

Chipsmall Limited consists of a professional team with an average of over 10 year of expertise in the distribution of electronic components. Based in Hongkong, we have already established firm and mutual-benefit business relationships with customers from Europe, America and south Asia, supplying obsolete and hard-to-find components to meet their specific needs.

With the principle of "Quality Parts, Customers Priority, Honest Operation, and Considerate Service", our business mainly focus on the distribution of electronic components. Line cards we deal with include Microchip, ALPS, ROHM, Xilinx, Pulse, ON, Everlight and Freescale. Main products comprise IC, Modules, Potentiometer, IC Socket, Relay, Connector. Our parts cover such applications as commercial, industrial, and automotives areas.

We are looking forward to setting up business relationship with you and hope to provide you with the best service and solution. Let us make a better world for our industry!

ADG1308/ADG1309

FEATURES

- 33 V supply range**
- 130 Ω on resistance**
- Fully specified at ±15 V/+12 V**
- 3 V logic-compatible inputs**
- Rail-to-rail operation**
- Break-before-make switching action**
- 16-lead TSSOP and 16-lead SOIC_N**
- Upgrade for the ADG508A/ADG509A**

APPLICATIONS

- Audio and video routing**
- Test equipment**
- Data acquisition systems**
- Battery-powered systems**
- Communication systems**
- Signal routing**

GENERAL DESCRIPTION

The ADG1308 and ADG1309 are monolithic analog multiplexers consisting of eight single channels and four differential channels, respectively. The ADG1308 switches one of eight inputs to a common output as determined by the 3-bit binary address lines A0, A1, and A2. The ADG1309 switches one of four differential inputs to a common differential output as determined by the 2-bit binary address lines A0 and A1. An EN input on both devices is used to enable or disable the device. When disabled, all channels are switched off.

When the switches are on, each switch conducts equally well in both directions and has an input signal range that extends to the power supplies. In the off condition, signal levels up to the supplies are blocked. All switches exhibit break-before-make switching action for use in multiplexer applications. Inherent in the design is the low charge injection for minimum transients when switching the digital inputs.

FUNCTIONAL BLOCK DIAGRAMS

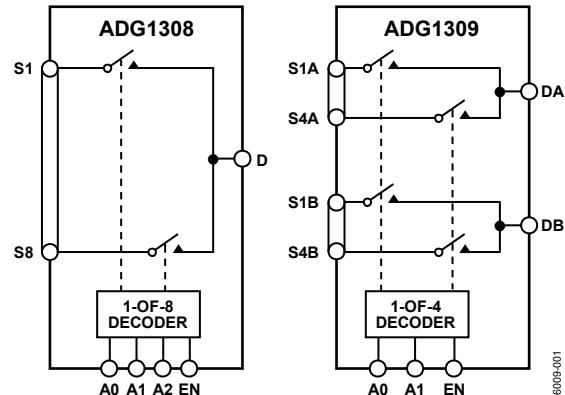

Figure 1.

0609-001

Fast switching speed coupled with high signal bandwidth makes the parts suitable for video signal switching. CMOS construction ensures ultra low power dissipation, making the parts ideally suited for portable and battery-powered instruments.

PRODUCT HIGHLIGHTS

1. 16-lead TSSOP and 16-lead SOIC_N available.
2. Pin compatible with the ADG508AKR and the ADG509AKR devices.
3. 3 V, logic-compatible digital input where:
 $V_{IH} = 2.0 \text{ V}$ and $V_{IL} = 0.8 \text{ V}$.
4. V_L logic power supply not required.
5. Low power consumption.

¹ Temperature range for the B version is -40°C to $+105^\circ\text{C}$.

² Guaranteed by design; not subject to production test.

ADG1308/ADG1309

ABSOLUTE MAXIMUM RATINGS

T_A = 25°C, unless otherwise noted.

Table 3.

Parameter	Rating
V _{DD} to V _{SS}	35 V
V _{DD} to GND	-0.3 V to +25 V
V _{SS} to GND	+0.3 V to -25 V
Analog, Digital Inputs ¹	V _{SS} – 0.3 V to V _{DD} + 0.3 V or 30 mA (whichever occurs first)
Continuous Current, S or D pins	30 mA
Peak Current, S or D pins (Pulsed at 1 ms, 10% Duty Cycle Maximum)	100 mA
Operating Temperature Range Industrial (B Version)	-40°C to +105°C
Storage Temperature Range	-65°C to +150°C
Junction Temperature	150°C
TSSOP, θ _{JA} , Thermal Impedance	112°C/W
16-Lead SOIC, θ _{JA} , Thermal Impedance	77°C/W
Reflow Soldering Peak Temperature (Pb-free)	260 (+0/-5)°C

Stresses above those listed under Absolute Maximum Ratings may cause permanent damage to the device. This is a stress rating only; functional operation of the device at these or any other conditions above those indicated in the operational section of this specification is not implied. Exposure to absolute maximum rating conditions for extended periods may affect device reliability.

¹ Overvoltages at A, EN, S, or D pins are clamped by internal diodes. Current should be limited to the maximum ratings provided.

ESD CAUTION

ESD (electrostatic discharge) sensitive device. Electrostatic charges as high as 4000 V readily accumulate on the human body and test equipment and can discharge without detection. Although this product features proprietary ESD protection circuitry, permanent damage may occur on devices subjected to high energy electrostatic discharges. Therefore, proper ESD precautions are recommended to avoid performance degradation or loss of functionality.

PIN CONFIGURATIONS AND FUNCTION DESCRIPTIONS

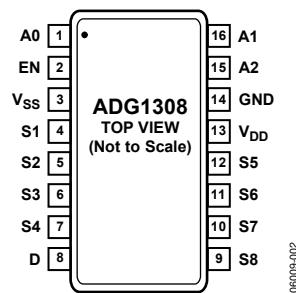

Figure 2. ADG1308 Pin Configuration (TSSOP and SOIC_N)

Table 4. ADG1308 Pin Function Descriptions

Pin Number	Mnemonic	Description
1	A0	Logic Control Input A0.
2	EN	Active High Digital Input. When low, the device is disabled and all switches are off. When high, Ax logic inputs determine on switches.
3	V _{ss}	Most Negative Power Supply Potential. In single supply applications, this pin can be connected to ground.
4	S1	Source Terminal 1. Can be an input or an output.
5	S2	Source Terminal 2. Can be an input or an output.
6	S3	Source Terminal 3. Can be an input or an output.
7	S4	Source Terminal 4. Can be an input or an output.
8	D	Drain Terminal. Can be an input or an output.
9	S8	Source Terminal 8. Can be an input or an output.
10	S7	Source Terminal 7. Can be an input or an output.
11	S6	Source Terminal 6. Can be an input or an output.
12	S5	Source Terminal 5. Can be an input or an output.
13	V _{dd}	Most Positive Power Supply Potential.
14	GND	Ground (0 V) Reference.
15	A2	Logic Control Input A2.
16	A1	Logic Control Input A1.

TERMINOLOGY

R_{ON}

Ohmic resistance between D and S.

ΔR_{ON}

Difference between the R_{ON} of any two channels.

I_S (Off)

Source leakage current when the switch is off.

I_D (Off)

Drain leakage current when the switch is off.

I_D, I_S (On)

Channel leakage current when the switch is on.

V_D (V_S)

Analog voltage on Terminal D and Terminal S.

C_S (Off)

Channel input capacitance for off condition.

C_D (Off)

Channel output capacitance for off condition.

C_D, C_S (On)

On switch capacitance.

C_{IN}

Digital input capacitance.

t_{ON} (EN)

Delay time between the 50% and 90% points of the digital input and switch on condition.

t_{OFF} (EN)

Delay time between the 50% and 90% points of the digital input and switch off condition.

t_{TRANSITION}

Delay time between the 50% and 90% points of the digital inputs and the switch on condition when switching from one address state to another.

T_{BBM}

Off time measured between the 80% point of both switches when switching from one address state to another.

V_{INL}

Maximum input voltage for Logic 0.

V_{INH}

Minimum input voltage for Logic 1.

I_{INL} (I_{INH})

Input current of the digital input.

I_{DD}

Positive supply current.

I_{SS}

Negative supply current.

Off Isolation

A measure of unwanted signal coupling through an off channel.

Charge Injection

A measure of the glitch impulse transferred from the digital input to the analog output during switching.

Bandwidth

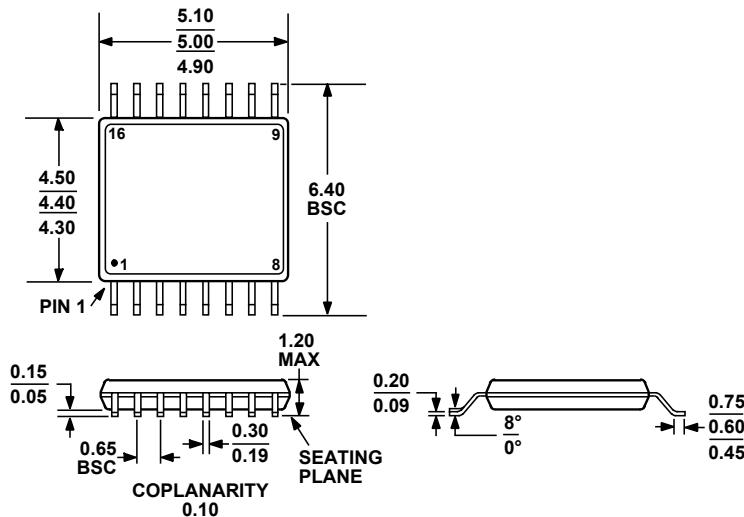

The frequency at which the output is attenuated by 3 dB.

On Response

The frequency response of the on switch.
