

Chipsmall Limited consists of a professional team with an average of over 10 year of expertise in the distribution of electronic components. Based in Hongkong, we have already established firm and mutual-benefit business relationships with customers from,Europe,America and south Asia,supplying obsolete and hard-to-find components to meet their specific needs.

With the principle of “Quality Parts,Customers Priority,Honest Operation,and Considerate Service”,our business mainly focus on the distribution of electronic components. Line cards we deal with include Microchip,ALPS,ROHM,Xilinx,Pulse,ON,Everlight and Freescale. Main products comprise IC,Modules,Potentiometer,IC Socket,Relay,Connector.Our parts cover such applications as commercial,industrial, and automotives areas.

We are looking forward to setting up business relationship with you and hope to provide you with the best service and solution. Let us make a better world for our industry!

**FEATURES****Driver**

- 3-level driver with high-Z mode and built-in clamps**
- Precision trimmed output resistance**
- Low leakage mode (typically <10 nA)**
- Voltage range: up to -2.0 V to +6.0 V**
- 1.6 ns minimum pulse width, 2 V terminated**
- 2.1 ns minimum pulse width, 3 V terminated**

**Comparator**

- Window and differential comparator**
- 500 MHz input equivalent bandwidth**

**Load**

- ±12 mA maximum current capability**

**Per pin PMU**

- Force voltage range: up to -2.0 V to +6.0 V**
- 5 current ranges: 32 mA, 2 mA, 200 µA, 20 µA, 2 µA**

**Levels**

- 14-bit DAC for DCL levels**
- Typically < ±5 mV INL (calibrated)**
- 16-bit DAC for PMU levels**
- Typically < ±1.5 mV INL (calibrated) linearity in FV mode**

**HVOUT output buffer**

- 0 V to 13.5 V output range**
- 100-lead, 14 mm × 14 mm, TQFP\_EP package**
- 900 mW per channel with no load**

**APPLICATIONS**

- Automatic test equipment**
- Semiconductor test systems**
- Board test systems**
- Instrumentation and characterization equipment**

**GENERAL DESCRIPTION**

The ADATE305 is a complete, single-chip solution that performs the pin electronic functions of the driver, the comparator, and the active load (DCL), per pin PMU, and dc levels for ATE applications. The device also contains an HVOUT driver with a VHH buffer capable of generating up to 13.5 V.

The driver features three active states: data high mode, data low mode, and term mode, as well as an inhibit state. The inhibit state, in conjunction with the integrated dynamic clamp, facilitates the implementation of a high speed active termination. The ADATE305 supports two output voltage ranges: -2.0 V to +6.0 V and -1.5 V to +6.0 V by adjusting the positive and negative supply voltages.

The ADATE305 can be used as either a dual single-ended drive/receive channel or a single differential drive/receive channel. Each channel of the ADATE305 features a high speed window comparator per pin for functional testing, as well as a per pin PMU with FV, or FI and MV, or MI functions. All necessary dc levels for DCL functions are generated by on-chip 14-bit DACs. The per pin PMU features an on-chip 16-bit DAC for high accuracy and contains integrated range resistors to minimize external component counts.

The ADATE305 uses a serial bus to program all functional blocks and has an on-board temperature sensor for monitoring the device temperature.

## SPECIFICATIONS

Characterization and production tests performed using Power Supply Range 1 (see Table 36).  $V_{DD} = +10.0\text{ V}$ ,  $V_{CC} = +3.3\text{ V}$ ,  $V_{SS} = -5.25\text{ V}$ ,  $V_{PLUS} = +16.75\text{ V}$ ,  $V_{COMP\_VTT} = +3.3\text{ V}$ ,  $V_{REF} = +5.0\text{ V}$ ,  $V_{REF\_GND} = 0.0\text{ V}$ . All default test conditions are as defined in Table 38. All specified values are at  $T_j = 70^\circ\text{C}$ , where  $T_j$  corresponds to the internal temperature sensor, unless otherwise noted. Temperature coefficients are measured at  $T_j = 70^\circ\text{C} \pm 20^\circ\text{C}$ , unless otherwise noted. Typical values are based on design, simulation analyses, and/or limited bench evaluations. Typical values are not tested or guaranteed. Test levels are specified in the Explanation of Test Levels section.

Stresses above those listed under Absolute Maximum Ratings may cause permanent damage to the device. This is a stress rating only; functional operation of the device at these or any other conditions above those indicated in the operational section of this specification is not implied. Exposure to absolute maximum rating conditions for extended periods may affect device reliability.

## ESD CAUTION

**ESD (electrostatic discharge) sensitive device.** Charged devices and circuit boards can discharge without detection. Although this product features patented or proprietary protection circuitry, damage may occur on devices subjected to high energy ESD. Therefore, proper ESD precautions should be taken to avoid performance degradation or loss of functionality.
