

Chipsmall Limited consists of a professional team with an average of over 10 year of expertise in the distribution of electronic components. Based in Hongkong, we have already established firm and mutual-benefit business relationships with customers from,Europe,America and south Asia,supplying obsolete and hard-to-find components to meet their specific needs.

With the principle of “Quality Parts,Customers Priority,Honest Operation,and Considerate Service”,our business mainly focus on the distribution of electronic components. Line cards we deal with include Microchip,ALPS,ROHM,Xilinx,Pulse,ON,Everlight and Freescale. Main products comprise IC,Modules,Potentiometer,IC Socket,Relay,Connector.Our parts cover such applications as commercial,industrial, and automotives areas.

We are looking forward to setting up business relationship with you and hope to provide you with the best service and solution. Let us make a better world for our industry!

AEDT-981x

High Temperature 115°C, High Resolution,
Three Channels Optical Incremental Encoder Modules

Data Sheet

Description

Avago Technologies' AEDT-981x encoders are industrial grade high temperature (-40 to 115°C) rating three channel optical incremental encoder modules building on the Avago legacy HEDS-9140 series.

Using an Avago developed opto ASIC with the built-in Interpolator circuit, AEDT-981x encoders enable wide resolution range from 2000 to 5000 count per revolution with the rotary codewheel of 11mm optical radius, offering a high resolution yet compact solution.

With the opto-ASIC's built-in automatic LED brightness regulation technique, the encoder current consumption can be significantly lowered (Typ. Icc: 20mA) while maintaining optimal encoder performance across spatial corners. This LED brightness control feature also enables optimal LED current control hence LED life can significantly be prolonged.

With the state of the art opto-mechanical design, AEDT-981x offers excellent spatial play of $\varnothing 0.40\text{mm}$ and code wheel gap range of $\pm 150\mu\text{m}$. This allows great flexibility and ease of installation to the user.

Inheriting the indefeasible integrity in product robustness, repeatability and reliability, AEDT-981x series are designed for wide market employment withstanding wide application requirement and environment demand.

Features

- -40°C to 115°C Operating Temperature
- Two Channel Quadrature Output with Index Pulse
- Single ended output with $\pm 5\text{mA}$ output sink/source current per channel
- Suitable for Industrial Applications
- Resolution up to 5000 Counts per Revolution
- Low Power Consumption (Typical Icc: 20 mA)
- No Signal Adjustment Required
- Pin Compatible to legacy HEDS-9xxx Series
- Spatial play tolerance of $\varnothing 0.40\text{mm}$
- Allows motor shaft axial play of $\pm 0.15\text{mm}$
- ESD Immunity HBM 4kV (JESD22-A114D)

Applications

The AEDT-981x series provide high temperature motion control detection with ease of installation, making them suitable for wide range of commercial & industrial applications.

Note: Avago Technologies encoders are not recommended for use in safety critical applications. Eg. ABS braking systems, power steering, life support systems and critical care medical equipment. Please contact sales representative if more clarification is needed.

CAUTION: It is advised that normal static precautions be taken in handling and assembly of this component to prevent damage and/or degradation which may be induced by ESD.

Package Dimensions

Figure 1b.

Mounting Considerations with Aligning Pin

The AEDT-981X can be mounted using fixed aligning pins on the motor base. For this configuration, Side A or B can be used as the mounting plane as shown.

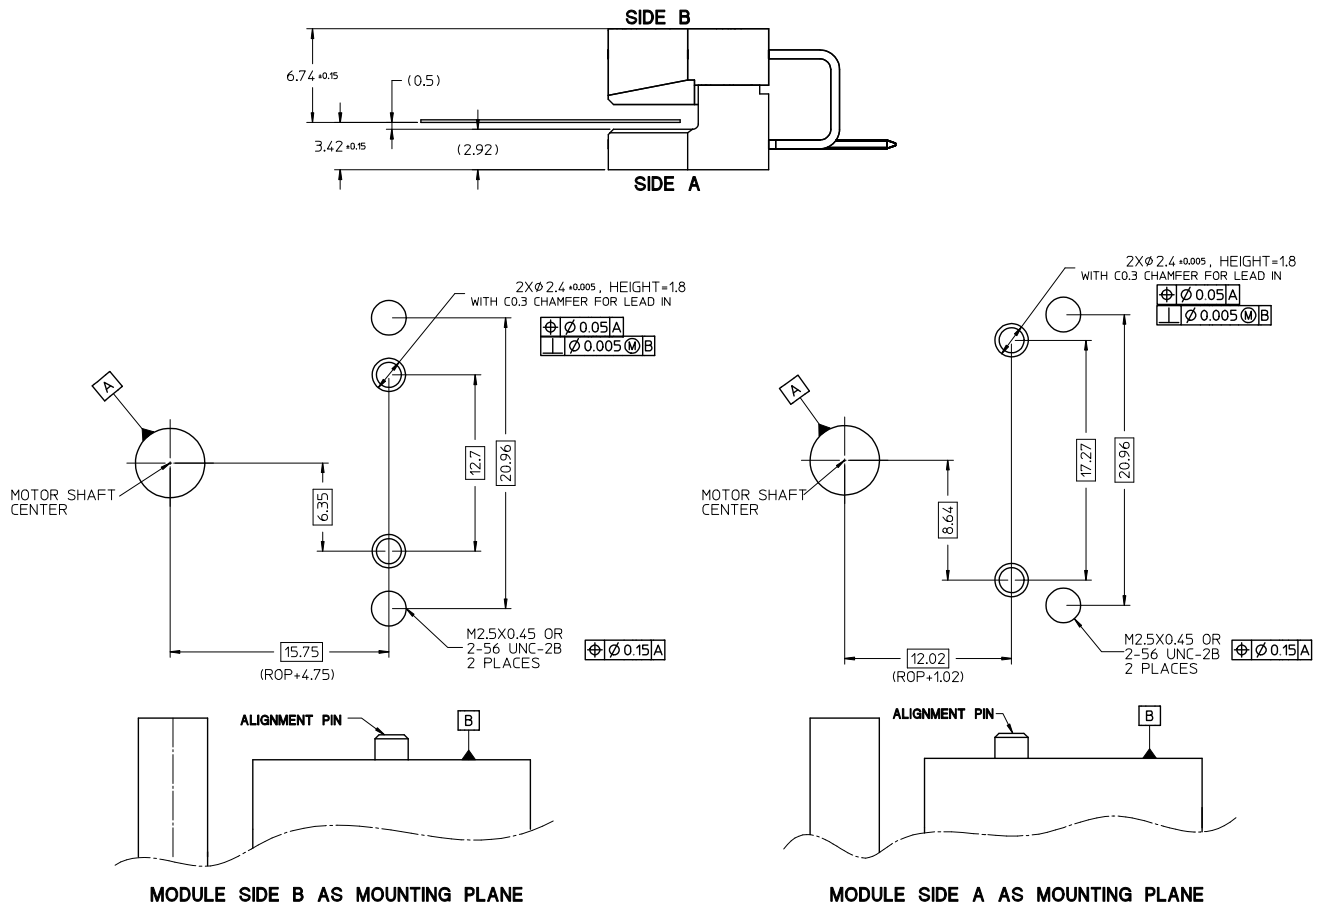

Figure 2.

Orientation of Artwork for Codewheels

The Index area on the AEDT-981X series encoder modules has a nonsymmetrical pattern as does the mating Codewheel. In order for the Index to operate, the “Rightreading” side of the Codewheel disk (the “Artwork Side”) must point toward “Side A” of the Module (the side with the connecting pins).

Because the Encoder Module may be used with either “Side A” or with “Side B” toward the mounting surface, care must be taken to orientate the code wheel artwork side according to Figure below.

Definitions

Count (N): The number of bar and window pairs or counts per revolution (CPR) of the codewheel

One Cycle (C): 360 electrical degrees ($^{\circ}$ e), 1 bar and window pair

One Shaft Rotation: 360 mechanical degrees, N cycles

Position Error ($\Delta\theta$): The normalized angular difference between the actual shaft position and the position indicated by the encoder cycle count

Cycle Error (ΔC): An indication of cycle uniformity. The difference between an observed shaft angle which gives rise to one electrical cycle, and the nominal angular increment of $1/N$ of a revolution

Pulse Width (P): The number of electrical degrees that an output is high during 1 cycle. This value is nominally 180° e or $1/2$ cycle

Pulse Width Error (ΔP): The deviation, in electrical degrees, of the pulse width from its ideal value of 180° e

State Width (S): The number of electrical degrees between a transition in the output of channel A and the neighboring transition in the output of channel B. There are 4 states per cycle, each nominally 90° e.

State Width Error (ΔS): The deviation, in electrical degrees, of each state width from its ideal value of 90° e.

Phase (ϕ): The number of electrical degrees between the center of the high state of channel A and the center of the high state of channel B. This value is nominally 90° e for quadrature output.

Phase Error ($\Delta\phi$): The deviation of the phase from its ideal value of 90° e.

Direction of Rotation: When the codewheel rotates in the direction of the arrow on top of the module, channel A will lead channel B. If the codewheel rotates in the opposite direction, channel B will lead channel A.

Optical Radius (R_{OP}): The distance from the codewheel's center of rotation to the optical center (O.C.) of the encoder module.

Index Pulse Width (P_0): The number of electrical degrees that an index is high during one full shaft rotation. This value is nominally 90° e or $1/4$ cycle.

Absolute Maximum Ratings

Parameter	Symbol	Minimum	Maximum	Units
Storage Temperature	T _S	-40	125	°C
Operating Temperature	T _A	-40	115	°C
Supply Voltage	V _{CC}	-0.5	7	V
Output Voltage	V _O	-0.5	V _{CC}	V
Output Current per Channel	I _{OUT}		±5	mA
Velocity			12,000**	RPM

Note **: Velocity 12000 RPM applies to 5000 Count per Revolution

Recommended Operating Conditions

Parameter	Symbol	Min.	Typ.	Max.	Units	Notes
Temperature	T _A	-40		115	°C	
Supply Voltage	V _{CC}	4.5	5.0	5.5	Volt	Ripple < 100 mVp-p
Load Capacitance	C _L			100	pF	
Output Frequency	f			500	kHz	2000 – 2500 CPR
				1,000	kHz	4000 – 5000 CPR
Shaft Perpendicularity Plus Axial Displacement				± 0.15 (± 0.006)	mm (in.)	
Spatial play (including shaft eccentricity)				Ø0.40 (0.016)	mm (in.)	

Encoding Characteristics

Encoding characteristics are applicable per the Recommended Operating Conditions, unless otherwise specified. Values are for the worst case error over the full rotation.

Encoder Resolution ≥ 4000 CPR

Parameter	Symbol	Min	Typ.*	Max	Units
Pulse Width Error	ΔP		21	45	°e
Logic State Width Error	ΔS		17	45	°e
Phase Error	Δφ		12	25	°e
Cycle Error	ΔC		36	60	°e
Index Pulse Width	P ₀	65	90	115	°e

Encoder Resolution ≤ 2500 CPR

Parameter	Symbol	Min	Typ.*	Max	Units
Pulse Width Error	ΔP		20	30	°e
Logic State Width Error	ΔS		15	25	°e
Phase Error	Δφ		10	15	°e
Cycle Error	ΔC		17	30	°e
Index Pulse Width	P ₀	72	90	108	°e

* Typical values specified at V_{CC} = 5.0V and 25°C and for single ended, unless otherwise stated

Electrical Characteristics

Electrical Characteristics over Recommended Operating Range

Parameter	Symbol	Min.	Typ.*	Max.	Units	Notes
Supply Current	I_{CC}		20	80	mA	No load
High Level Output Voltage	V_{OH}	2.4			V	$I_{OH} = -5 \text{ mA}$
Low Level Output Voltage	V_{OL}			0.4	V	$I_{OL} = 5 \text{ mA}$
Rise Time	t_r		10		ns	$C_L = 100 \text{ pF}$ at $\pm 5 \text{ mA}$
Fall Time	t_f		10		ns	$C_L = 100 \text{ pF}$ at $\pm 5 \text{ mA}$

*Typical values specified at $V_{CC} = 5.0 \text{ V}$, 25°C and nominal sensor position.

Electrical Interface

The AEDT-918x Series encoders output circuitry are designed with high speed and high drivability sink/source output of $\pm 5 \text{ mA}$ without the need of pull up resistors. The high drivability offers rail to rail V_{OH} and V_{OL} , giving the end customer better noise margin in signal processing hence more reliable in industrial application.
