	Analog valves, actuators, chart recorders, electric motor drives, analog meters	Interpret host device's output to analog signals (generally through transducers) for field devices.

## 2.2 Selecting a Link Terminal & Cable

Use the RJ-45 connector to connect the Ethernet port of the ADAM-6000 to the Hub. The cable for connection should be Category 3 (for 10Mbps data rate) or Category 5 (for 100Mbps data rate) UTP/STP cable, which is compliant with EIA/TIA 586 specifications. Maximum length between the Hub and any ADAM-6000 modules is up to 100 meters (approx. 300 ft).

*Figure 2.1: Ethernet Terminal and Cable Connection*

**Table 2.2: Ethernet RJ-45 port Pin Assignment**

PIN NUMBER	SIGNAL	FUNCTION
1	RD+	Receive (+)
2	RD-	Receive (-)
3	TD+	Transmit (+)
4	(Not Used)	-
5	(Not Used)	-
6	TD-	Transmit (-)
7	(Not Used)	-
8	(Not Used)	-

## 2.3 Selecting an Operator Interface

---

To complete your Data Acquisition and Control system, selecting the operator interface is necessary. Adopting the Modbus/TCP Protocol, ADAM-6000 I/O modules exhibit high ability in system integration for various applications.

You can read the real-time status of ADAM-6000 modules through the web page from the following browser.

- Microsoft Internet Explorer (version 9 or later)
- Google Chrome (version 30 or later)
- Safari (version 6 or later)
- Firefox (version 25 or later)

If you want to integrate ADAM-6000 I/O with HMI (Human Machine Interface) software in a SCADA (Supervisory Control and Data Acquisition) system, there are a lot of HMI software packages, which support Modbus/TCP driver.

- Advantech PM Designer
- Wonderware InTouch
- Any other software that supports the Modbus/TCP protocol

You can also purchase Advantech OPC Server, the easiest-to-use data exchange tool in the world. Any HMI software designed with OPC Client is able to access ADAM-6000 I/O modules.

- Modbus/TCP OPC Server

If you want to develop your own applications, the ADAM.NET Class Library will be the best tool to build up users' operator interface.

With these ready-to-go application software packages, tasks such as remote data acquisition, process control, historical trending and data analysis require only a few keystrokes.

# CHAPTER 3

## **Hardware Installation Guide**

Sections include:

- Determining the Proper Environment
- Mounting
- Wiring & Connections
